

Supplemental Figure 1. tat-M2NX has no effect on systolic or diastolic blood pressures up to 30 minutes after receiving drug in control mice compared to tat-SCR. Injection was given at time 0.

Supplemental Figure 2. Testosterone, but not dihydrotestosterone, decreases with age in male mice. (A) Quantification of serum concentration of testosterone measured by ELISA in male mice aged 2 months, 4-5 months, and 18 months. (B) Quantification of serum concentration of dihydrotestosterone (DHT) measured by ELISA in male mice aged 2 months, 4-5 months, and 18 months. * $p < 0.05$.
