

Supplemental Figure 1.

Supplementary Figure S1 Representative Western blots of PK-resistant PrP^{Sc} in the brains of the mice infected with scrapie agents 139A, ME7 or S15. Here, 10% various brain homogenates treated with 50 mg/mL PK (PK+) or without PK (PK-) were separated with 15% SDS-PAGE and blotted with PrP-specific monoclonal antibody 6H4¹². The molecular markers are shown on the left.
