

Supplementary Data

SUPPLEMENTARY FIG. S1. Absolute static functional connectivity shows a strong relationship with the mean of absolute dFC time series following different variance-stabilizing transformations. Each point shows an edge averaged over all subjects. Each panel shows the static functional connectivity versus (A) the raw dynamic functional connectivity time series; (B) Fisher-transformed connectivity values; (C) Box–Cox transformed; (D) Fisher followed by the Box–Cox transformation. dFC, dynamic functional connectivity.
