

**Supplemental Figure S6:** Effect of DUB3 expression on NEDD4 E3 ligase family members.

HEK293T cells were transfected with a vector expressing DUB3 or the inactive C89S mutant form or with an empty vector as a control. mRNA expression of NEDD4, ITCH and SMURF1 was measured by qPCR. GAPDH mRNA was used for normalization and TBP was used as an independent control. Data represent the average of 3 independent experiments  $\pm$  SD.
