

Fig. S 2 Comparison of the O-LIFE scores reported by Mason & Claridge (1996) and the current study. Panels show the different subscales of the O-LIFE questionnaire, and boxplots show the 25th, 50th, 75th, and 90th percentiles for the “< 22” age group norms reported by Mason & Claridge (1996) and for those obtained in the current study, separated by gender.
