

## Factors predicting organ-specific distant metastasis in patients with completely resected lung adenocarcinoma

### Supplementary Materials

**Supplementary Table S1: Univariate analysis of association between clinicopathological variables and organ sites of metastasis in the validation cohort of patients with resected lung adenocarcinoma.** See Supplementary\_Table\_S1.

**Supplementary Table S2: Multivariate analysis of association between clinicopathological variables and organ sites of metastasis in the validation cohort of patients with resected lung adenocarcinoma**

Variables	Univariate		
	HR	95% CI	P value
<b>Contralateral lung metastasis</b>			
N2 (vs. N0 or N1)	29.185	6.917 to 123.146	< 0.001
<b>Brain metastasis</b>			
N2 (vs. N0 or N1)	11.638	2.256 to 60.028	0.003
Micropapillary predominant	8.035	1.025 to 63.005	0.047
Solid predominant	5.598	0.811 to 38.631	0.081
<b>Bone metastasis</b>			
Stage II or III (vs. stage I)	5.918	1.442 to 24.294	0.014

HR, Hazard ratio; CI, confidence interval.
