

**Figure S2: Comparison of *bla*<sub>KPC-4</sub> harboring plasmid from BK34998.**

The light-blue shading denotes regions of IncA/C plasmid backbone shared among three plasmids, pRA1, p34998-E, and p35734-C. Light-gray shading denotes region of homology surrounding *bla*<sub>KPC-4</sub> from an IncN plasmid pBK31551. ORFs are symbolized by arrows and colored based on the predicted gene function (see key, top right).
