

Fig. S1 Locations of sampling sites on the study area. Numbers indicate the number of the corresponding population (e.g. 01 refers to ORI-01). Numbers in bold correspond to new populations of *O. x intercedens*. Colors indicate the presence of each of the studied taxa, as follows: red - *O. vulgare ssp. hirtum*, green - *O. x intercedens*, blue - *O. onites*. Color portions on the pies in the central area represent the proportion of individuals per sampling site in the hybrid zone.
