

Supplementary Fig.2. Inhibition of tumor growth by combining soluble PDGFR ̢-IgG and PDGFR ̢-IgG.

G5 tumor-bearing animals were treated with intratumoral injection of Av-LacZ, Av-PDGFR ̢-IgG, Av-PDGFR ̢-IgG or Av-PDGFR ̢-IgG and Av-PDGFR ̢-IgG combined, each at 5×10^8 pfu, once weekly. Tumor weight was determined three weeks post tumor cell inoculation.
