

Supplementary Figure 1

Supplementary Fig. S1. Serum-containing complete culture media were pre-incubated for 1 min with PEI-immobilized PSAM/polystyrene microfiber mesh (PEI Mesh). Human pancreatic cancer cell line PANC-1, human melanoma cell line WM266-4, mouse melanoma cell line B16-F10, mouse macrophage cell line RAW264.7 and mouse embryonic fibroblast were cultured for 3 days with either PEI Mesh-treated complete media or untreated complete media. The cell growth was determined using MTS assay.
