

Fig. S1. **Quantification of *Klp61F* RNAi knockdown.** (A) Graph showing the relative gene expression of *Klp61F* in wild-type, single RNAi, and double RNAi oocytes, as measured by quantitative RT-PCR. (B) Western blot showing KLP61F protein levels in wild-type and single RNAi oocytes. Tubulin levels were used as a loading control. Numbers show quantification of relative band intensity using ImageJ.
