

Figure S4. Correlation plot of top Ras/MAPK - ASD epistasis results. The plot shows the $-\log_{10} P$ -values from the trio correlation test (y-axis) analysis and PLINK(63, 64) epistasis test (x-axis) in ASD cases for the most significant PLINK(63, 64) epistasis test results ($P < 1.0 \times 10^{-6}$). The gray line graphs $y=x$.
