Accessions in bold were sequenced for the complete *FLC* region. Accessions in italics were genotyped for *FLC* SNPs with dCAPS. Accessions marked with an asterisk belong to a single, unstratified population based on a Bayesian analysis (1) using 79 AFLP loci (2); these accessions were included in phenotypic association tests. Accessions with a dagger in the Insertion column could not be scored for presence or absence of a Da-type insertion.
