

Figure S2

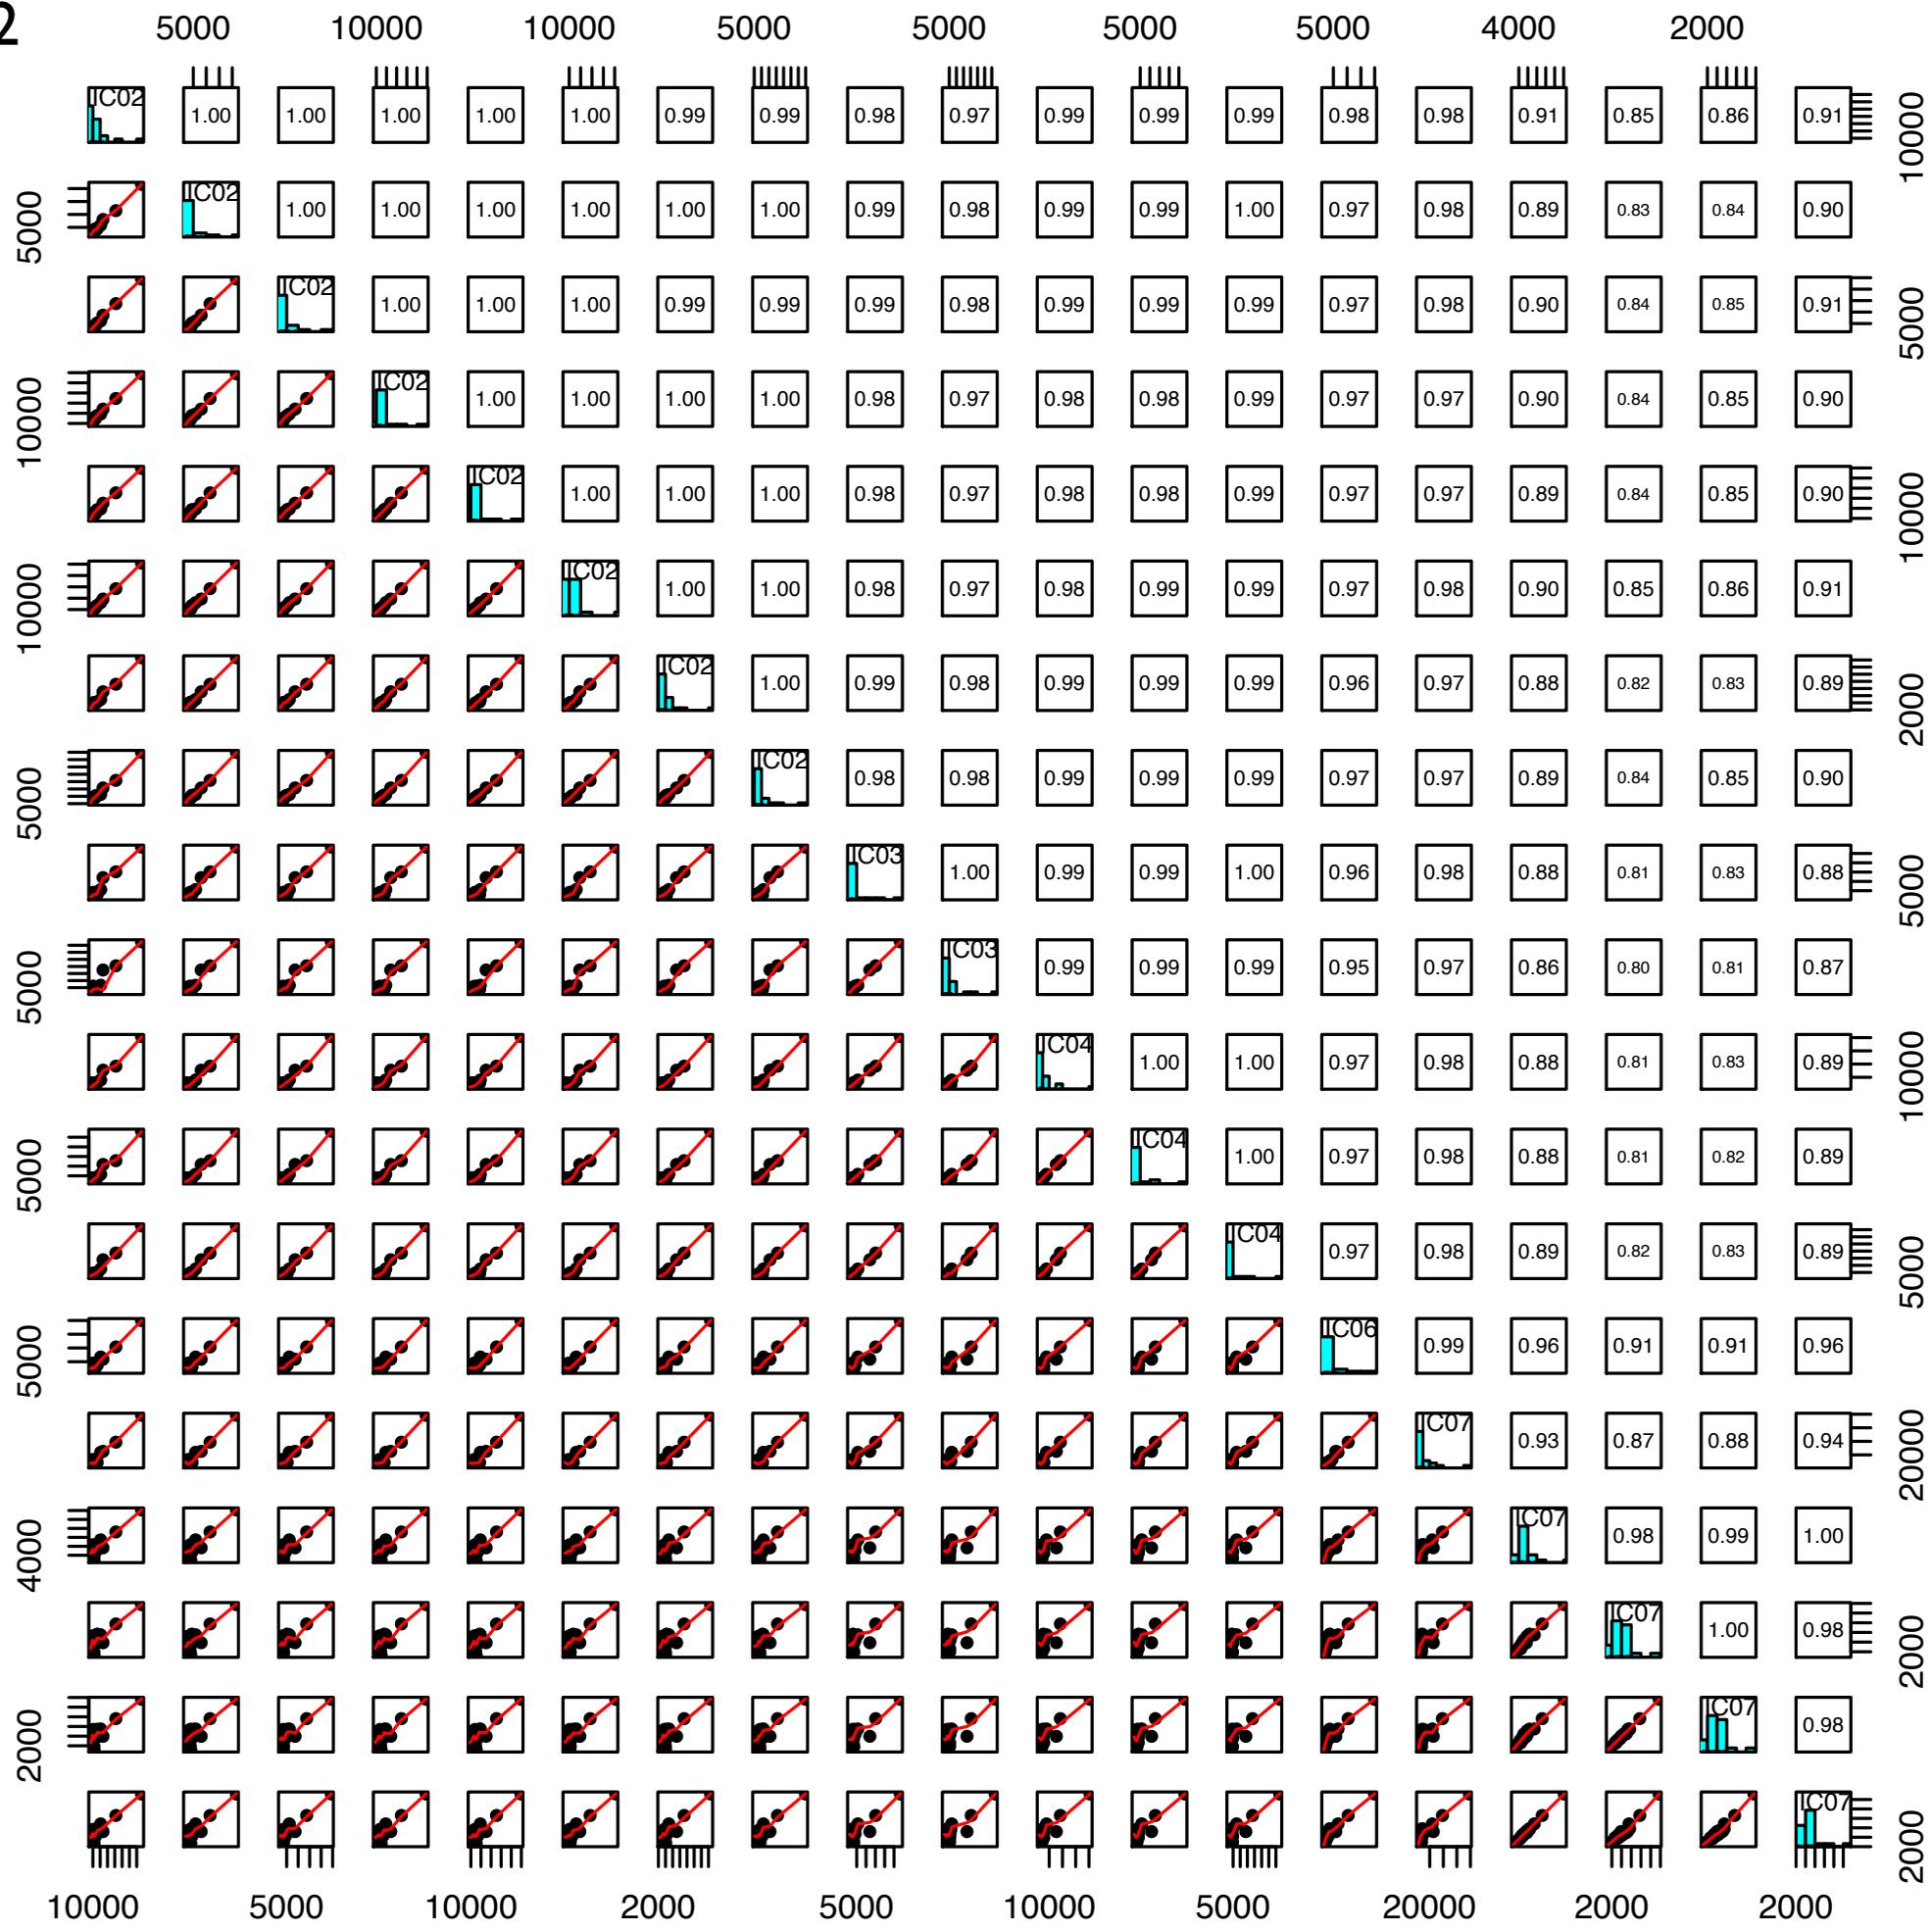

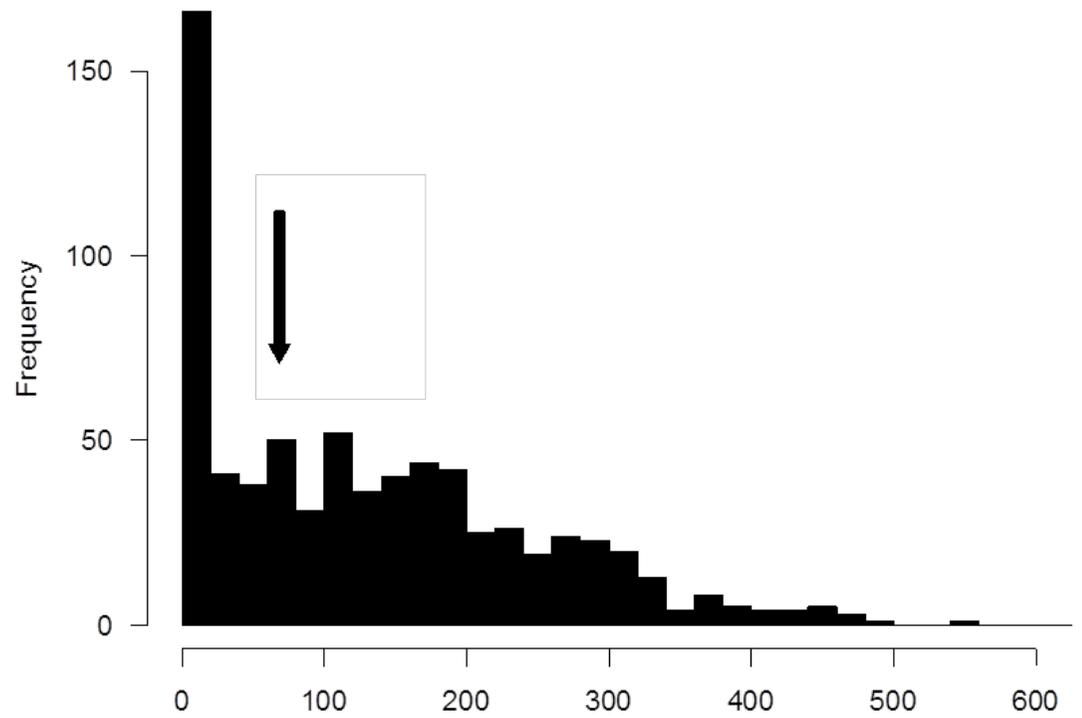

Figure S3

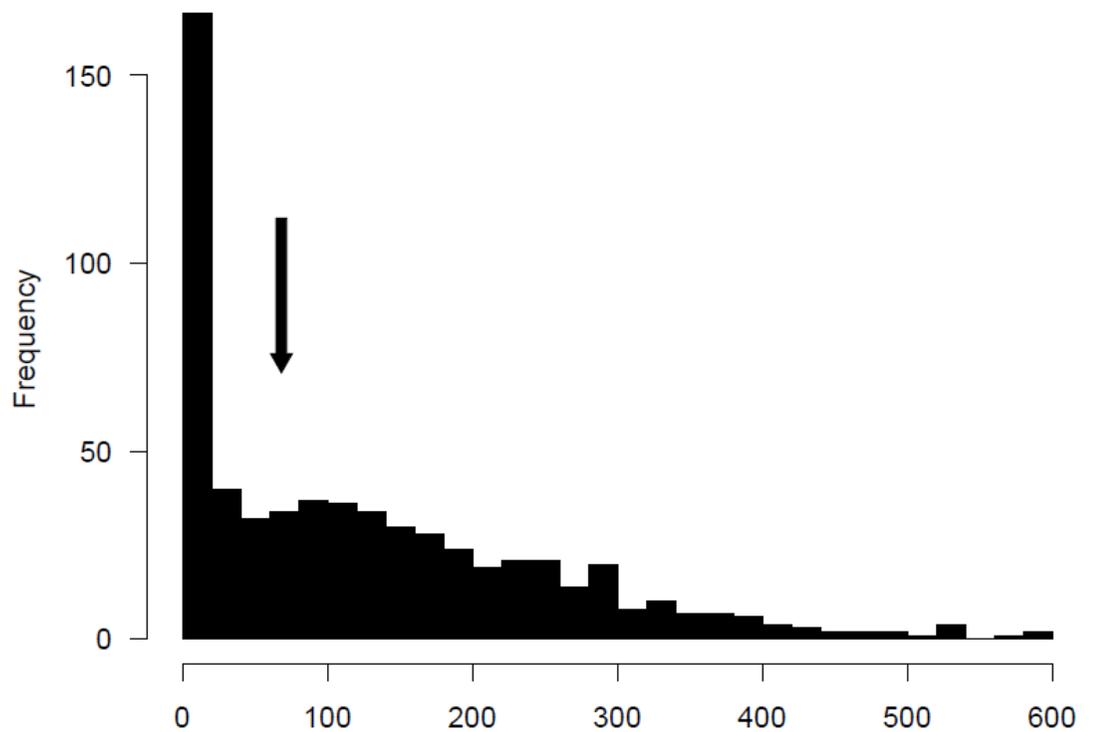

a

Randomization results for 1q42 region

b

Randomization results for chromosome 1

Supplementary Table 1. Copy number of 5S rDNA and adjacent Alu element in four human genome assemblies. CN denotes copy number in the segment.

Assembly	5S CN	Alu CN
GRCh37	16	18
HuRef	5	7
CHM1_1.1	4	6
CHM1tert (25255)	1	3
CHM1tert (25256)	8	9
CHM1tert (25257)	6	6

Supplementary Table 2. Number of Hi-C reads mapping to the repeat masked 5S rDNA repeat unit (2121bp) in each dataset. Shown are the number of reads for which both ends map to the 5S repeat unit and the number of reads for which one end maps to the 5S rDNA repeat unit and the other maps to the rest of the genome [whole genome (WG)]. Both the 5S rDNA unit and the whole genome were masked for repetitive elements.

Datasets	SRR number	Both ends mapped to the 5S rDNA unit	Number of reads mapped to the WG	Total number of mapped reads
HIC020	SRR1658592	80	2833	3405
HIC021	SRR1658593	14	1213	1512
HIC024	SRR1658598	49	1433	1913
HIC025	SRR1658599	26	2464	2833

HIC074	SRR1658701	112	3244	4002
Sum		3859	69198	89557

Supplementary Table 3. Number of Hi-C reads mapping to the repeat masked 45S rDNA repeat unit (45,337 bp) in each dataset. Shown are the number of reads for which both ends map to the 45S rDNA repeat unit and the number of reads for which one end maps to the 45S rDNA repeat unit and the other maps to the rest of the genome [whole genome (WG)]. Both the 45S rDNA unit and the whole genome were masked for repetitive elements.

Datasets	SRR number	Both ends mapped to the 45S rDNA unit	Number of reads mapped to the WG	Total number of mapped reads
