

S4 Fig. Analytical HPLC chromatograms from the urine of mice obtained at 1h (A) and 4h (B) post *iv* injection of [Nle¹⁴, ¹²⁴I-Tyr⁴⁰-NH₂]Ex-4. Note that apart from ¹²⁴I-iodide (peak at 2.38 min), neither the intact tracer (HPLC retention time ~23 min; see Fig. 3 in the main manuscript) nor other radioactive metabolites were found.
