
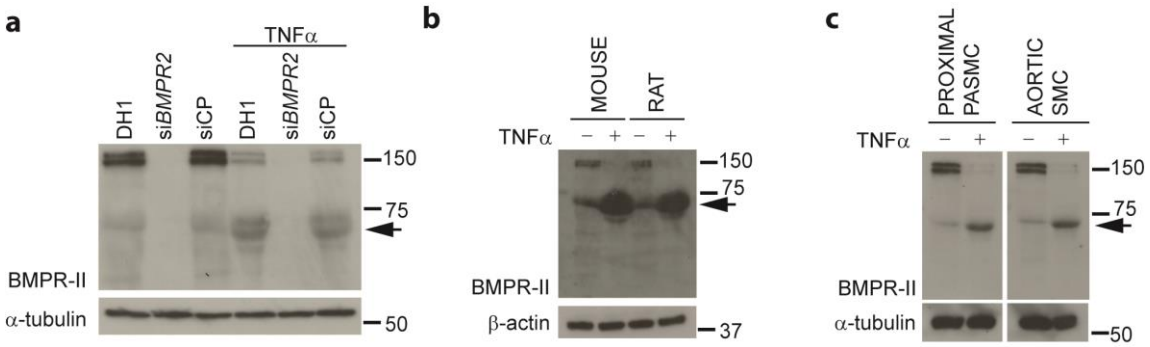
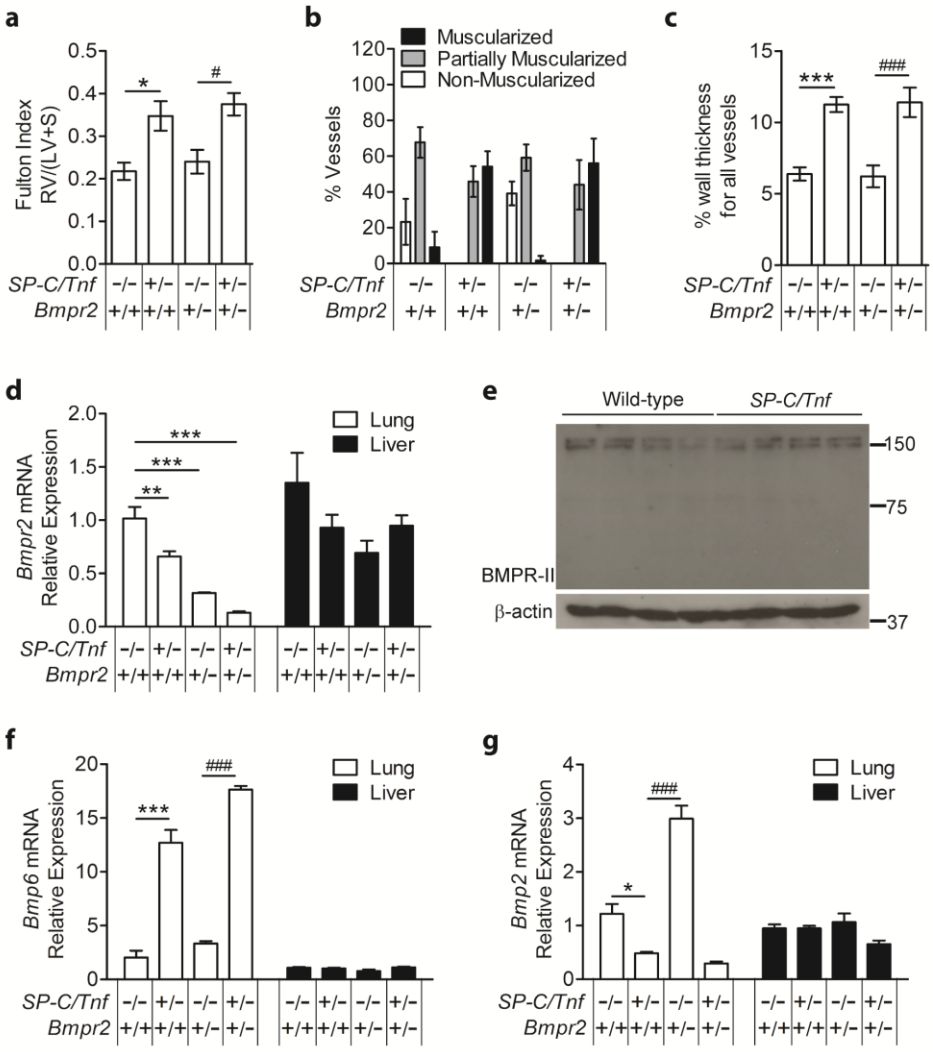
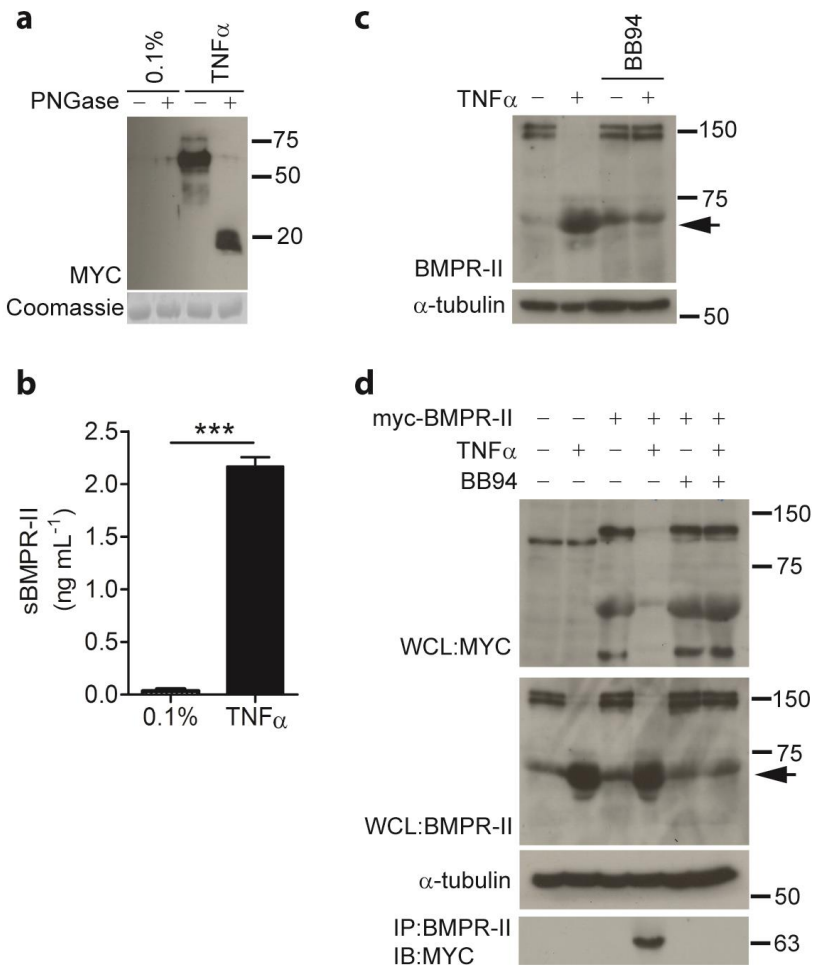
Supplementary Figure 1. TNFα reduces BMPR-II protein and mRNA expression via NF-κB/*RELA*. (**a** and **b**) Representative immunoblots of BMPR-II in human dPASMCs (**a**) and PAECs (**b**) treated with IL-1β (1 ng mL^{-1}), IL-6 (25 ng mL^{-1}), IL-8 (25 ng mL^{-1}) and TNFα (1 ng mL^{-1}) for 24 h. Blots were reprobed for α-tubulin to ensure equal loading. The data shown are representative of three experiments. (**c** and **d**) *BMPR2* mRNA expression, normalized to *ACTB*, in (**c**) human dPASMCs and (**d**) PAECs treated with TNFα (1 ng mL^{-1}) for 1, 4, 8 or 24 h (n = 3; Student's t-test). (**e**) *BMPR2* mRNA expression, normalized to *ACTB*, in human control dPASMCs and PAECs transfected with DharmaFECT1™ alone (DH1), si*RELA* or non-targeting siRNA control (siCP). Cells were treated with TNFα (1 ng mL^{-1}) for 24 h (n = 3; Student's t-test). *$P \leq 0.05$, **$P \leq 0.01$, ***$P \leq 0.001$. Error bars represent mean ± s.e.m. Lower molecular mass BMPR-II is indicated by arrow.



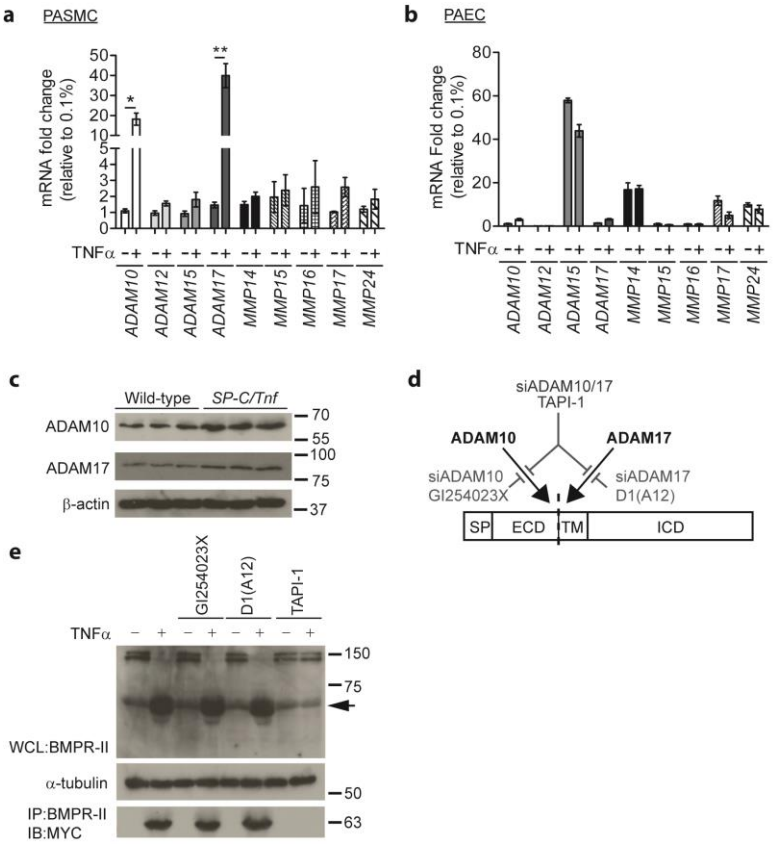
Supplementary Figure 2. TNFα reduces BMPR-II protein and generates a cleavage product in SMCs. (**a**) Representative immunoblots of BMPR-II in human control dPASMCs transfected with DharmaFECT1™ alone (DH1), si*BMPR2* or non-targeting siRNA control (siCP). Cells were treated with TNFα (1 ng mL^{-1}) for 24 h. Blots were reprobed for α-tubulin to ensure equal loading. The data shown are representative of three experiments. (**b**) Representative immunoblots of BMPR-II in mouse and rat PASMCs treated with TNFα (1 ng mL^{-1}) for 24 h. Reprobed for β-actin to ensure equal loading. The data shown are representative of three experiments. (**c**) Representative immunoblots of BMPR-II in human control proximal and aortic PASMCs treated with TNFα (1 ng mL^{-1}) for 24 h. Blots were reprobed for α-tubulin to ensure equal loading. The data shown are representative of three experiments. Lower molecular mass BMPR-II is indicated by an arrow.



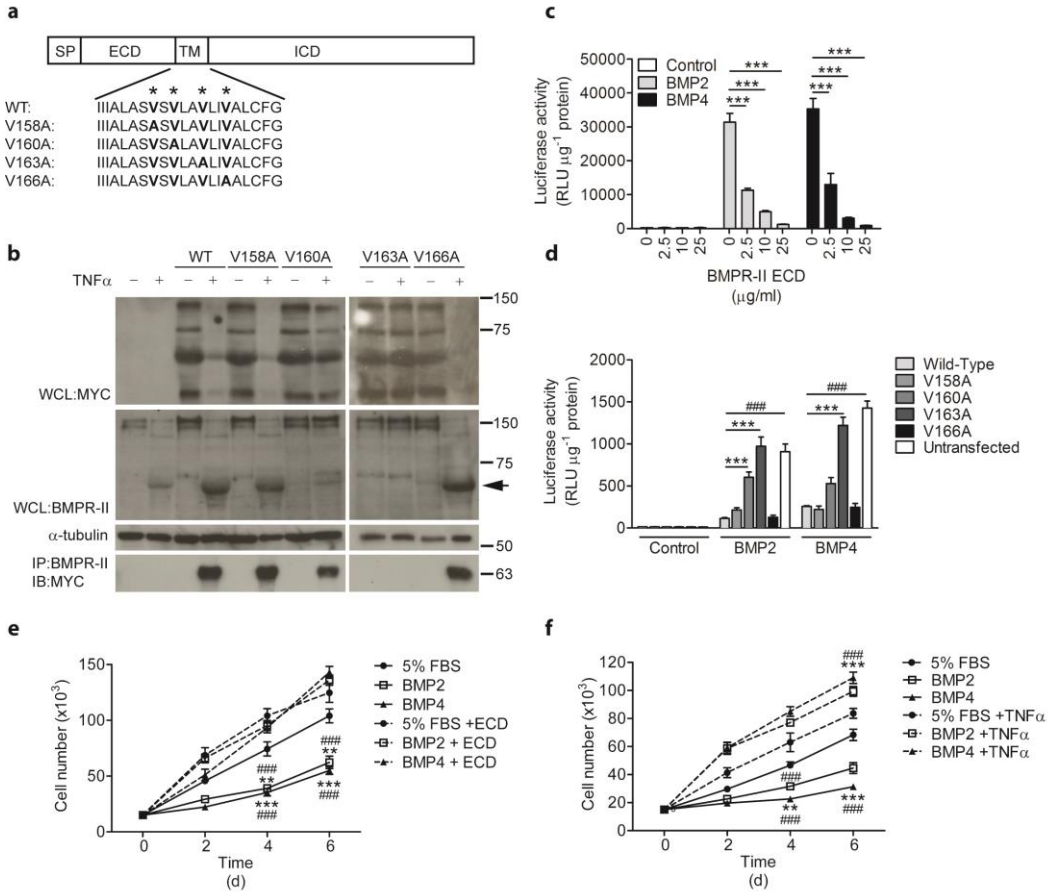
Supplementary Figure 3. Lung specific expression of TNFα induces pulmonary hypertension. *Bmpr2*$^{+/+}$, *SP-C/Tnf x Bmpr2*$^{+/+}$, *Bmpr2*$^{+/-}$ and *SP-C/Tnf x Bmpr2*$^{+/+}$ (n = 4 of each) transgenic mice were assessed at 8-9 weeks old. (**a**) Assessment of right ventricular hypertrophy (Fulton index (RV/LV+S)). (**b**) Quantification of the numbers of non-, partially and fully muscularized arteries as a percentage of total alveolar wall and duct arteries (n = 6 for all groups). (**c**) Assessment of pulmonary arterial wall thickness as a percentage of luminal diameter (n = 6 for all groups). (**d**) *Bmpr2* mRNA expression, normalized to *Actb*, in lungs and livers isolated from the above mice. (**e**) Representative immunoblot of BMPR-II expression in livers isolated from 8-9 week old *Bmpr2*$^{+/+}$ and *SP-C/Tnf x Bmpr2*$^{+/+}$ transgenic mice. Blots were reprobed for β-actin to ensure equal loading (n = 4). (**f**) *Bmp6* and (**g**) *Bmp2* mRNA expression, normalized to *Actb*, in lungs and livers isolated from the above mice. One-way ANOVA with post-hoc Tukey's for multiple comparisons used in **a**, **c**, **d**, **f** and **g**. */#$P \leq 0.05$, **$P \leq 0.01$, ***/###$P \leq 0.001$. Error bars represent mean ± s.e.m.



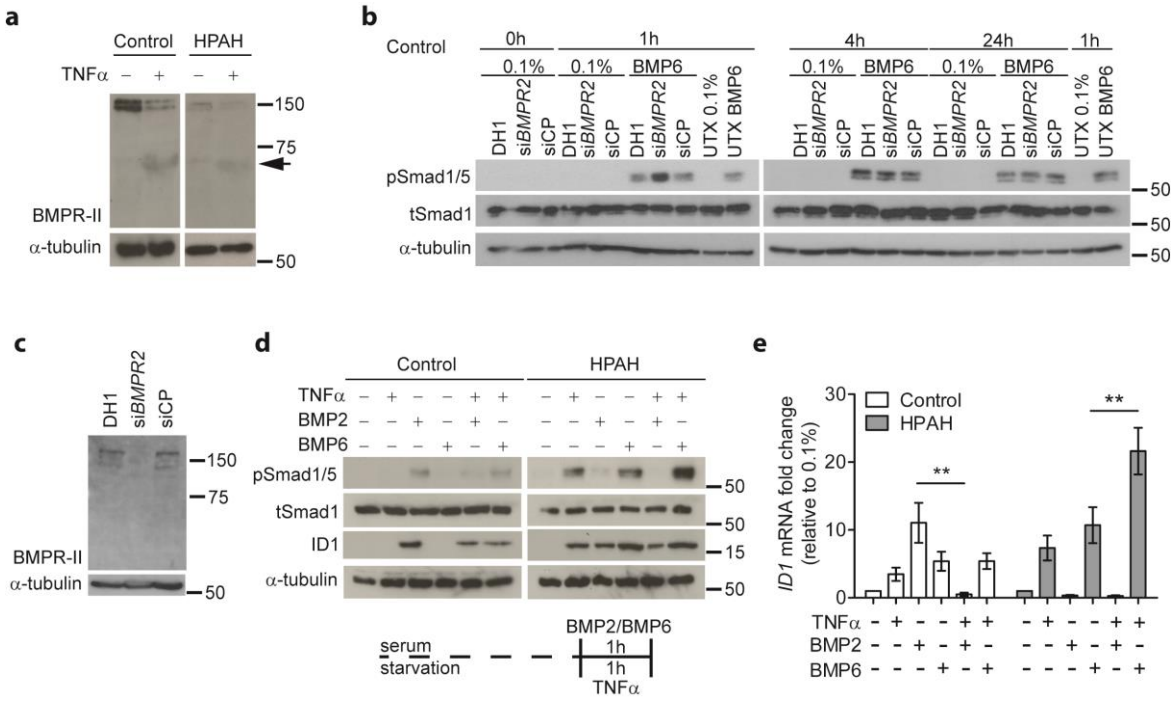
Supplementary Figure 4. Release of sBMPR-II can be inhibited by a pan-metalloprotease inhibitor. (**a**) Representative immunoblot of immunoprecipitated sBMPR-II in conditioned media from control human dPASMCs transfected with 5'-myc-tagged BMPR-II and treated with TNFα (1 ng mL^{-1}) for 24 h. Samples were deglycosylated with PNGaseF as indicated. Myc expression was assessed using immunoblotting. To ensure equal loading 0.1% FBS was loaded and assessed by Coomassie blue. (**b**) Assessment of sBMPR-II release by ELISA using control human dPASMCs treated with TNFα (1 ng mL^{-1}) for 24 h (n = 3; Student's t-test). (**c**) Representative immunoblot of BMPR-II expression of control human dPASMCs pre-treated with batimastat (BB94) (10 ng mL) for 30 m prior to TNFα (1 ng mL^{-1}) treatment for 24 h. (**d**) Representative immunoblots of BMPR-II, myc and immunoprecipitated sBMPR-II in conditioned media from control human dPASMCs transfected with 5'-myc-tagged BMPR-II and pre-treated with batimastat (BB94) (10 ng mL^{-1}) for 30 min prior to 24 h TNFα (1 ng mL^{-1}) treatment. Blots were reprobed for α-tubulin to ensure equal loading. The data shown are representative of three experiments. ***$P \leq 0.001$. Error bars represent mean ± s.e.m. Lower molecular mass BMPR-II is indicated by an arrow.



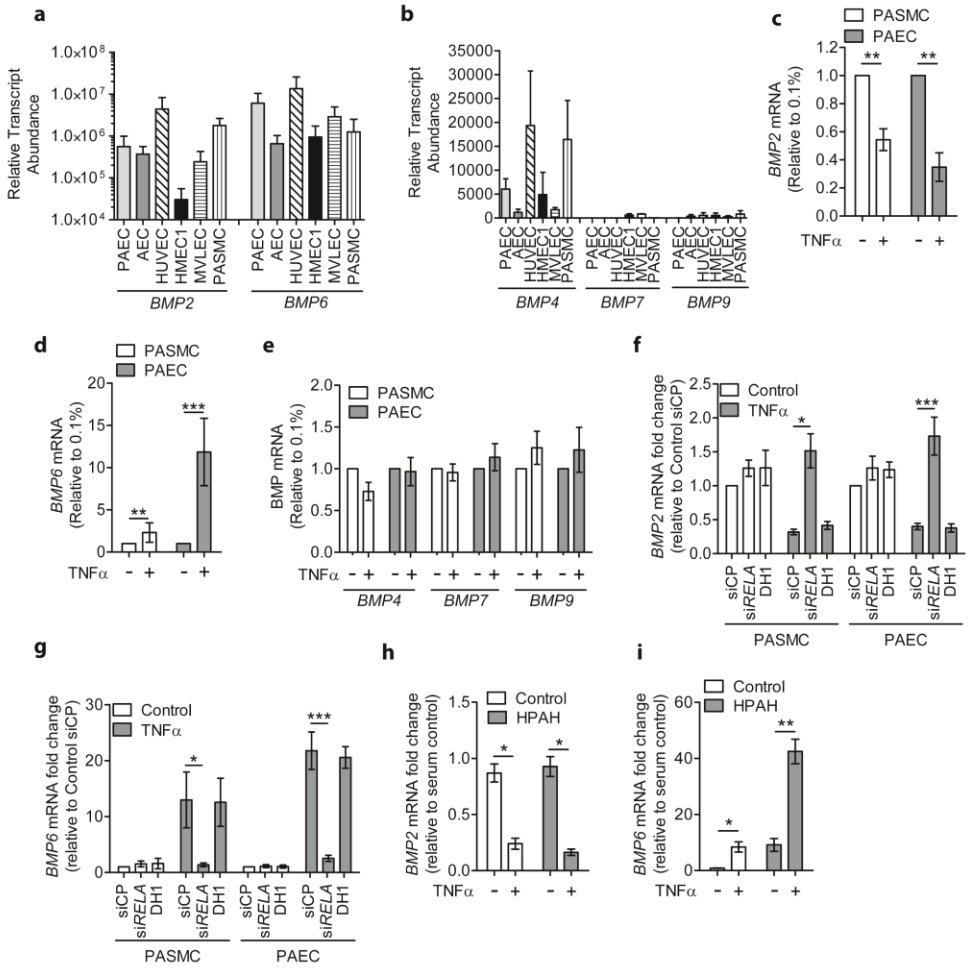
Supplementary Figure 5. TNFα induces *ADAM10/ADAM17* expression, promoting BMPR-II cleavage in SMCs. (**a** and **b**) *ADAM10*, *ADAM12*, *ADAM15*, *ADAM17*, *MMP14*, *MMP15*, *MMP16*, *MMP17* and *MMP24* mRNA expression, normalized to *ACTB*, in human control dPASMCs (**a**) and PAECs (**b**) treated with TNFα (1 ng mL^{-1}) for 24 h. (n = 4; Student's t-test). (**c**) Representative immunoblots of ADAM10 and ADAM17 expression in lungs isolated from 8 week old *Bmpr2*$^{+/+}$ (n = 3) and *SP-C/Tnf/Bmpr2*$^{+/+}$ (n = 3) transgenic mice. Blots were reprobed for β-actin to ensure equal loading. (**d**) Schematic of pharmacological and siRNA inhibition of ADAM10 and 17. (**e**) Representative immunoblots of BMPR-II, myc and immunoprecipitated sBMPR-II in conditioned media from control human dPASMCs transfected with 5'-myc-tagged BMPR-II and pre-treated with GI254023X (10 μM), D1(A12) (50 nM) or TAPI-1 (10 μM) for 30 min prior to 24 h TNFα (1 ng mL^{-1}) treatment. Blots were reprobed for α-tubulin to ensure equal loading. Data are representative of three experiments. *$P \leq 0.05$, **$P \leq 0.01$. Error bars represent mean ± s.e.m. Lower molecular mass BMPR-II is indicated by an arrow.



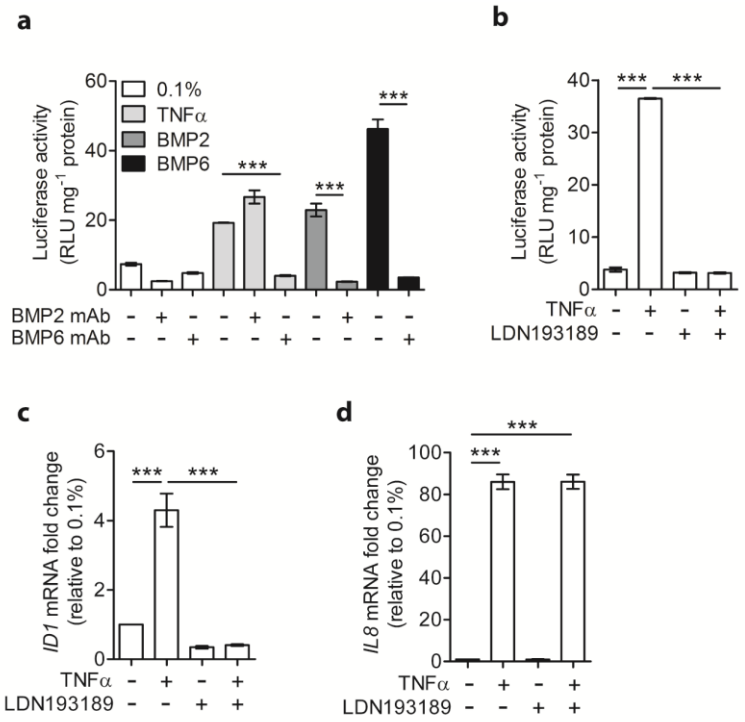
Supplementary Figure 6. Soluble BMPR-II acts as a ligand trap. (**a**) Schematic of full length BMPR-II (SP – signal peptide; ECD – ectodomain; TM – transmembrane; ICD - intracellular cytoplasmic domain). Valines (in bold) in 5'-myc-BMPR-II were converted to alanine (in bold) generating the V158A, V160A, V163A and V166A constructs (positions marked with "*"). (**b**) Representative immunoblots of BMPR-II, myc and immunoprecipitated sBMPR-II in conditioned media from control human dPASMCs transfected with wild-type and mutant 5'-myc-tagged BMPR-II constructs and treated with TNFα (1 ng mL^{-1}) for 24 h. Blots were reprobed for α-tubulin to ensure equal loading. The data shown are representative of three experiments. (**c** and **d**) Ligand trap assessment by measuring luciferase activity in C2C12-BRE cells. (**c**) C2C12-BRE cells were treated with a commercial glycosylated BMPR-II ectodomain (BMPR-II ECD) (2.5, 10 and 25 μg mL^{-1}) and BMP2 or BMP4 (10 ng mL^{-1}) for 1 h prior to measuring luciferase activity (n = 3). (**d**) C2C12-BRE cells were treated with conditioned media from control human dPASMCs transfected with wild type and the mutant 5'-myc-tagged BMPR-II constructs and treated with TNFα (1 ng mL^{-1}) for 24 h. C2C12-BRE cells were treated with conditioned media and BMP2 or BMP4 (10 ng mL^{-1}) for 1 h prior to measuring luciferase activity. (n = 3). (**e** and **f**) Proliferation assessment of human proximal PASMCs. (**e**) Cells were treated BMP2 or BMP4 (10 ng mL^{-1}) +/- BMPR-II-ECD (25 μg mL^{-1}) every 48 h for 6 days. Cells were counted on days 0, 2, 4 and 6 (n = 3; Student's t-test, $^{**}P \leq 0.01$, $^{***}P \leq 0.001$ compared with 5% FBS; $^{\#\#\#}P \leq 0.001$ compared with 5% FBS + BMPR-II ECD). (**f**) Cells were treated BMP2 or BMP4 (10 ng mL^{-1}) +/- TNFα (1 ng mL^{-1}) every 48 h for 6 days. Cells were counted on days 0, 2, 4 and 6 (n = 3; Student's t-test, $^{**}P \leq 0.01$, $^{***}P \leq 0.001$ compared with 5% FBS; $^{\#\#\#}P \leq 0.001$ compared with 5% FBS + TNFα). One-way ANOVA with post-hoc Tukey's for multiple comparisons used in **c** and **d**. $^{***/\#\#\#}P \leq 0.001$. Error bars represent mean ± s.e.m. Lower molecular mass BMPR-II is indicated by an arrow.



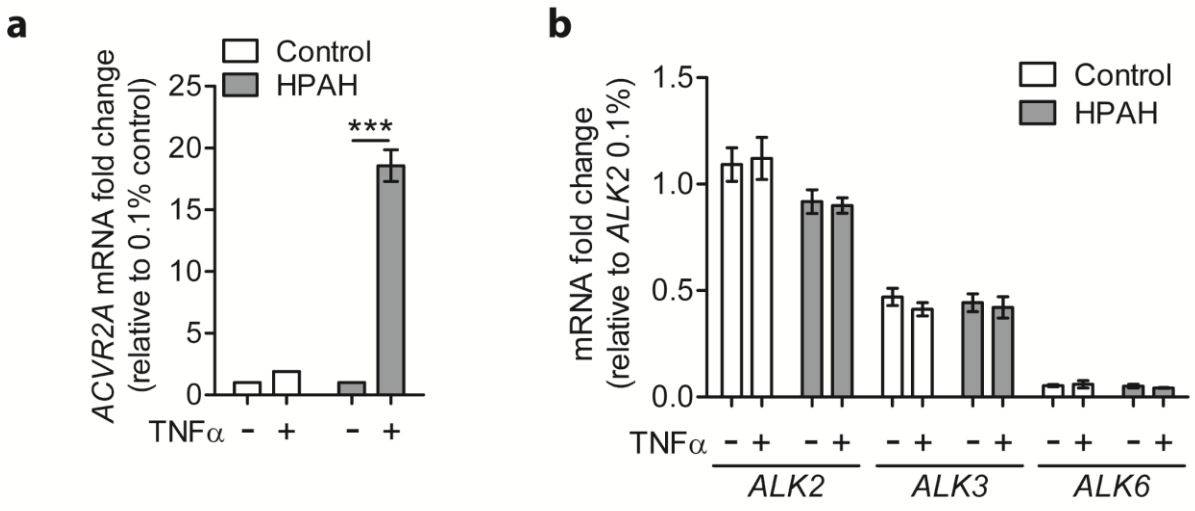
Supplementary Figure 7. TNFα changes BMP6 signaling dynamics consistent with BMPR-II siRNA. (**a**) Representative immunoblots of BMPR-II expression in human dPASMCs from disease-free controls and HPAH patients stimulated with TNFα (1 ng mL^{-1}) for 24 h. Blots were reprobed for α-tubulin to ensure equal loading. The data shown are representative of three control and HPAH cell lines. (**b** and **c**) Control human dPASMCs were transfected with *BMPR2* siRNA (si*BMPR2*) or control siRNA (siCP) using DharmaFECT1™ (DH1) followed by treatment with BMP6 (10 ng mL^{-1}) in 0.1% FBS for 1,4 or 24 hours. (**b**) Protein lysates were immunoblotted for phospho-Smad 1/5 and total Smad 1 followed by reprobing for α-tubulin to ensure equal loading. Data are representative of three separate experiments. (**c**) Immunoblotting for BMPR-II to confirm the loss of protein in siBMPR2-transfected PASMCs. Blots were reprobed for α-tubulin to ensure equal loading. Data are representative of three separate experiments. (**d**) Immunoblotting of phospho-Smad 1/5, total Smad 1 and ID1 expression in human dPASMCs from disease-free controls and HPAH patients co-stimulated with TNFα (1 ng mL^{-1}) and/or BMP2 or BMP6 (both 10 ng mL^{-1}) for 1 h. Blots were reprobed for α-tubulin to ensure equal loading. Data are representative of three control and HPAH cell lines. (**e**) *ID1* mRNA expression, normalized to *ACTB*, in human dPASMCs from disease-free controls and HPAH patients co-stimulated with TNFα (1 ng mL^{-1}) and/or BMP2 or BMP6 (both 10 ng mL^{-1}) for 1 h (n = 3; one-way ANOVA with post-hoc Tukey's for multiple comparisons). ** $P \leq 0.01$. Error bars represent mean ± s.e.m. Lower molecular mass BMPR-II is indicated by an arrow.



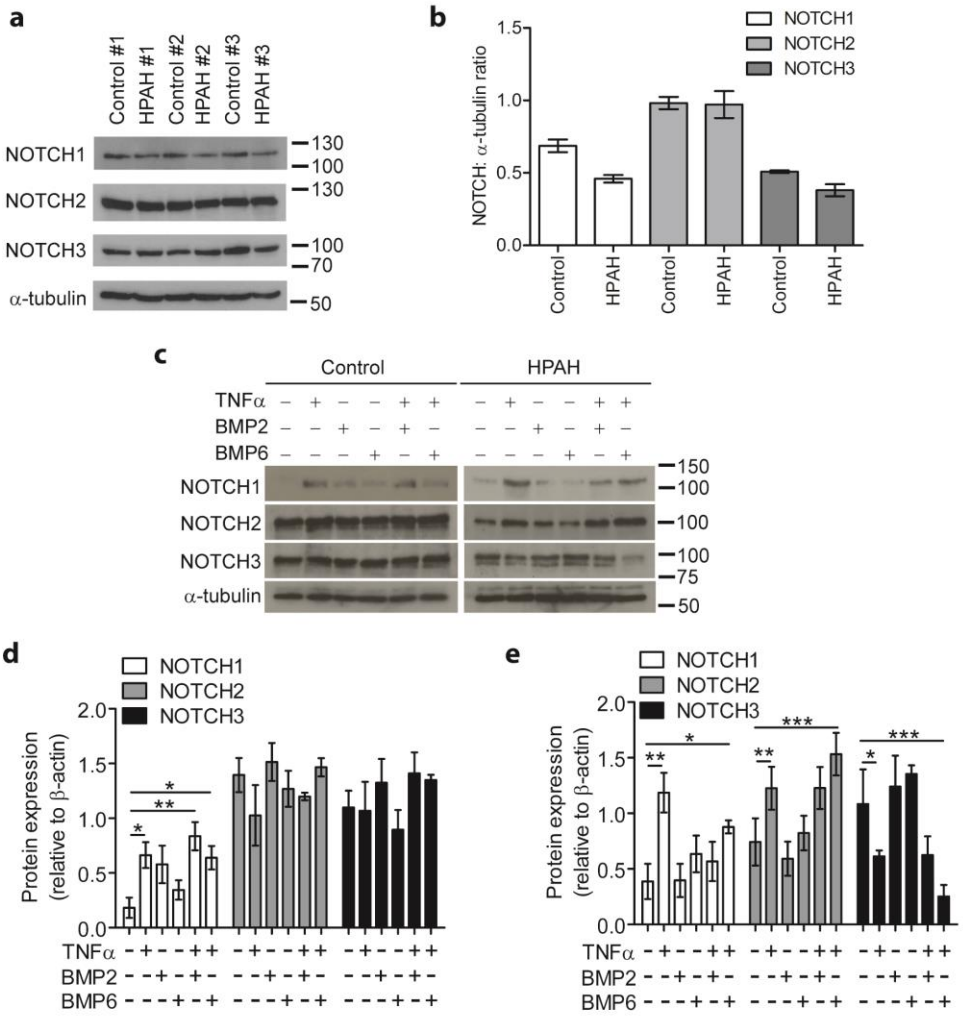
Supplementary Figure 8. *BMP2* and *BMP6* are the most abundantly expressed ligands in vascular cells. (**a** and **b**) Relative transcript abundance of *BMP2*, *BMP4*, *BMP6*, *BMP7* and *BMP9*, normalized to *B2M* and *ACTB* as detailed in the methods, in endothelial-derived cells (AECs, HMEC1s, HUVECs, HMVLECs, and PAECs) and distal smooth muscle cells (PASMCs) (n=3 independent experiments. (**c** - **e**) *BMP2* (**c**), *BMP6* (**d**), *BMP4*, *BMP7* and *BMP9* (**e**) mRNA expression, normalized to *ACTB*, in control human dPASMCs and PAECs treated with TNFα (1 ng mL^{-1}) for 24 h (n = 5; Student's t-test). (**f** and **g**) *BMP2* and *BMP6* mRNA expression, normalized to *ACTB*, in control human dPASMCs and PAECs following treatment with DharmaFECT1^{TM} alone (DH1), si*RELA* or non-targeting siRNA control (siCP) with or without 24 h TNFα (1 ng mL^{-1}) treatment (n = 3; one-way ANOVA with post-hoc Tukey's for multiple comparisons). (**h** and **i**) *BMP2* and *BMP6* mRNA expression, normalized to *ACTB*, in human dPASMCs from disease-free controls and HPAH patients stimulated with or without TNFα (1 ng mL^{-1}) for 24 h (n = 3; one-way ANOVA with post-hoc Tukey's for multiple comparisons). PAEC – human pulmonary artery endothelial cells; AEC - human aortic endothelial cells; HMEC1 - human microvascular endothelial cells; HUVEC – human umbilical vein endothelial cells; HMVLEC – human microvascular lung endothelial cells; PASMC – human distal pulmonary artery smooth muscle cells. *$P \leq 0.05$, **$P \leq 0.01$, ***$P \leq 0.001$. Error bars represent mean ± s.e.m.



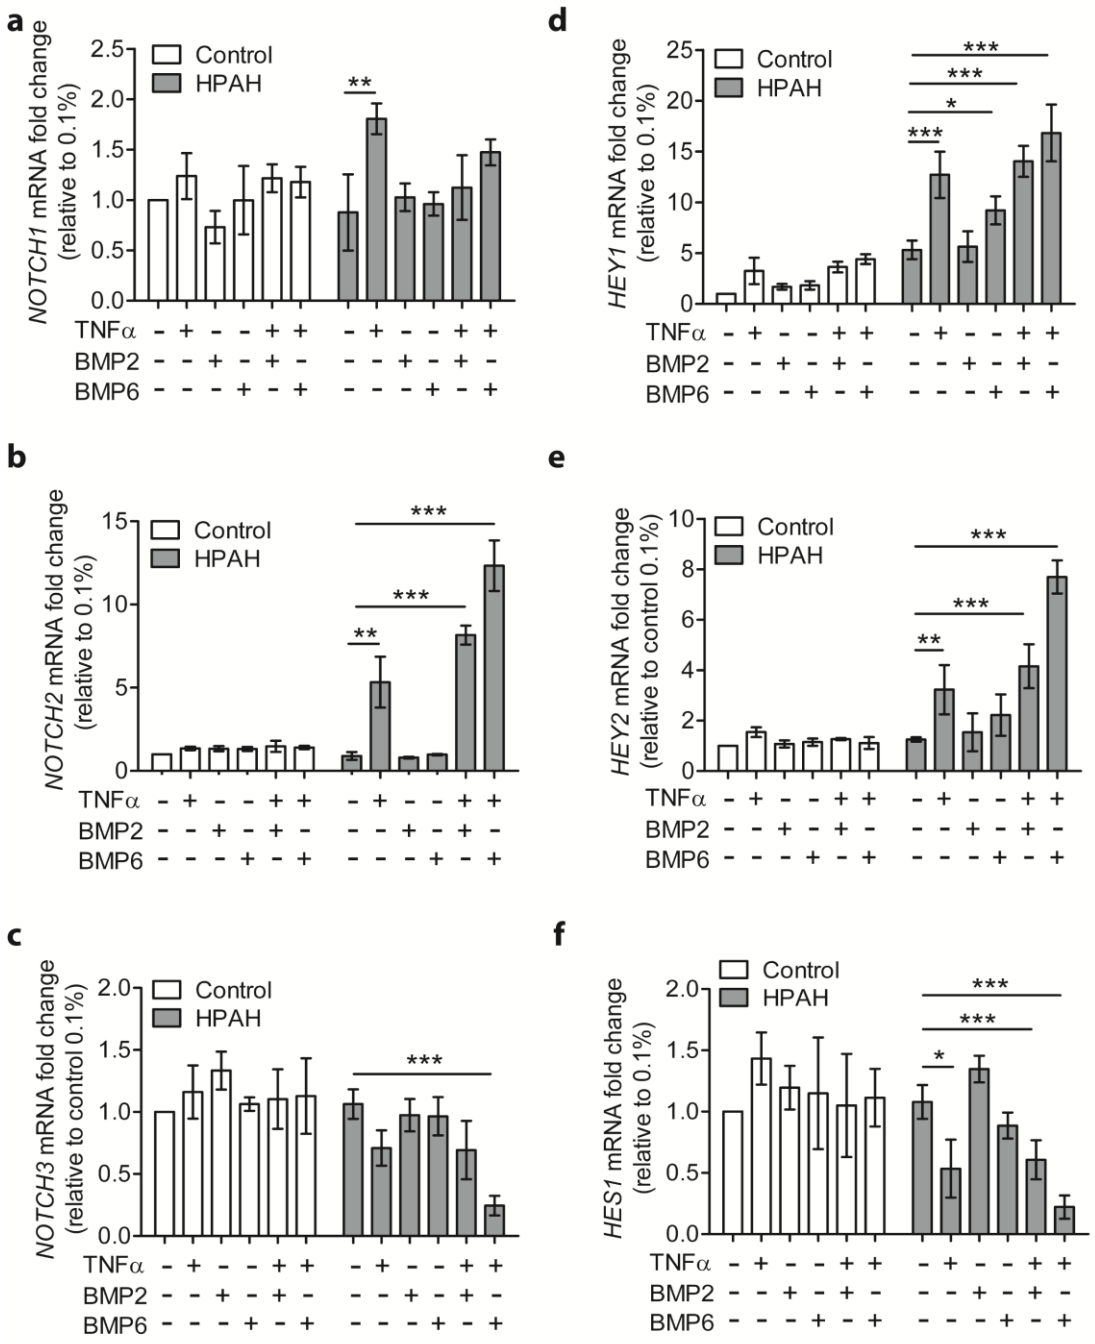
Supplementary Figure 9. TNFα promotes BMP signalling via BMP6 induction. (**a**) C2C12-BRE mouse myoblasts were treated with TNFα (1 ng mL^{-1}), BMP2 (10 ng mL^{-1}) or BMP6 (10 ng mL^{-1}) in the presence or absence of BMP2 mAb (1 µg mL^{-1}) or BMP6 mAb (1 µg mL^{-1}) for 24 h prior to measuring luciferase activity (n = 3; repeated measures ANOVA with post-hoc Tukey's test). (**b**) C2C12-BRE mouse myoblasts were treated with TNFα (1 ng mL^{-1}) and LDN193189 (250 nM) for 16 h prior to measuring luciferase activity (n = 3; repeated measures ANOVA with post-hoc Tukey's test). (**c** and **d**) *ID1* and *IL8* mRNA expression, normalized to *ACTB*, in control human dPASMCs treated with LDN193189 (250 nM) and/or TNFα (1 ng mL^{-1}) for 16 h as indicated. Data are expressed as the fold-change compared to the untreated control (n = 5; one-way ANOVA with post-hoc Tukey's for multiple comparisons). ***$P \leq 0.001$. Error bars represent mean ± s.e.m.



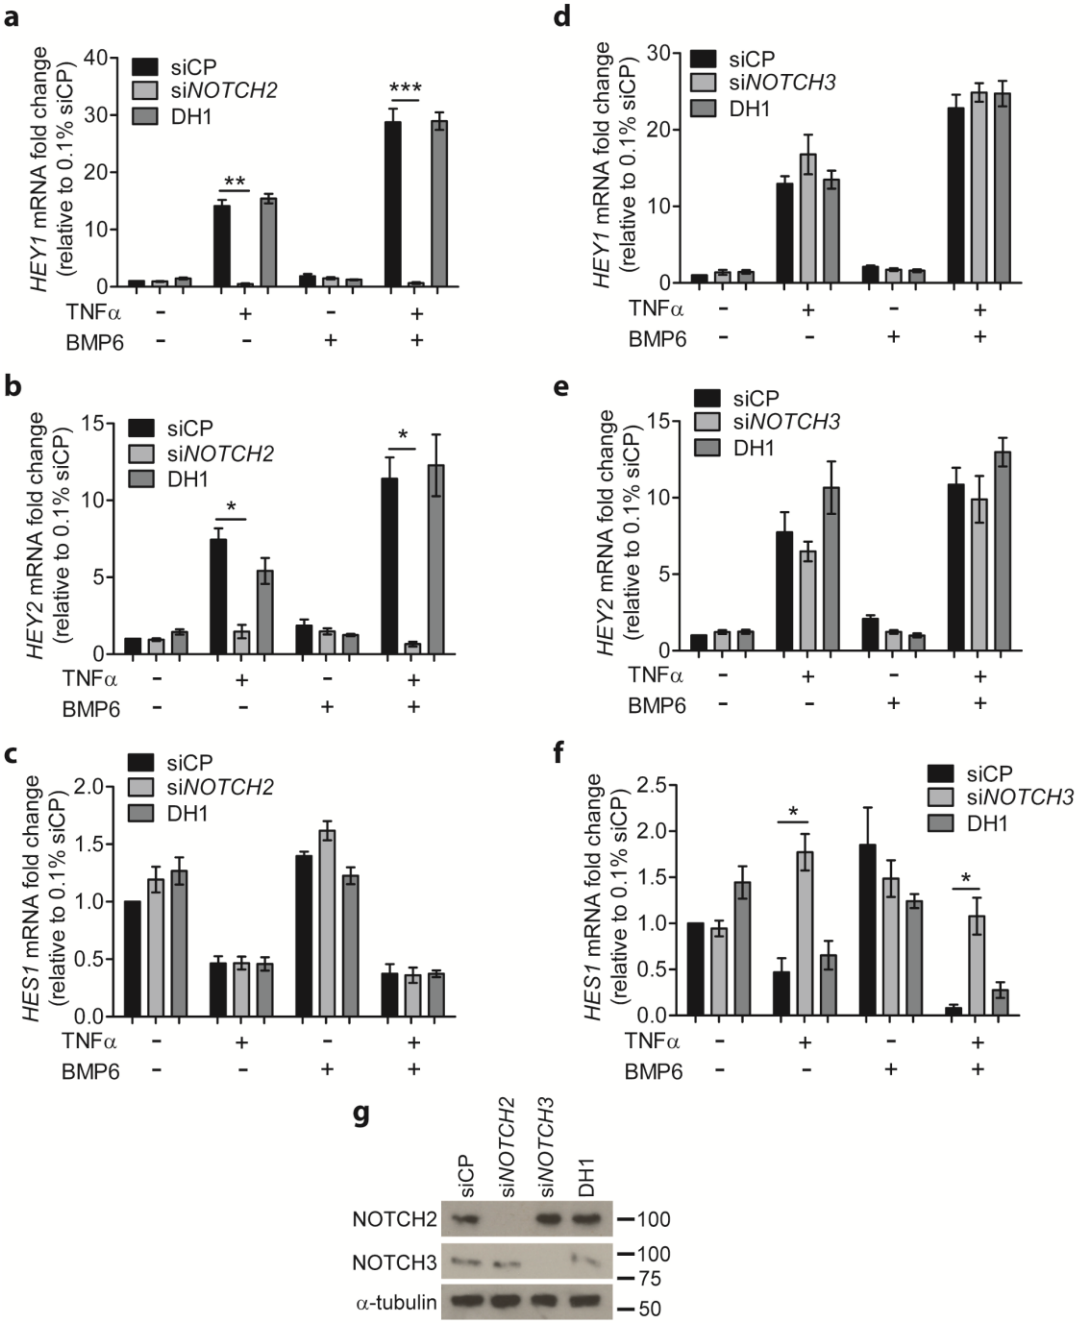
Supplementary Figure 10. TNFα induces *ACVR2A* expression in HPAH PASMCs. (**a**) *ACVR2A* mRNA expression, normalized to *ACTB*, in human dPASMCs from disease-free controls and HPAH patients stimulated with TNFα (1 ng mL^{-1}) for 24 h (n = 3; Student's t-test). (**b**) *ALK2*, *ALK3* and *ALK6* mRNA expression, normalized to *ACTB*, in human dPASMCs from disease-free controls and HPAH patients stimulated with TNFα (1 ng mL^{-1}) for 24 h. ***$P \leq 0.001$. Error bars represent mean ± s.e.m.



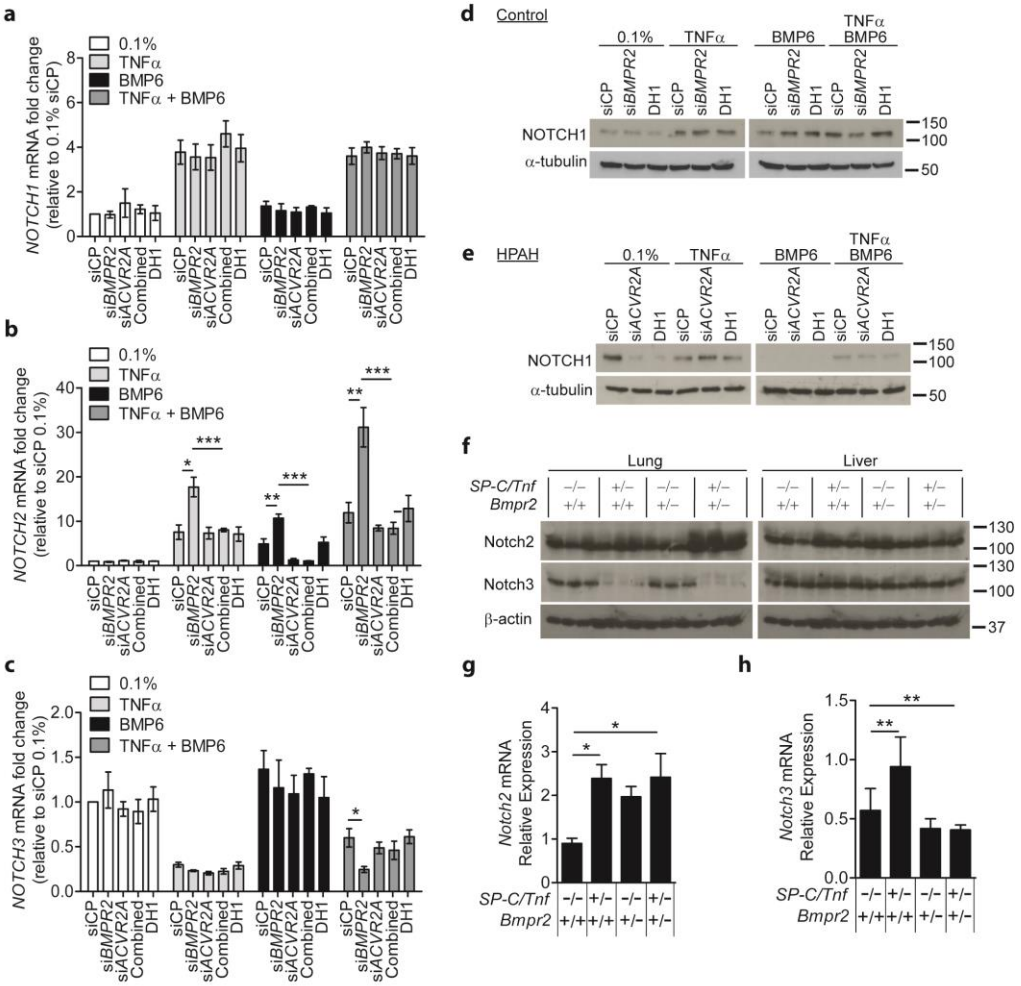
Supplementary Figure 11. TNFα selectively alters NOTCH expression in HPAH PASMCs. (**a**) Immunoblotting for cleaved/transmembrane intracellular NTM (NTM) regions for NOTCH1, NOTCH2 and NOTCH3 expression in control disease-free and HPAH dPASMCs (n=3 different lines for each). Blots were reprobed for α-tubulin to ensure equal loading. (**b**) Densitometry of NTM regions from blots in panel **a** relative to α-tubulin levels. (**c**) Immunoblotting for NTM regions for NOTCH1, NOTCH2 and NOTCH3 expression in control disease-free and HPAH dPASMCs treated with TNFα (1 ng mL^{-1}) and/or BMP2 or BMP6 (both 10 ng mL^{-1}) for 1 h as indicated. Blots were reprobed for α-tubulin to ensure equal loading. (**d** and **e**) Densitometry of NTM regions for immunoblots in panel **c** relative to α-tubulin levels. (n = 3; Mann-Whitney Test). *$P \leq 0.05$, **$P \leq 0.01$, ***$P \leq 0.001$. Error bars represent mean ± s.e.m.



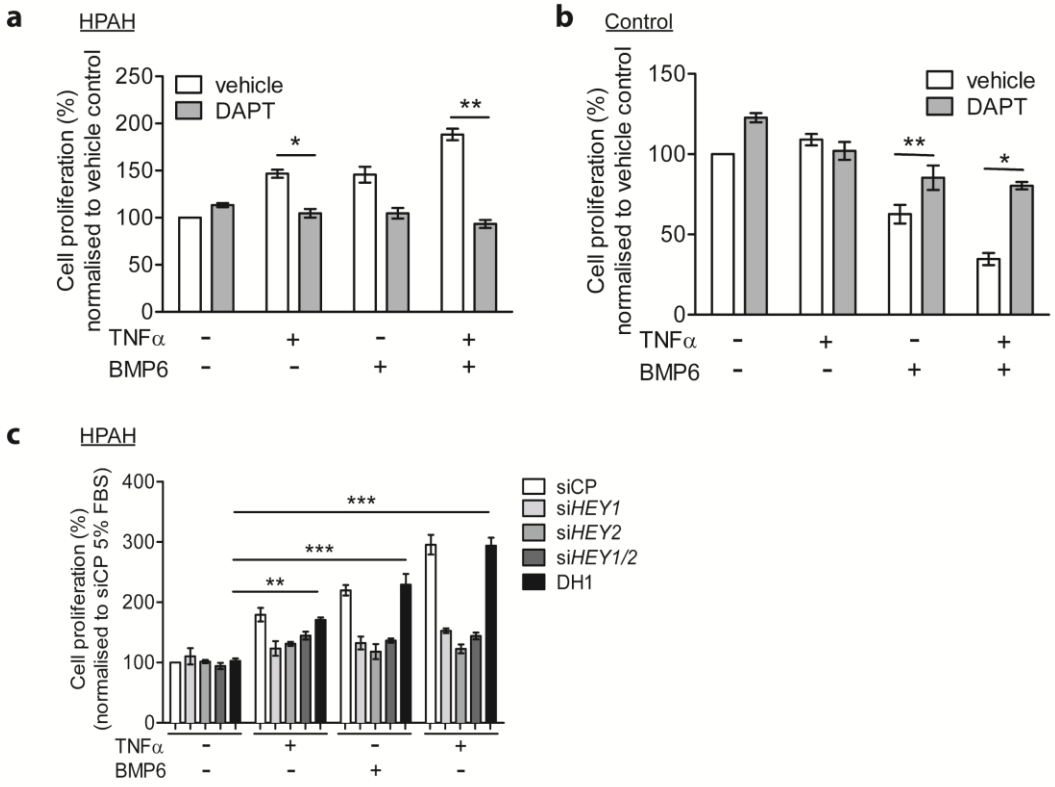
Supplementary Figure 12. *NOTCH* and its targets are altered by TNFα in HPAH PASMCs. (**a**-**f**) *NOTCH1* (**a**), *NOTCH2* (**b**), *NOTCH3* (**c**), *HEY1* (**d**), *HEY2* (**e**) and *HES1* (**f**) mRNA expression, normalized to *ACTB*, in human dPASMCs from disease-free controls and HPAH patients stimulated with TNFα (1 ng mL^{-1}) and/or BMP2 or BMP6 (both 10 ng mL^{-1}) for 1 h as indicated. One-way ANOVA with post-hoc Tukey's for multiple comparisons used in **a**, **b**, **c**, **d**, **e** and **f**. *$P \leq 0.05$, **$P \leq 0.01$, ***$P \leq 0.001$. Error bars represent mean ± s.e.m.



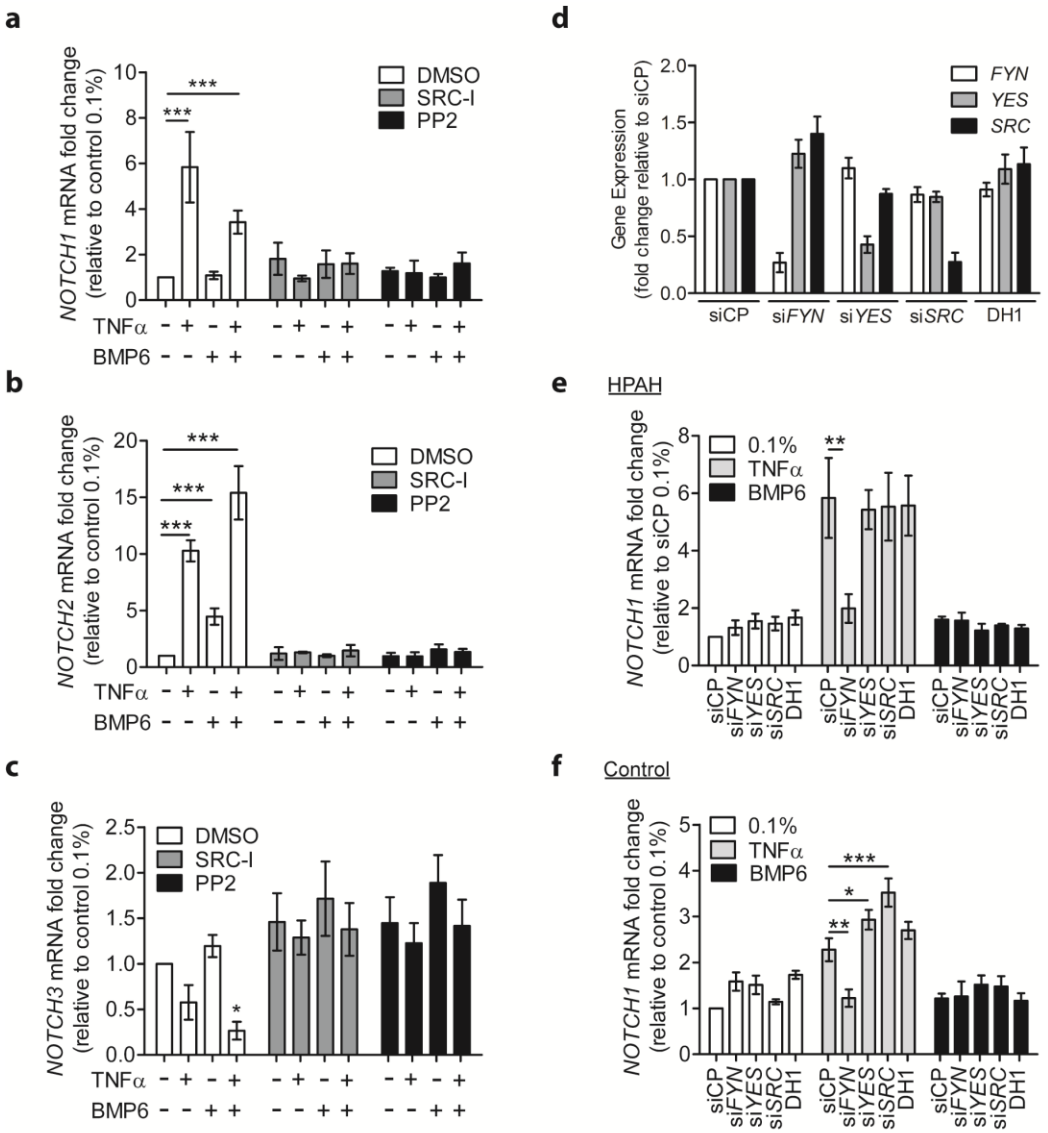
Supplementary Figure 13. *HEY1* and *HEY2* are targets of *NOTCH2*; *HES1* is a target of *NOTCH3*. (**a** - **c**) *HEY1* (**a**), *HEY2* (**b**) and *HES1* (**c**) mRNA expression, normalized to *ACTB*, in human HPAH dPASMCs transfected with DharmaFECT1™ alone (DH1), si*NOTCH2* or non-targeting siRNA control (siCP) and followed by treatment with TNFα (1 ng mL) and/or BMP6 (10 ng mL^{-1}) for 1 h as indicated (n = 3). (**d** - **f**) *HEY1* (**d**), *HEY2* (**e**) and *HES1* (**f**) mRNA expression, normalized to *ACTB*, in human HPAH dPASMCs transfected with DharmaFECT1™ alone (DH1), si*NOTCH3* or non-targeting siRNA control (siCP) followed by treatment with TNFα (1 ng mL^{-1}) and/or BMP6 (10 ng mL^{-1}) for 1 h as indicated (n = 3). (**g**) Immunoblot of NOTCH2 and NOTCH3 cleaved/transmembrane intracellular (NTM) regions in human HPAH dPASMCs transfected with DH1 alone , si*NOTCH2*, si*NOTCH3* or siCP . One-way ANOVA with post-hoc Tukey's for multiple comparisons used in **a**, **b** and **f**. *$P \leq 0.05$, **$P \leq 0.01$, ***$P \leq 0.001$. Error bars represent mean ± s.e.m.



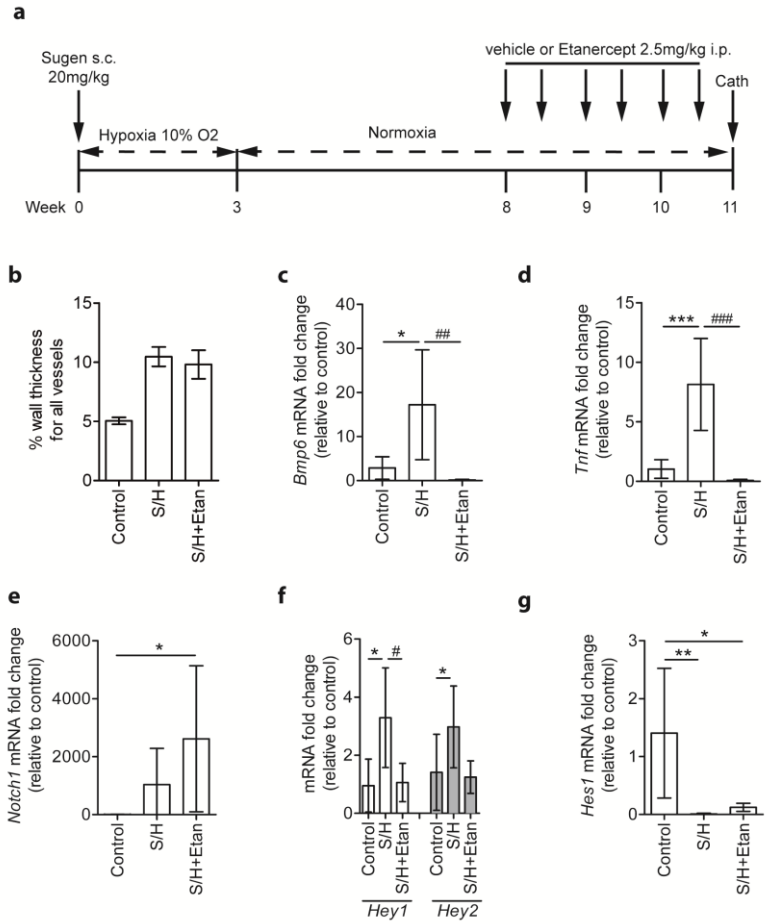
Supplementary Figure 14. TNFα alters *NOTCH* expression differentially in *BMPR2* deficiency. (**a** - **c**) *NOTCH1* (**a**), *NOTCH2* (**b**) and *NOTCH3* (**c**) mRNA expression, normalized to *ACTB*, in human control dPASMCs transfected with DharmaFECT1™ alone (DH1), si*BMPR2*, si*ACVR2A*, combined si*BMPR2* + si*ACVR2A* or non-targeting siRNA control (siCP) followed by treatment with TNFα (1 ng mL^{-1}) and/or BMP6 (10 ng mL^{-1}) for 1 h as indicated (n = 3; n = 4 for NOTCH3). (**d** and **e**) Representative immunoblots of NOTCH1 NTM region in (**d**) human disease-free control PASMCs following transfection with DH1 Alone, si*BMPR2*, or siCP or (**e**) HPAH dPASMCs following transfection with DH1 alone , si*ACVR2A*, or siCP followed by treatment with TNFα (1 ng mL^{-1}) and/or BMP6 (10 ng mL) for 1 h as indicated. Reprobed for α-tubulin to ensure equal loading. The data shown are representative of three experiments. Note that a consistent increase of NOTCH1 NTM region was observed with siCP transfection in HPAH PASMCs at baseline. (**f**) Immunoblots of Notch2 and Notch3 cleaved/transmembrane intracellular (NTM) regions for expression in lungs and livers isolated from 8-9 week old *Bmpr2*$^{+/+}$, *SP-C/Tnf/Bmpr2*$^{+/+}$, *Bmpr2*$^{+/-}$ and *SP-C/Tnf/Bmpr2*$^{+/-}$ transgenic mice (n = 3 per group). Blots were reprobed for β-actin to ensure equal loading. (**g** and **h**) *Notch2* and *Notch3* mRNA expression, normalized to *Actb*, in livers isolated from 8-9 week old *Bmpr2*$^{+/+}$, *SP-C/Tnf/Bmpr2*$^{+/+}$, *Bmpr2*$^{+/-}$ and *SP-C/Tnf/Bmpr2*$^{+/-}$ transgenic mice (n = 4). One-way ANOVA with post-hoc Tukey's for multiple comparisons used in **a**, **b**, **c**, **g** and **h**. *$P \leq 0.05$, **$P \leq 0.01$, ***$P \leq 0.001$. Error bars represent mean ± s.e.m.



Supplementary Figure 15. DAPT inhibits TNFα influence on PASMC proliferation. (**a** and **b**) Day 6 assessment of human HPAH (**a**) and control (**b**) dPASMCs proliferation following pre-treatment with DAPT (5 µM) for 30 min before subsequent TNFα (1 ng mL^{-1}) and/or BMP6 (50 ng mL^{-1}) treatment for 24 h (n = 3; Student's t-test). (**c**) Proliferation of human HPAH dPASMCs on day 6 following transfection with DharmaFECT1^{TM} alone (DH1), si*HEY1*, si*HEY2*, si*HEY1*+si*HEY2* (si*HEY1/2*) or non-targeting siRNA control (siCP) and treatment every 48 h with TNFα (1 ng mL^{-1}) and/or BMP6 (50 ng mL^{-1}) as indicated (n = 3; one-way ANOVA with post-hoc Tukey's for multiple comparisons). *$P \leq 0.05$, **$P \leq 0.01$, ***$P \leq 0.001$. Error bars represent mean ± s.e.m.



Supplementary Figure 16. Inhibition of SRC kinases reverses TNFα and BMP6 regulation of *NOTCH*. (**a** - **c**) *NOTCH1* (**a**), *NOTCH2* (**b**) and *NOTCH3* (**c**) mRNA expression, normalized to *ACTB*, in human HPAH dPASMCs pre-incubated with SRC-I (1μM) or PP2 (250 nM) in DMSO for 1 h before stimulation with TNFα (1 ng mL^{-1}) and/or BMP6 (10 ng mL^{-1}) for 1 h as indicated (n = 3; one-way ANOVA with post-hoc Tukey's for multiple comparisons). (**d**) Human *FYN*, *YES*, and *SRC* mRNA expression in control dPASMCs following transfection with DharmaFECT1™ alone (DH1), si*FYN*, si*YES*, si*SRC* or non-targeting siRNA control (siCP). (**e** and **f**) *NOTCH1* mRNA expression, normalized to *ACTB*, in control (**e**) and HPAH (**f**) human dPASMCs following transfection with DH1 alone, si*FYN*, si*YES*, si*SRC* or siCP and treated with TNFα (1 ng mL^{-1}) and/or BMP6 (10 ng mL^{-1}) for 1 h as indicated (n = 3; one-way ANOVA with post-hoc Tukey's for multiple comparisons). *$P \leq 0.05$, **$P \leq 0.01$, ***$P \leq 0.001$. Error bars represent mean ± s.e.m.



Supplementary Figure 17. Etanercept reverses established pulmonary hypertension in the Sugen-hypoxia model. (**a**) Rats were given vehicle injections and maintained in normoxia (Control, n = 6) or challenged with SU-5416 (20 mg/kg, s.c.) and 3 weeks of hypoxia (10% O2) before 5 weeks of normoxia and 3 weeks of biweekly treatment with saline vehicle (S/H, n = 9) or etanercept (S/H+Etan, n = 9; 2.5 mg/kg, i.p.). (**b**) Assessment of pulmonary arterial wall thickness as a percentage of luminal diameter. (**c** - **g**) *Bmp6* **(c)**, *Tnf* **(d)**, *Notch1* **(e)**, *Hey1* and *Hey2* **(f)** and *Hes1* **(g)** mRNA expression, normalized to *Actb*, in lungs isolated from control, S/H and S/H+Etan rats (n = 6). One-way ANOVA with post-hoc Tukey's for multiple comparisons. S/H = Sugen-hypoxia, S/H+Etan = Sugen-hypoxia + Etanercept */#$P \leq 0.05$, **/##$P \leq 0.01$, ***/###$P \leq 0.001$. Error bars represent mean $\pm$ s.e.m.

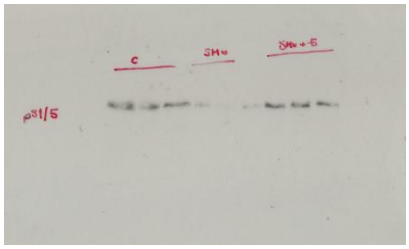
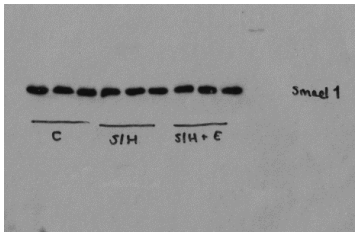
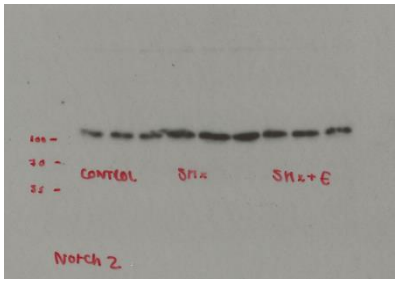
b) Figure 6e_pSmad1/5



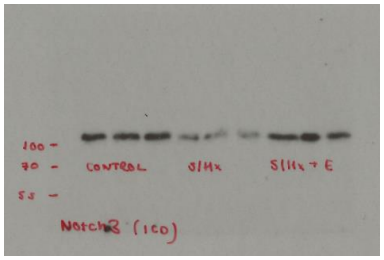
c) Figure 6e_Smad1



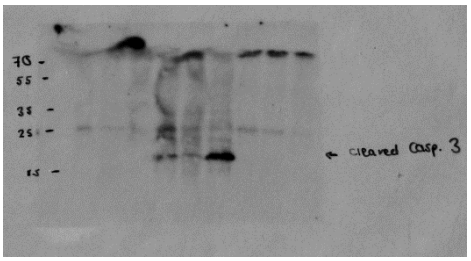
d) Figure 6e_Notch2



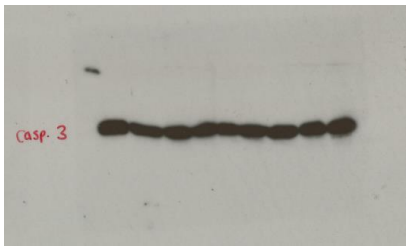
e) Figure 6e_Notch3



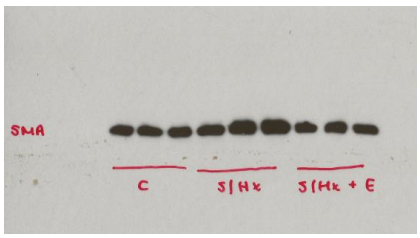
f) Figure 6e_Cleaved caspase-3



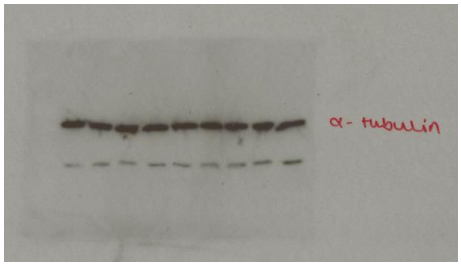
g) Figure 6e_caspase-3



h) Figure 6e_alpha-SMA

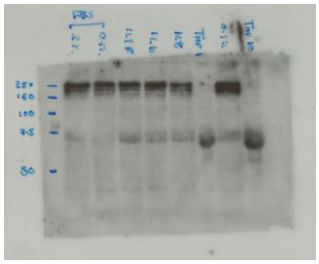


i) Figure 6e_alpha tubulin

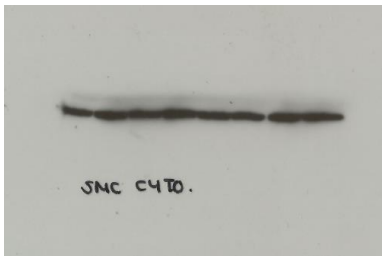


Supplementary Figure 27. Uncropped western blots for Figure 6e. The relevant figures are indicated in the blot titles.

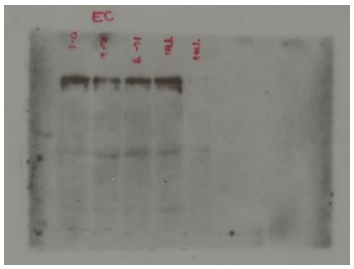
a) Supplement Fig 1a_BMPR-II



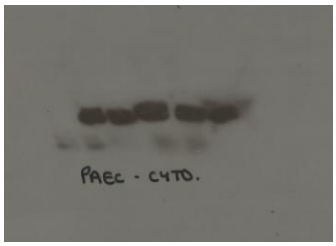
b) Supplement Fig 1a_alpha tubulin



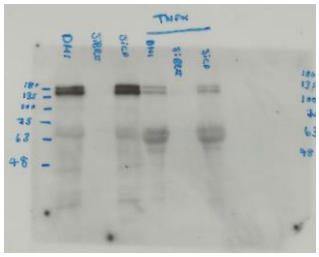
c) Supplement Fig 1b_BMPR-II



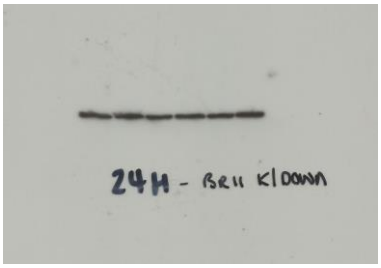
d) Supplement Fig 1b_alpha tubulin



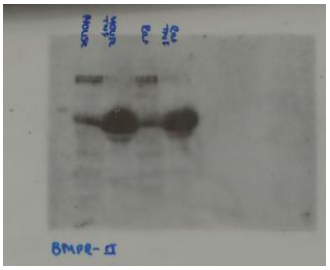
e) Supplement Fig 2a_BMPR-II



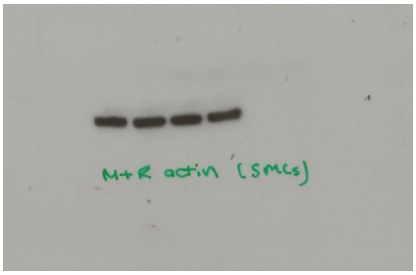
f) Supplement Fig 2a_alpha tubulin



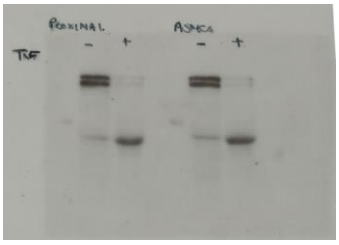
g) Supplement Fig 2b_BMPR-II



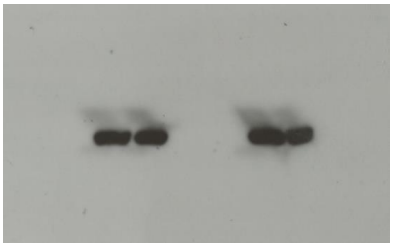
h) Supplement Fig 2b_alpha tubulin



i) Supplement Fig 2c_BMPR-II

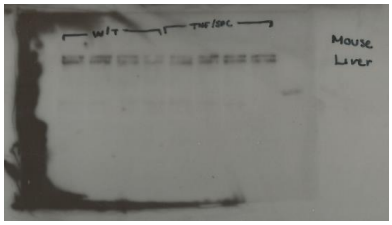


j) Supplement Fig 2c_alpha tubulin

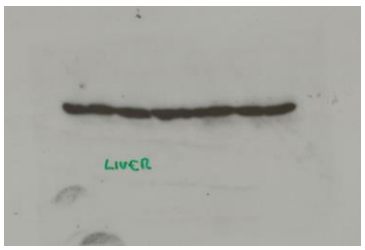


Supplementary Figure 28. Uncropped western blots for Supplementary Figures 1a, 1b, 2a, 2b and 2c. The relevant figures are indicated in the blot titles.

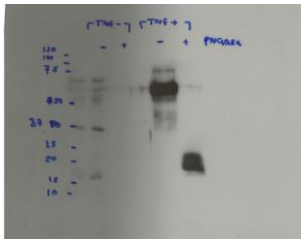
a) Supplement Fig 3e_BMPR-II



b) Supplement Fig 3e_alpha tubulin

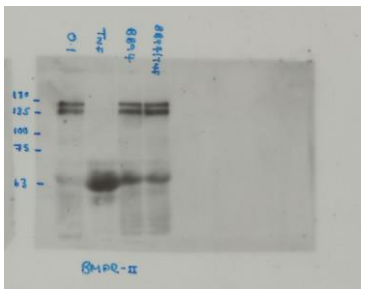


c) Supplement Fig 4a_MYC

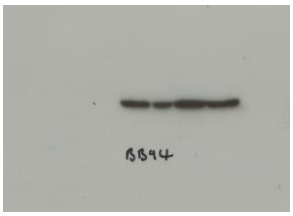


d) Supplement Fig 4a_Coomassie

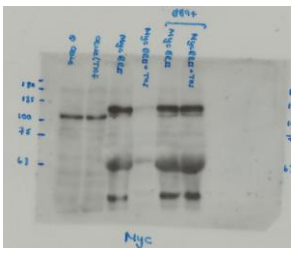
e) Supplement Fig 4c_BMPR-II IB:MYC



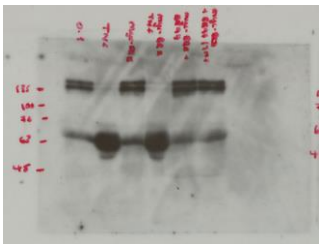
f) Supplement Fig 4c_alpha tubulin



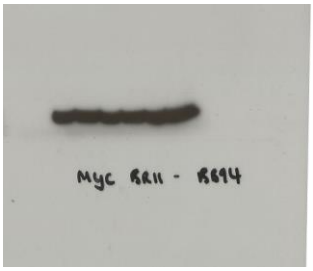
g) Supplement Fig 4d_WCL:MYC



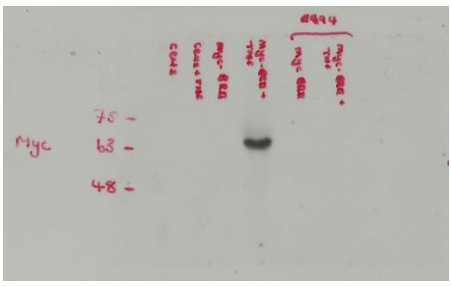
h) Supplement Fig 4d WCL:BMPR-II



i) Supplement Fig 4d_alpha tubulin

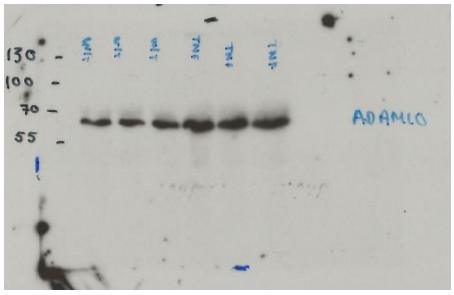


j) Supplement Fig 4d_IP:BMPR-II

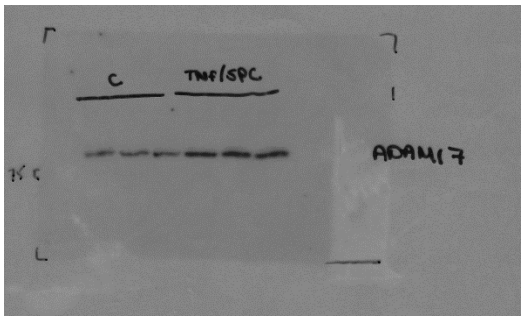


Supplementary Figure 29. Uncropped western blots for Supplementary Figures 3e, 4a, 4c and 4d. The relevant figures are indicated in the blot titles.

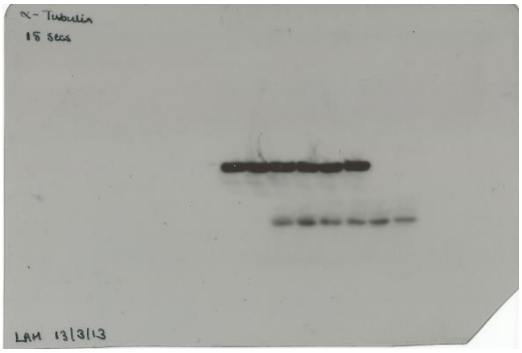
a) Supplement Fig 5c_ADAM10



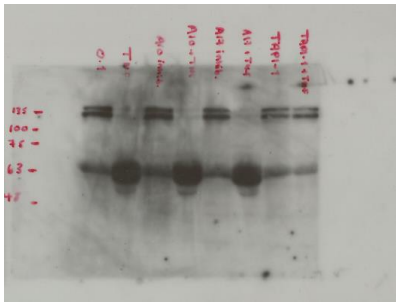
b) Supplement Fig 5c_ADAM17



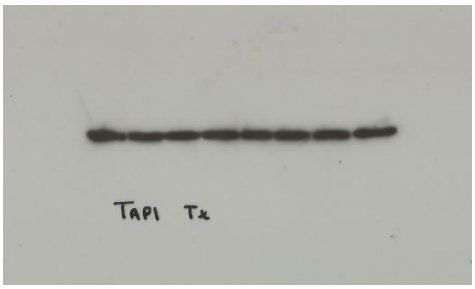
c) Supplement Fig 5c_beta actin



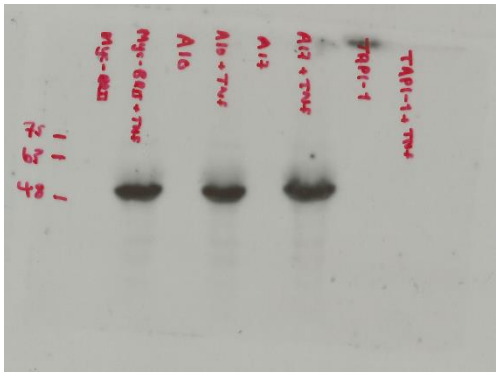
d) Supplement Fig 5e_BMPR-II



e) Supplement Fig 5e_alpha tubulin

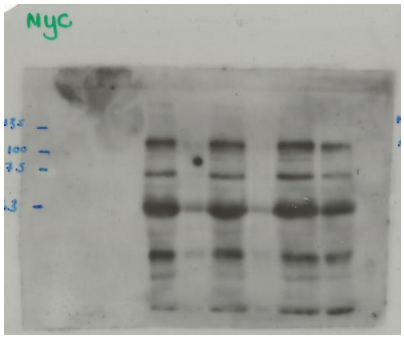


f) Supplement Fig 5e_IP:BMPR-II IB:MYC

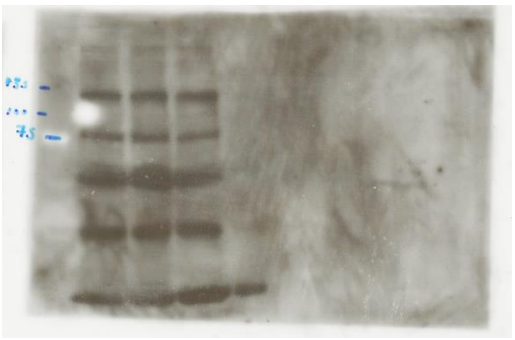


Supplementary Figure 30. Uncropped western blots for Supplementary Figures 5c and 5e. The relevant figures are indicated in the blot titles.

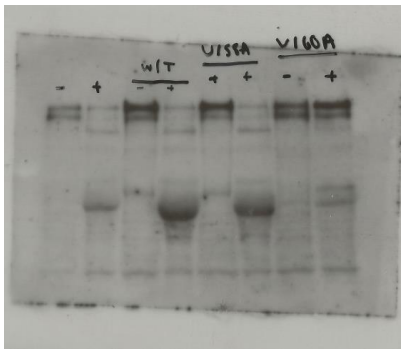
a) Supplement Fig 6b_WCL:MYC (left panel)



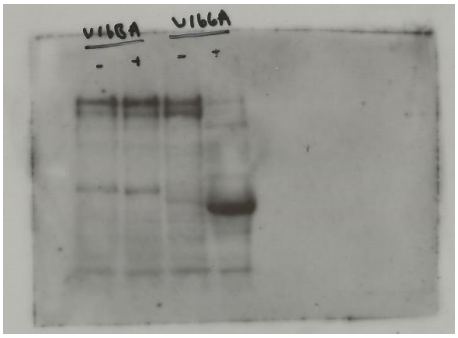
e) Supplement Fig 6b_WCL:MYC (right panel)



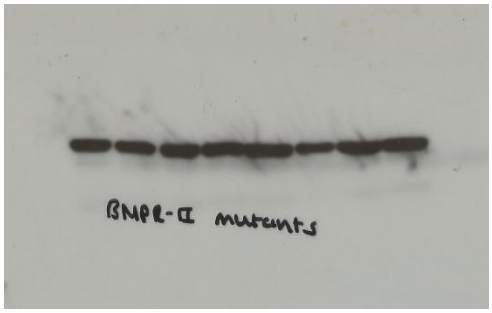
b) Supplement Fig 6b_BMPR-II (left panel)



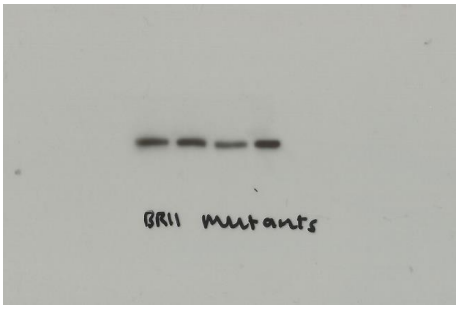
f) Supplement Fig 6b_BMPR-II (right panel)



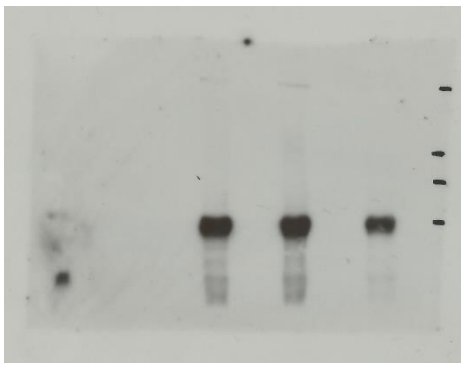
c) Supplement Fig 6b_alpha tubulin (left panel)



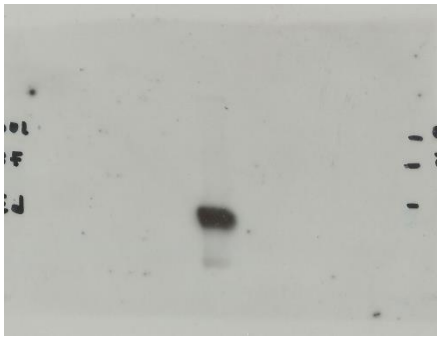
g) Supplement Fig 6b_alpha tubulin (right panel)



d) Supplement Fig 6b_IB:MYC (left panel)

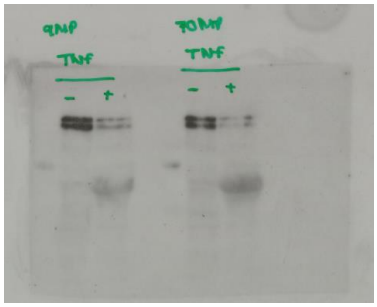


h) Supplement Fig 6b_IB:MYC (right panel)

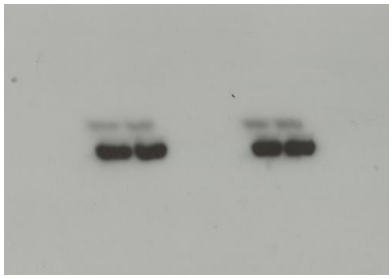


Supplementary Figure 31. Uncropped western blots for Supplementary Figures 5c and 5e. The relevant figures are indicated in the blot titles.

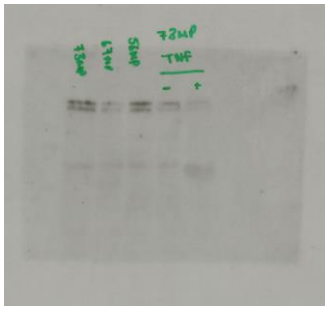
a) Supplement Fig 7a_BMPR-II (left panel)



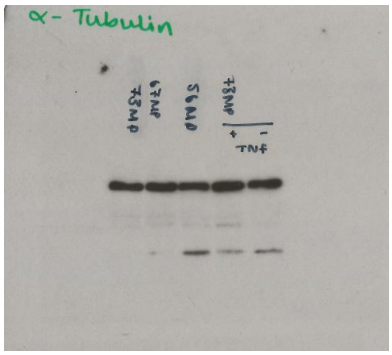
b) Supplement Fig 7a_alpha tubulin (left panel)



c) Supplement Fig 7a_BMPR-II (right panel)

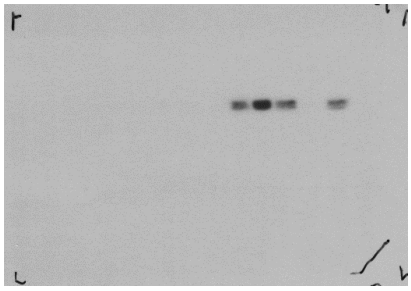


d) Supplement Fig 7a_alpha tubulin (right panel)

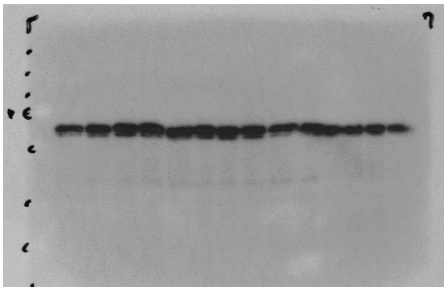


Supplementary Figure 32. Uncropped western blots for Supplementary Figures 7a. The relevant figures are indicated in the blot titles.

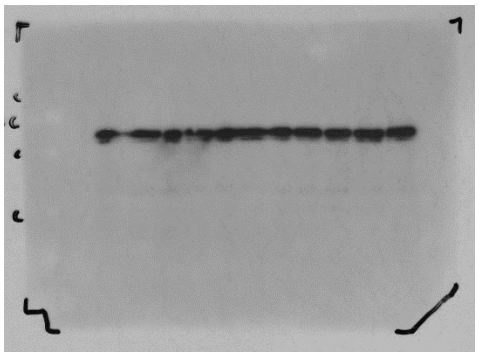
a) Supplement Fig 7b_pSMAD1/5 (left panel)



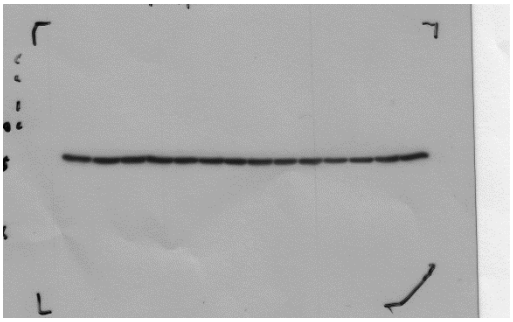
e) Supplement Fig 7b_tSMAD1 (right panel)



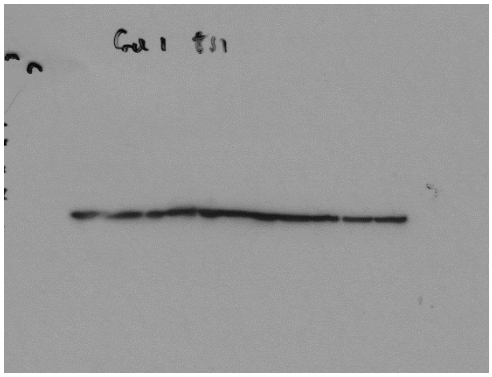
b) Supplement Fig 7b_tSMAD1 (left panel)



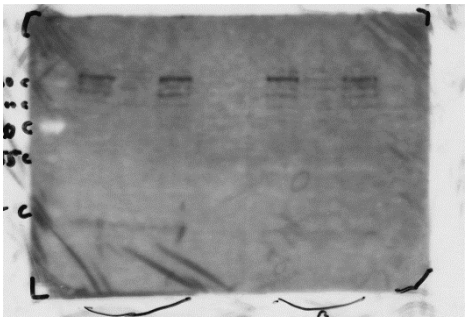
f) Supplement Fig 7b_alpha tubulin (right panel)



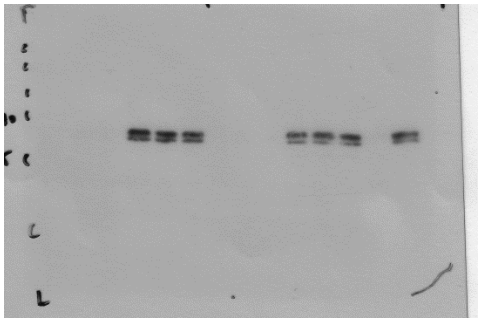
c) Supplement Fig 7b_alpha tubulin (left panel)



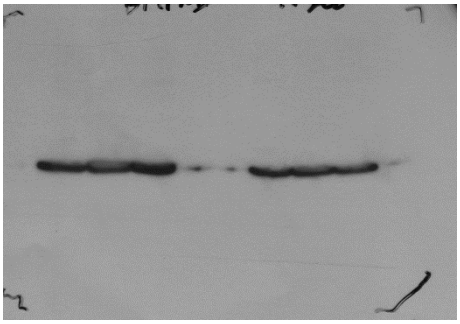
g) Supplement Fig 7c_BMPR-II



d) Supplement Fig 7b_pSMAD1/5 (right panel)

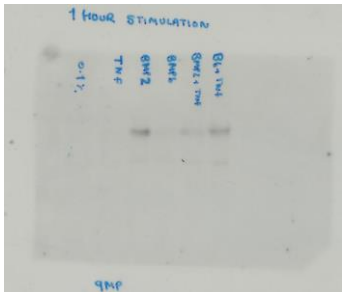


h) Supplement Fig 7c_alpha tubulin

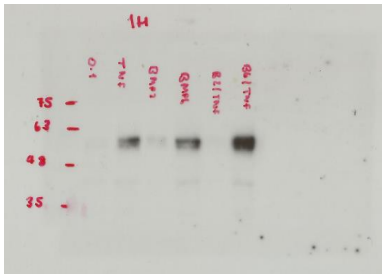


Supplementary Figure 33. Uncropped western blots for Supplementary Figures 7b and 7c. The relevant figures are indicated in the blot titles.

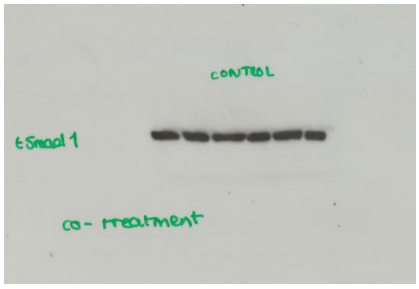
a) Supplement Fig 7d_pSMAD1/5 (right panel)



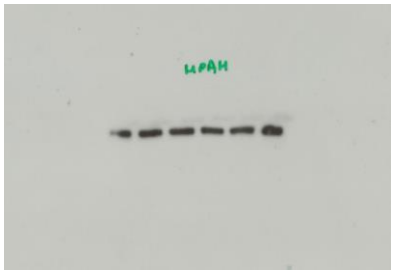
e) Supplement Fig 7d_pSMAD1/5 (left panel)



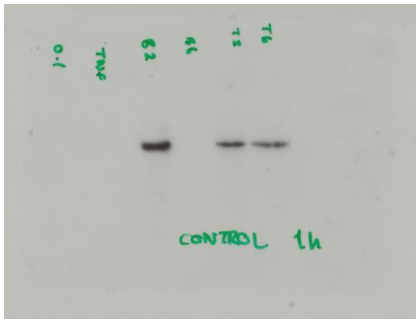
b) Supplement Fig 7d_tSMAD1 (right panel)



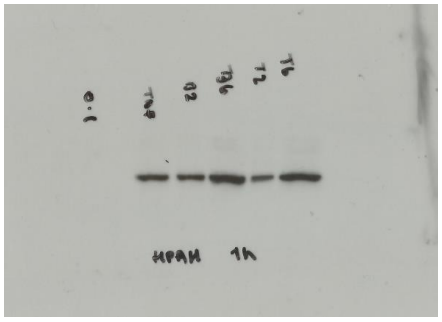
f) Supplement Fig 7d_tSMAD1 (left panel)



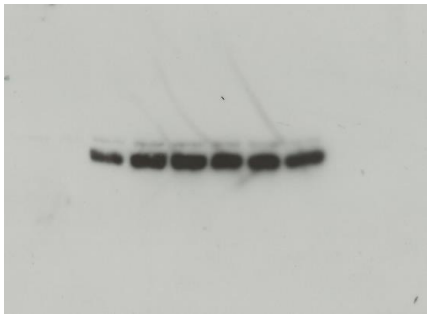
c) Supplement Fig 7d_ID1 (right panel)



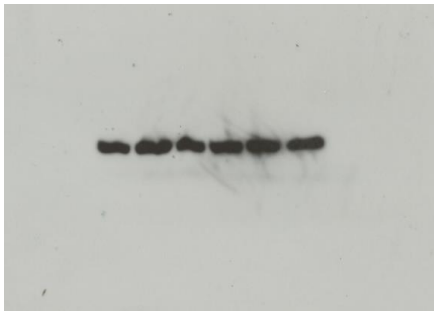
g) Supplement Fig 7d_ID1 (left panel)



d) Supplement Fig 7d_alpha tubulin (right panel)

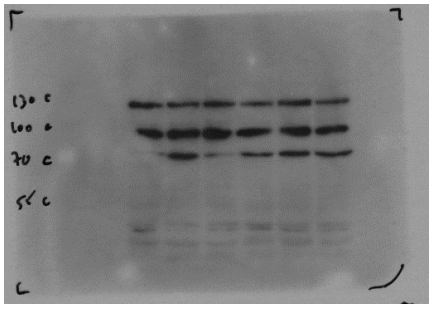


h) Supplement Fig 7d_alpha tubulin (left panel)

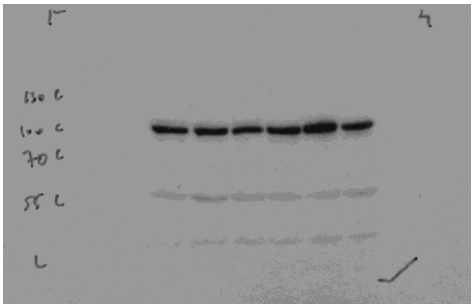


Supplementary Figure 34. Uncropped western blots for Supplementary Figure 7d. The relevant figures are indicated in the blot titles.

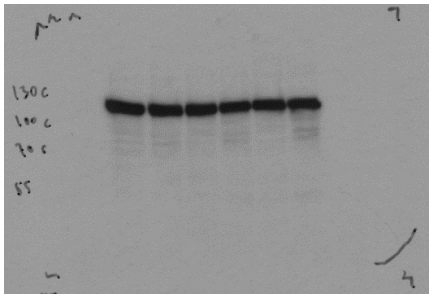
a) Supplement Fig 11a_NOTCH1



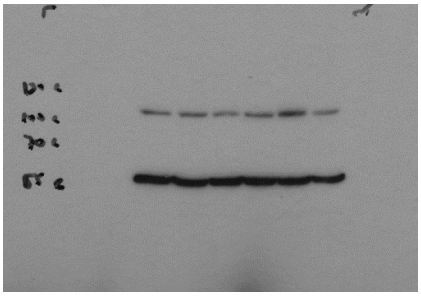
c) Supplement Fig 11a_NOTCH3



b) Supplement Fig 11a_NOTCH2

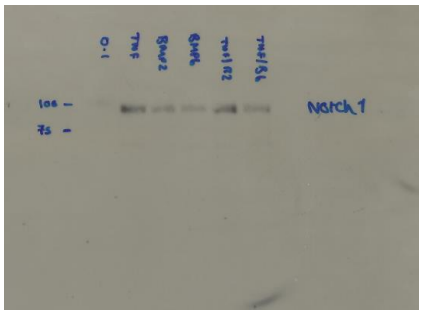


d) Supplement Fig 11a_alpha tubulin

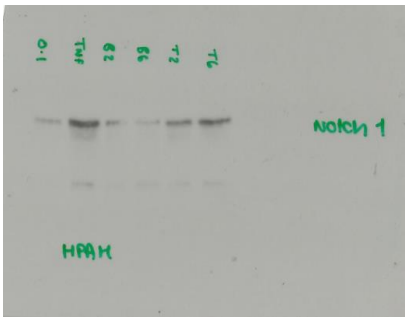


Supplementary Figure 35. Uncropped western blots for Supplementary Figure 11a. The relevant figures are indicated in the blot titles.

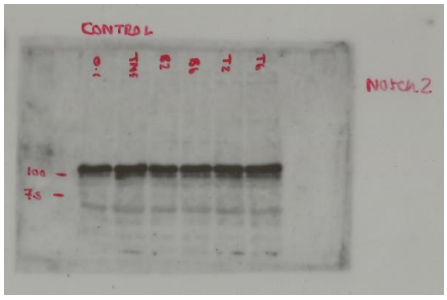
a) Supplement Fig 11c_NOTCH1 (left panel)



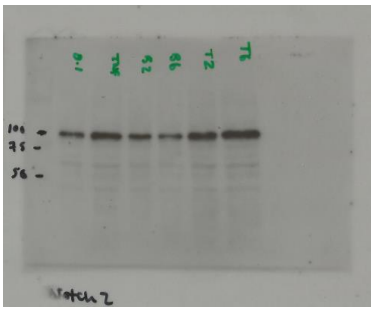
e) Supplement Fig 11c_NOTCH1 (right panel)



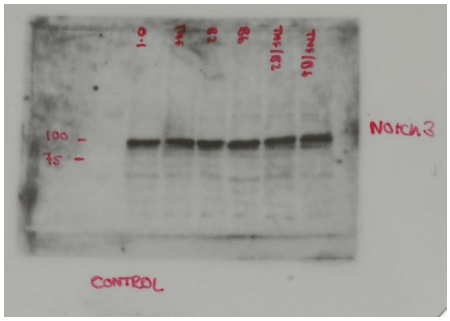
b) Supplement Fig 11c_NOTCH2 (left panel)



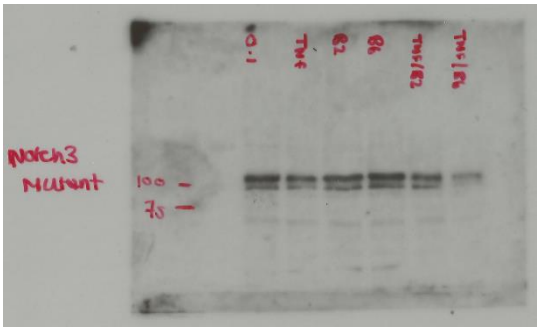
f) Supplement Fig 11c_NOTCH2 (right panel)



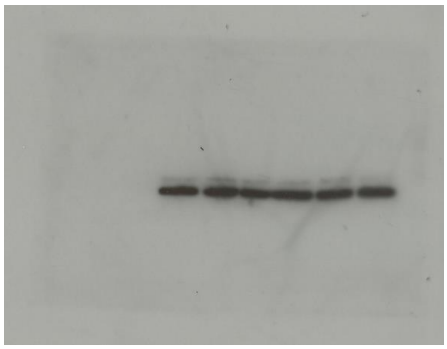
c) Supplement Fig 11c_NOTCH3 (left panel)



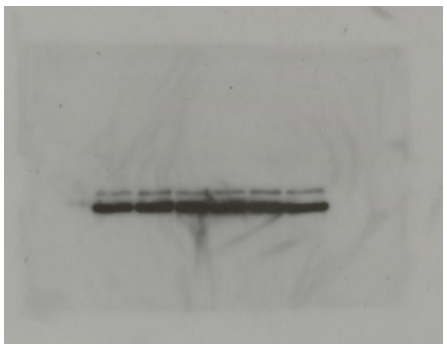
g) Supplement Fig 11c_NOTCH3 (right panel)



d) Supplement Fig 11c_alpha tubulin (left panel)

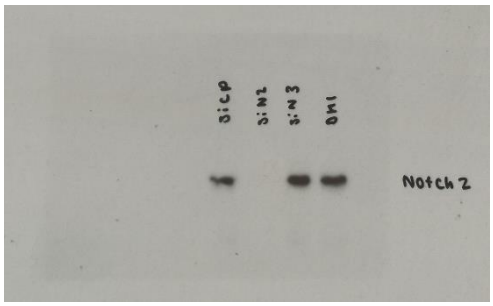


h) Supplement Fig 11c_alpha tubulin (right panel)

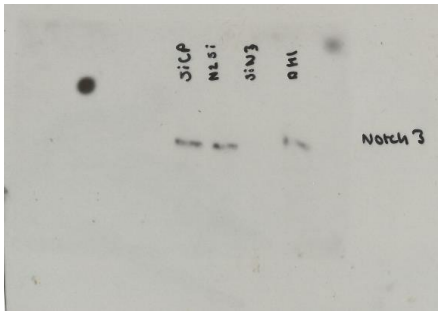


Supplementary Figure 36. Uncropped western blots for Supplementary Figure 11c. The relevant figures are indicated in the blot titles.

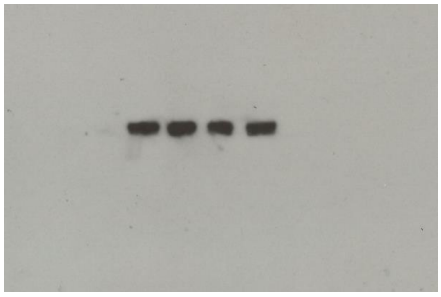
a) Supplement Fig 13g_NOTCH2 panel)



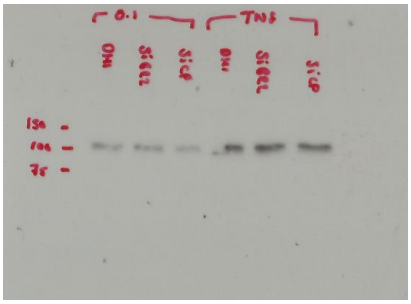
b) Supplement Fig 13g_NOTCH3



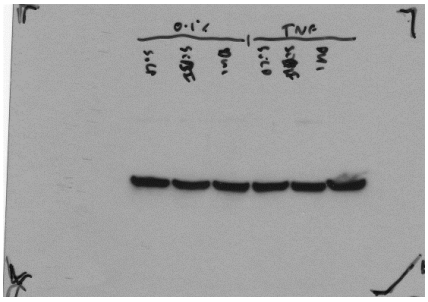
c) Supplement Fig 13g_alpha tubulin



d) Supplement Fig 14d_NOTCH1 (left

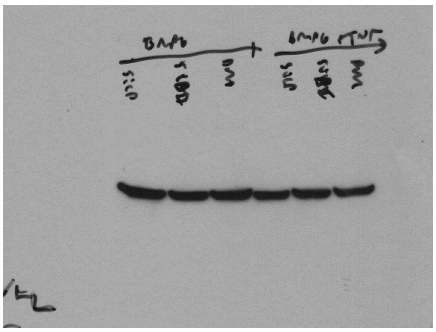


e) Supplement Fig 14d_alpha tubulin (left panel)



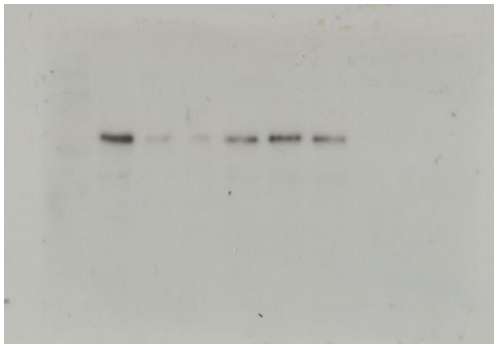
f) Supplement Fig 14d_NOTCH1 (right panel)

g) Supplement Fig 14d_alpha tubulin (right panel)

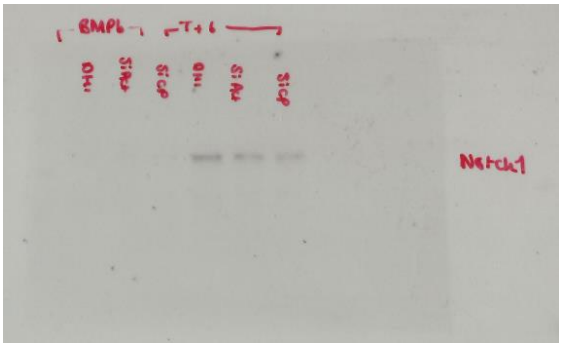


Supplementary Figure 37. Uncropped western blots for Supplementary Figures 13g and 14d. The relevant figures are indicated in the blot titles.

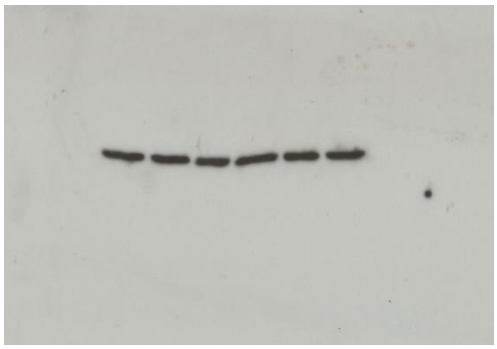
a) Supplement Fig 14e_NOTCH1 (left panel)



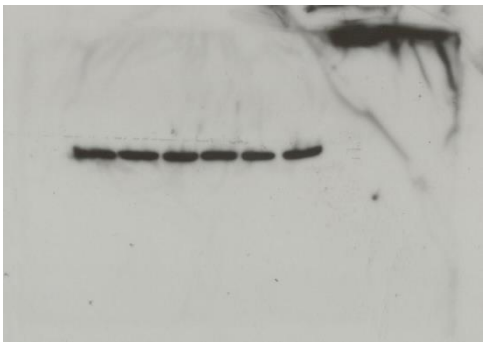
c) Supplement Fig 14e_NOTCH1 (right panel)



b) Supplement Fig 14e_alpha tubulin (left panel)

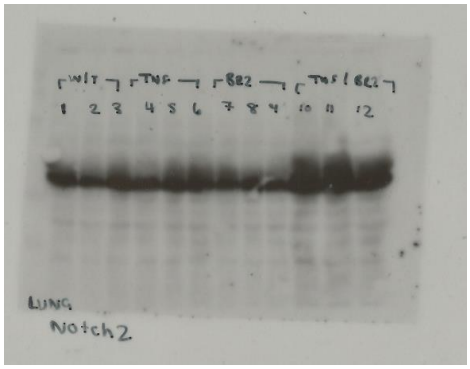


d) Supplement Fig 14e_alpha tubulin (right panel)

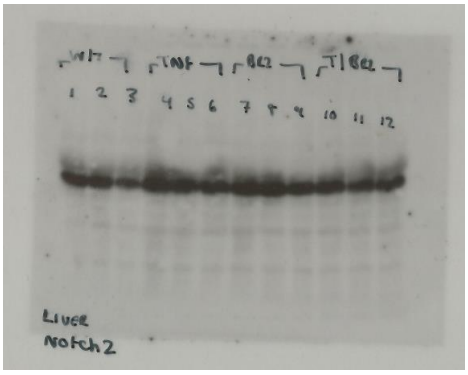


Supplementary Figure 38. Uncropped western blots for Supplementary Figure 14e. The relevant figures are indicated in the blot titles.

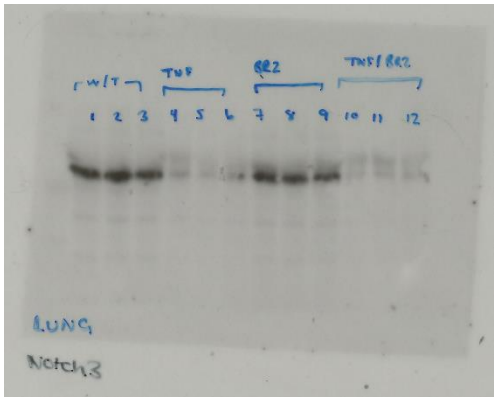
a) Supplement Fig 14f_NOTCH2 (left panel)



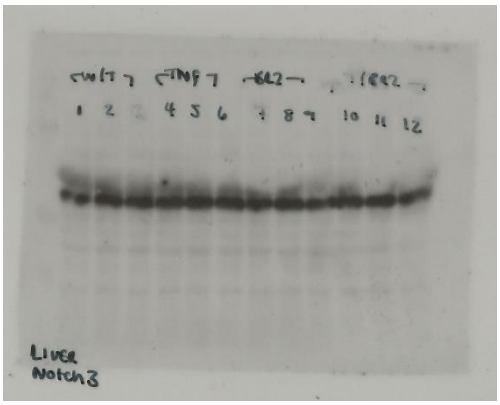
d) Supplement Fig 14f_NOTCH2 (right panel)



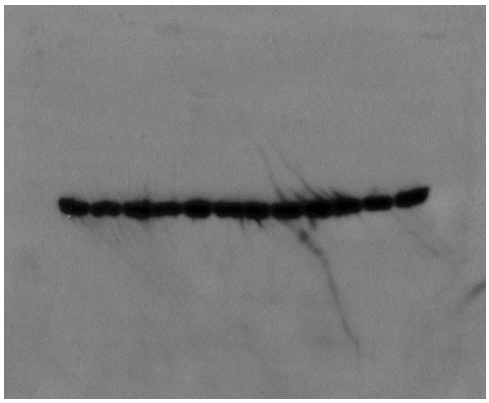
b) Supplement Fig 14f_NOTCH3 (left panel)



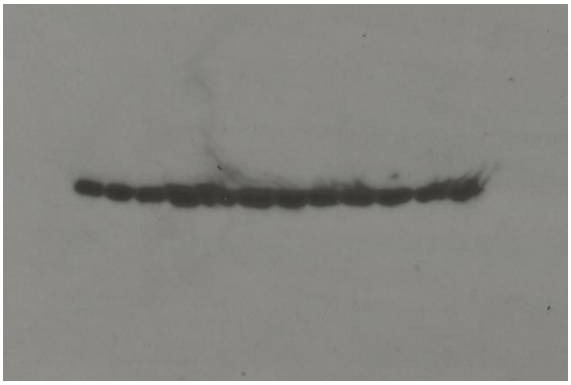
e) Supplement Fig 14f_NOTCH3 (right panel)



c) Supplement Fig 14f_alpha tubulin (left panel)



f) Supplement Fig 14f_alpha tubulin (right panel)



Supplementary Figure 39. Uncropped western blots for Supplementary Figure 14f. The relevant figures are indicated in the blot titles.

Supplementary Table 1: Left ventricular function in the Sugen-hypoxia rat model

		Sugen + Hypoxia - 11 weeks	
	Control	**Vehicle**	**Etanercept**
n	6	7	8
Heart rate (bpm)	445.3 ± 22.4	425.5 ± 45.9	373.1 ± 68.4*
LVESP (mmHg)	107.4 ± 10.7	104.5 ± 22.8	105.3 ± 14.5
LVEDP (mmHg)	21.59 ± 9.78	14.45 ± 8.36	17.18 ± 7.85
Stroke Volume (RVU)	19.23 ± 4.30	22.38 ± 5.34	23.04 ± 8.75
Cardiac Output (RVU/min)	8581 ± 2030	9450 ± 2360	8253 ± 2471
dP/dt max (mmHg s^{-1})	6835 ± 799	6363 ± 1574	6470 ± 1084
Blood Pressure (mmHg)	100.0 ± 3.69	101.0 ± 6.90	100.6 ± 10.0

+/- SEM, *P<0.05 relative to control
LVESP: Left Ventricular End-Systolic Pressure
LVEDP: Left Ventricular End-Diastolic Pressure
RVU: Relative volume units

Supplementary Table 2: Pulmonary arterial smooth muscle cell clinical information

Subject ID	**Sex**	**Age**	***BMPR2* Mutation**	**Clinical Details**
Control PASMCs				
9MP	M	72	-	Adenocarcinoma
32MP	F	58	-	Emphysema
70MP	M	66	-	Squamous cell carcinoma
HPAH PASMCs				
56MP	M	58	C347R	FPAH; transplant
67MP	M	22	W9X	FPAH; transplant
73MP	F	30	R899X	FPAH; transplant

Supplementary Table 3. Mutagenesis primers for myc-tagged BMPR-II valine-alanine plasmids.

Mutation	**Forward**	**Reverse**
