

Supplemental Figure S1: DSP-4 treatment attenuates norepinephrine release in the anteroventral thalamus (AV). (a) Representative color plots demonstrating norepinephrine release in the AV after 1 s electrical stimulations (red bar) of the ipsilateral DNB in control and DSP-4 treated rats. (b) Maximal norepinephrine release (NE_{max}) in the AV following ipsilateral DNB stimulations in control and DSP-4 treated rats. Average \pm SEM with individual experiments overlaid. *, $P < 0.05$, unpaired T-test.
