

Supplementary Figure 2. Effect of tamoxifen and cisplatin on methyl- β -cyclodextrin (M β CD) induced cytotoxicity in triple negative breast cancer cell lines. MDA-MB 231 and 468 cells were treated with M β CD (0.5 mM) alone and in combination of M β CD (0.5 mM) with tamoxifen (5 μ M) or M β CD (0.5 mM) with cisplatin (5 μ M) for 48 hours and cytotoxicity was measured with lactate dehydrogenase assay. The cytotoxicity was expressed as percent. The results represent the mean \pm SD of three independent experiments.
