

Supplementary Figure 2

Supp. Fig. 2. GFP-DnaN expression in the swarm and liquid culture. Upper panel : *In situ* fluorescence microscopy images (100x) of a 1.5 cm swarm expressing a fluorescent GFP-DnaN fusion protein (strain SSB2022). The images taken in the body and at the tip of the dendrite are identical to those shown in Fig. 3.

The lower panel shows a control experiment where strain SSB2022 was grown in liquid culture (B-medium). Cells were taken either during exponential growth or from stationary phase and GFP-DnaN expression analysed by fluorescence microscopy under the same conditions as the swarming cells. The PC labeled images show the same cells imaged by phase contrast microscopy.
