

S5 Fig. Examples of variant and quasi-variant ROIs for normal-HC_{csf} subjects stratified by gender.

(a)

(b)

Fig 5. Examples of variant and quasi-variant ROIs per normal-HC_{csf} subjects stratified by gender.

(a) Left hippocampal volume classified as variant (*vr*) ROI; where the slope of trajectories is not close to zero. (b) Left caudate volume classified as quasi-variant (*qvr*) ROI; where the slope of trajectories is close to zero. Note that for both regions, the y-intercept values vary between subjects, but the slope value of each ROI is the same for all subjects.
