

Additional file 4: Knock-down of JAB1 in human MΦ. PMA-differentiated human U937 MΦ were treated with HiPerfect Transfection Reagent (medium) (a), transfected with negative siRNA (nsiJAB1-MΦ) (b), siRNA JAB1 (siJAB1-MΦ) (c), or positive siRNA (cell death control) (d) for 48h. Representative images results from 5 independent experiments are shown. Bars: 20μm
