

Supplementary Figure 3

Supplementary Figure 3. Seven days after subcutaneous DMS79 injection into 24 immunodeficient male mice, R-roscovitine was administered by oral gavage (twice/day for 17 days). Tumor extracted hPOMC mRNA ($P < 0.01$), plasma ACTH (pre Tx $P=0.49$, post Tx $P = 0.041$), and plasma corticosterone (pre Tx $P = 0.84$, post Tx $P = 0.036$) were suppressed compared to untreated age- and weight-matched control mice.
