PS-7	BT2862-BT2886	25	25	–

*IRs identified in each PS promoter region are shown. Noninvertible PS promoters are indicated by –. Consensus motif sequences (ARACGTWCGT) within each IR in BF are underlined, and those in BT are indicated by dashed line.

†The size and number of genes in the PS-7 locus, excluding CTnYCH46-3 (BF2788-BF2921) are shown.
