

Long noncoding RNA GAPLINC promotes invasion in colorectal cancer by targeting SNAI2 through binding with PSF and NONO

SUPPLEMENTARY FIGURE AND TABLES

Supplementary Figure S1: Hierarchical clustering showing the differentially expressed lncRNAs and mRNAs in MLNs versus NLNs. Red indicates an increase and blue indicates low relative expression. Data represent mean \pm standard deviation from three independent experiments. * $P < 0.05$, ** $P < 0.01$.
