

**S2 Fig. HAdV concentration measured by qPCR.** (A) HAdV concentration in extracts obtained by using four different concentration methods and (B) extraction methods. The bar, box, whiskers and circles represents median, inter-quartile range, inter-quartile range times 1.5, and outliers, respectively. Asterisks represent significance level of a pairwise t-test with “Holm-Bonferroni” adjusted p-values. \*\* =  $p < 0.01$ , \*\*\* =  $p < 0.001$ .
