Nontransformed data for all subjects during adulthood (6-8 years) on the Human Intruder paradigm conditions Alone (A), Profile (P), and Stare (S). Freezing is measured in duration (seconds), whereas Hostile, Anxious, and Self-directed behaviors are measured in frequency count. Neo-C-7 has also been reported as Neo-C-11 in other publications (Weiss & Bachevalier, 2016; Weiss et al, 2016).
