

Figure S3. Efficient p150CAF-1 knockdown using siRNA in 3T3 cells.

A) 3T3 cells Knocked-down for p150CAF-1. SiRNA treated cells with control (si cont, top) or siRNA against p150 (si p150, bottom), and stained with DAPI (left) and p150 (right). Scale bar is 10 mm.

B) Loss of p150CAF-1 leads to accumulation in S-phase. FACS analysis of 3T3cells transfected with siRNA control (si cont, left) or siRNA against p150 (si p150, right).
