

## Extracellular vesicles secreted by highly metastatic clonal variants of osteosarcoma preferentially localize to the lungs and induce metastatic behaviour in poorly metastatic clones

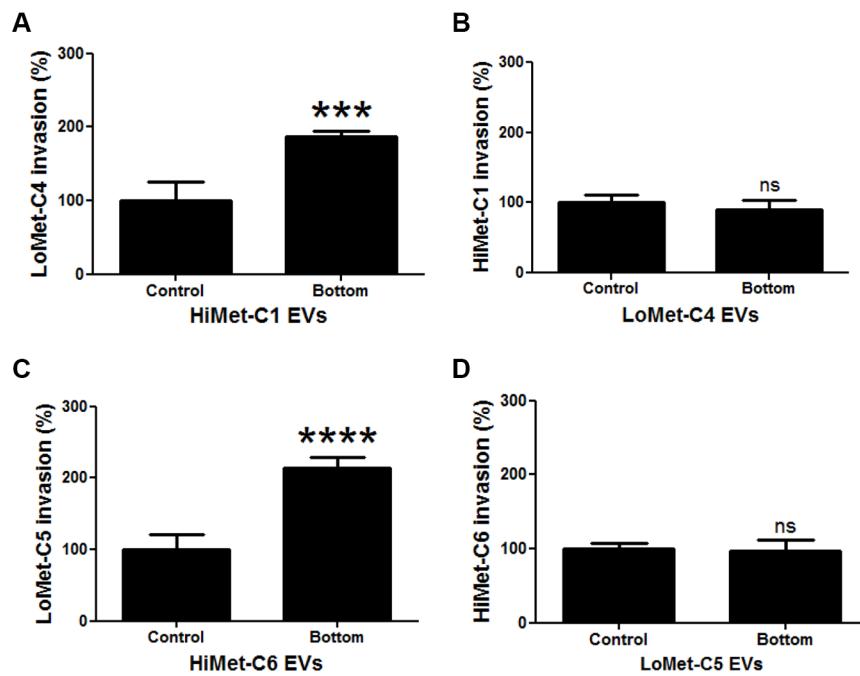

### Supplementary Materials

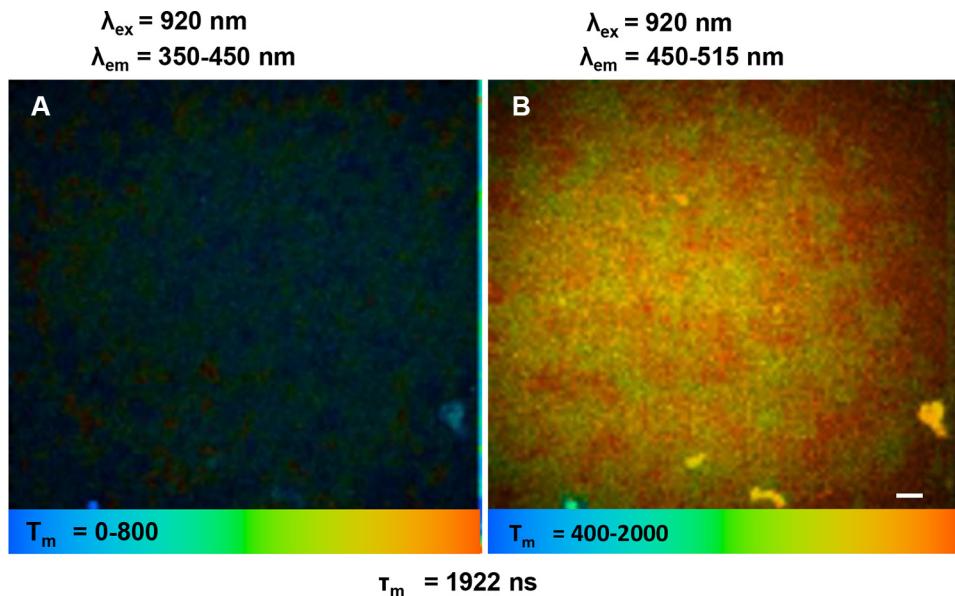

**Supplementary Figure S1: Extracellular vesicles purified by ultracentrifugation or ExoQuick are functionally similar.** EVs were isolated from serum free and EV-free media derived from HiMet-C6 clones by ultracentrifugation (Ultracentr.) or ExoQuick TC Exosome Precipitation Solution (System Biosciences) (ExoQuick). Migration of LoMet-C4 clones (**A**) or parental KHOS cells (**B**) was estimated in the presence of no EVs (0) or 20  $\mu\text{g}/\text{ml}$  EVs (20). Data presented as mean  $\pm$  SEM from triplicate determinations of 3 independent experiments. \* $P < 0.05$  from ANOVA.

**Supplementary Figure S2: Extracellular vesicles secreted by LoMet clonal variants do not increase migration or invasion of HiMet clonal variants.** (A) Increase in the invasion of LoMet clonal variant C5 in the presence of EVs secreted by HiMet clonal variant C1. \*1-way ANOVA ( $F = 102, P < 0.0001$ ), Tukey's MCT for  $P < 0.05$ . (B, C, D) EVs secreted by LoMet EVs (C4, C5) do not increase migration or invasion of HiMet clonal variants (C1, C6). Statistical analysis: (B) 1-way ANOVA ( $F = 3.58, P = 0.055$ ), Tukey's MCT for  $P < 0.05$  = ns; (C) 1-way ANOVA ( $F = 15.8, P = 0.0003$ ), Tukey's MCT for  $P < 0.05$ . (D) 1-way ANOVA ( $F = 0.99, P = 0.397$ ), Tukey's MCT for  $P < 0.05$  = ns. Experiments were performed in triplicate at least twice. Bars: SD.

**Supplementary Figure S3: Chemotactic properties of HiMet EVs.** (A) Increase in the migration of LoMet-C4 in response to HiMet-C1 EV chemotaxis. \*\*\* $P = 0.0003$ . (B) LoMet-C4 EVs do not induce an increase in the migration of HiMet-C1 cells by chemotaxis. (C) Increase in the invasion of LoMet-C5 in response to HiMet-C6 EV chemotaxis. \*\*\*\* $P < 0.0001$ . (D) LoMet-C5 EVs do not induce a response in invasion by HiMet-C6 cells by chemotaxis. Experiments were performed in triplicate at least twice. Two-tailed  $P$  value from an unpaired  $t$  test. Bars: SD.

**Supplementary Figure S4: MPM-FLIM images of PKH67-labelled HiMet-C6 EVs in PBS.** (A) Pseudocolored  $\tau_m$  fluorescence lifetime image (0–800 ps; blue-green-red) recorded at  $\lambda_{\text{Exc}}/\lambda_{\text{Em}}$ : 920/350 to 450 nm. (B) Pseudocolored  $\tau_m$  fluorescence lifetime image (400–2000 ps; blue-green-red) recorded at  $\lambda_{\text{Exc}}/\lambda_{\text{Em}}$ : 920/450 to 515 nm. Magnification: 40 $\times$ . Scale bar: 40  $\mu\text{m}$ .

**Supplementary Table S1: Proteomic analysis of HiMet-C6 EVs**

Proteins abundant in at least 2 of 3 biological replicates analysed in three independent runs.

**Supplementary Table S3: Proteins in HiMet-C6 EVs grouped according to biological process**

| GO – Biological process   | UniProtKB | Symbol    | Name   | Subcellular localization                   |
|---|-----------|-----------|--|--|
| Vesicle trafficking, fusion, exocytosis, endocytosis, cellular transport                            | O43707    | ACTN4     | Alpha-actinin 4                                      | Nucleus, cytoplasm                         |
|   | P04083    | ANXA1     | Annexin A1   | Nucleus, cytoplasm                         |
|   | P78371    | CCT2      | T-complex protein 1 subunit beta                     | Cytoplasm                                  |
|   | P50991    | CCT4      | T-complex protein 1 subunit delta                    | Cytoplasm                                  |
|   | P40227    | CCT6A     | T-complex protein 1 subunit zeta                     | Cytoplasm                                  |
|   | P50990    | CCT8      | T-complex protein 1 subunit theta                    | Cytoplasm                                  |
|   | Q00610    | CLTC      | Clathrin heavy chain 1                               | Cytoplasm                                  |
|   | P69905    | HBA1      | Hemoglobin subunit alpha                             | Cytosol                                    |
|   | P55072    | VCP       | Vasolin containing protein                           | Cytoplasm, ER                              |
|   | P05543    | SERPINA7  | Thyroxine-binding globulin                           | Secreted, extracellular exosome            |
| Transcription regulation, DNA repair, DNA replication, chromosomal stability, nucleosome remodeling | O00303    | EIF3F     | Eukaryotic translation initiation factor 3 subunit F | Cytoplasm                                  |
|   | P04908    | HIST1H2AB | Histone H2A type 1-B/E                               | Nucleus                                    |
|   | Q99879    | HIST1H2BM | Histone H2B type 1-M                                 | Nucleus                                    |
|   | P62805    | HIST1H4A  | Histone H4   | Nucleus                                    |
|   | Q71DI3    | HIST2H3A  | Histone H3.2   | Nucleus                                    |
|   | P07910    | HNRNPC    | Heterogeneous nuclear ribonucleoproteins C1/C2       | Nucleus                                    |
|   | P06748    | NPM1      | Nucleophosmin  | Nucleus, cytoplasm                         |
|   | P0DME0    | SETSP     | Protein SETSP  | Cytoplasm, nucleus                         |
| RNA binding, translation  | P50914    | RPL14     | 60S ribosomal protein L14                            | Cytoplasm, membrane                        |
|   | Q02878    | RPL6      | 60S ribosomal protein L6                             | Cytosol, membrane, nucleus                 |
|   | Q8NHW5    | RPLP0P6   | 60S acidic ribosomal protein P0-like                 | Cytosol                                    |
|   | P62263    | RPS14     | 40S ribosomal protein S14                            | Cytosol, cytoplasm, membrane, mitochondria |
|   | P62249    | RPS16     | 40S ribosomal protein S16                            | Cytosol, membrane                          |
|   | P15880    | RPS2      | 40S ribosomal protein S2                             | Cytosol, membrane, nucleus                 |
|   | P62701    | RPS4X     | 40S ribosomal protein S4, X isoform                  | Cytosol                                    |
|   | P62314    | SNRPD1    | Small nuclear ribonucleoprotein Sm D1                |  |

|   |        |                   |  |                                |
|---|--------|-------------------|--|--------------------------------|
| Cytoskeleton remodeling, ECM proteolysis, cell migration          | O43707 | ACTN4             | Alpha-actinin 4                              | Nucleus, cytoplasm             |
|   | P12110 | COL6A2            | Collagen alpha-2(VI) chain                   | Membrane, secreted             |
|   | P12259 | F5                | Coagulation factor V                         | Extracellular region           |
|   | P04406 | GAPDH             | Glyceraldehyde-3-phosphate dehydrogenase     | Cytoplasm, nucleus, membrane   |
|   | Q06033 | ITIH3             | Inter-alpha-trypsin inhibitor heavy chain H3 | Extracellular region           |
|   | P35580 | MYH10             | Myosin-10                                    | Extracellular region           |
|   | P36955 | PEDF/<br>SERPINF1 | Pigment epithelium-derived factor            | Extracellular region           |
|   | P08670 | VIM               | Vimentin                                     | Cytoplasm                      |
| Metabolism, ion transport, tumour cell proliferation and survival | P53396 | ACLY              | ATP-citrate synthase                         | Cytoplasm                      |
|   | P02771 | AFP               | Alpha-fetoprotein                            | Cytoplasm, extracellular space |
|   | P22234 | PAICS             | Multifunctional protein ADE2                 | Cytosol, membrane              |
|   | P14618 | PKM               | Pyruvate kinase PKM                          | Cytoplasm, nucleus             |

To identify function (as GO-Biological Process), the Universal Protein Resource (UniProt) database was interrogated using the accession number for each of the 38 peptides identified in the analysis as abundant in HiMet EVs (FDR = 0.5%).
