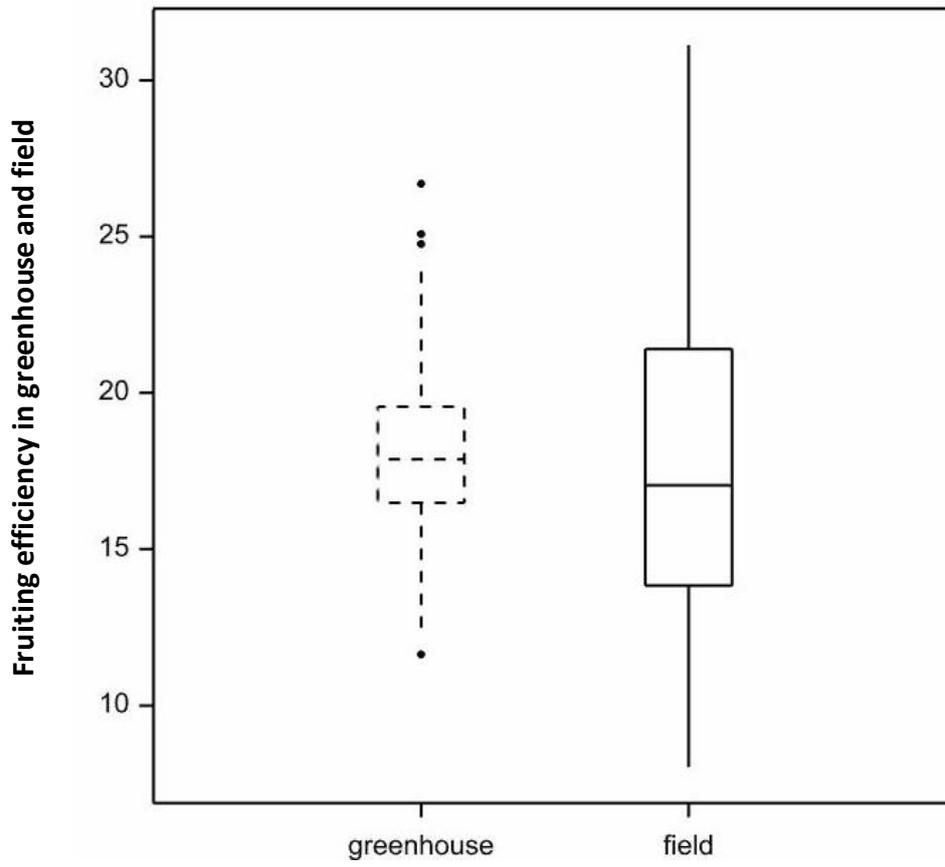

Fig. S1. Fruiting efficiency for the 30 cultivars in the greenhouse and field.

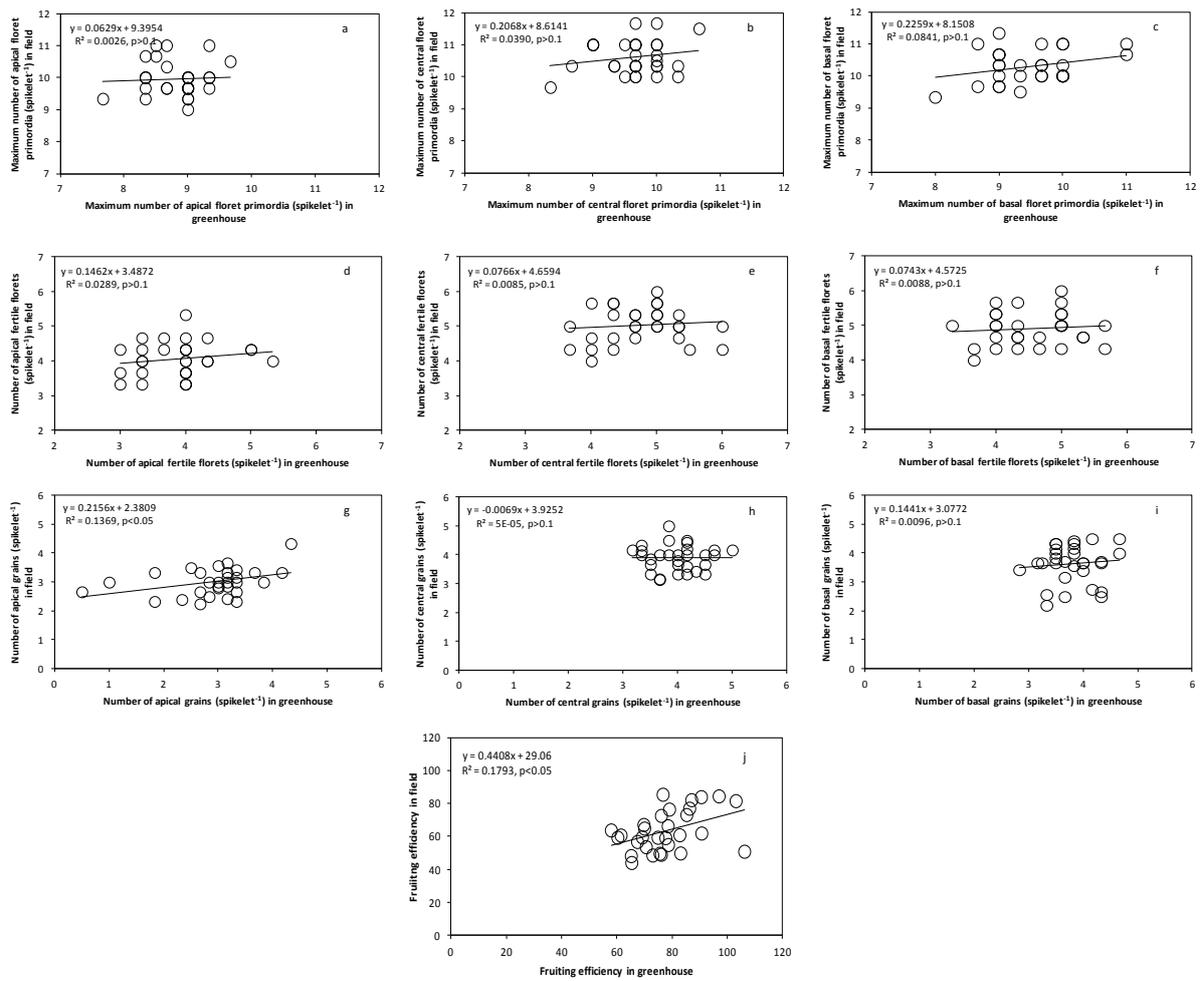

Fig. S2. Relationships of maximum number of floret primordia (spikelet⁻¹), number of fertile florets (spikelet⁻¹), number of grains (spikelet⁻¹) and fruiting efficiency between greenhouse and field.

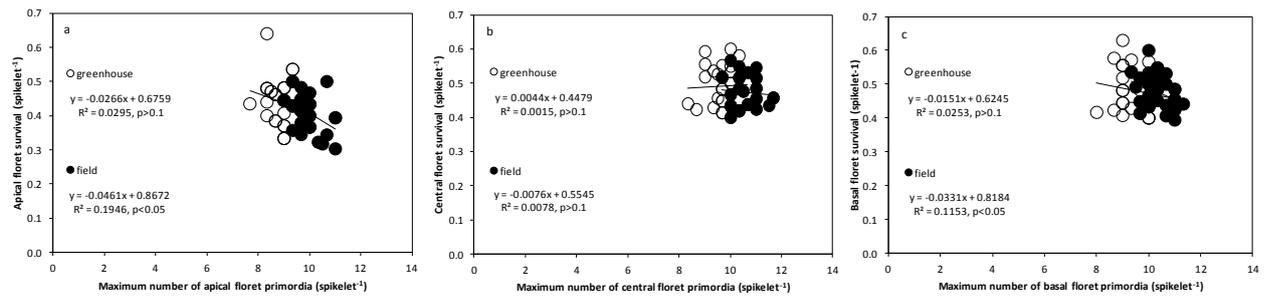

Fig. S3. Relationship between maximum number of floret primordia and floret survival within spikelet in apical, central and basal parts of spike under field and greenhouse conditions.

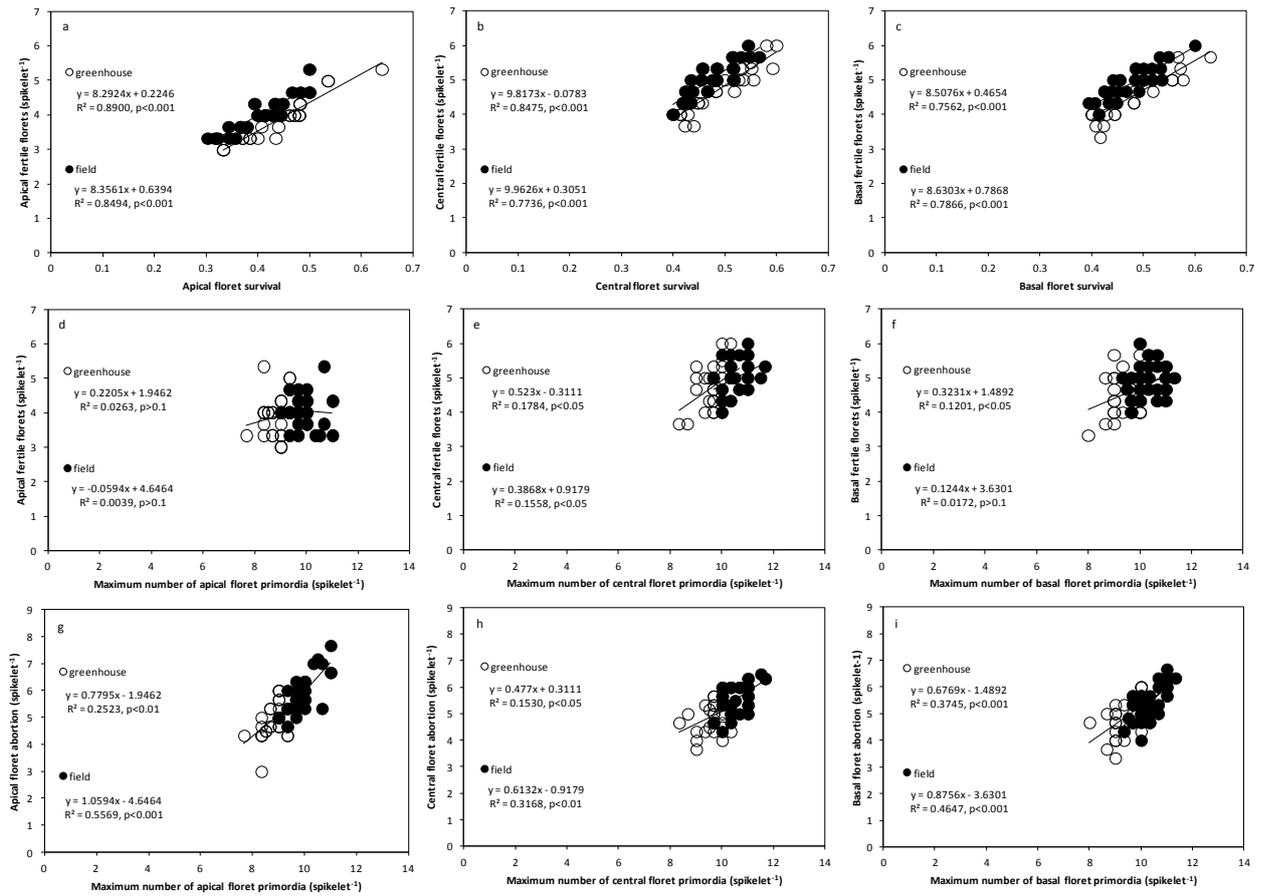

Fig. S4. Relationship between maximum number of floret primordia, fertile florets number and floret abortion within spikelet in apical, central and basal spikelets under field and greenhouse conditions.

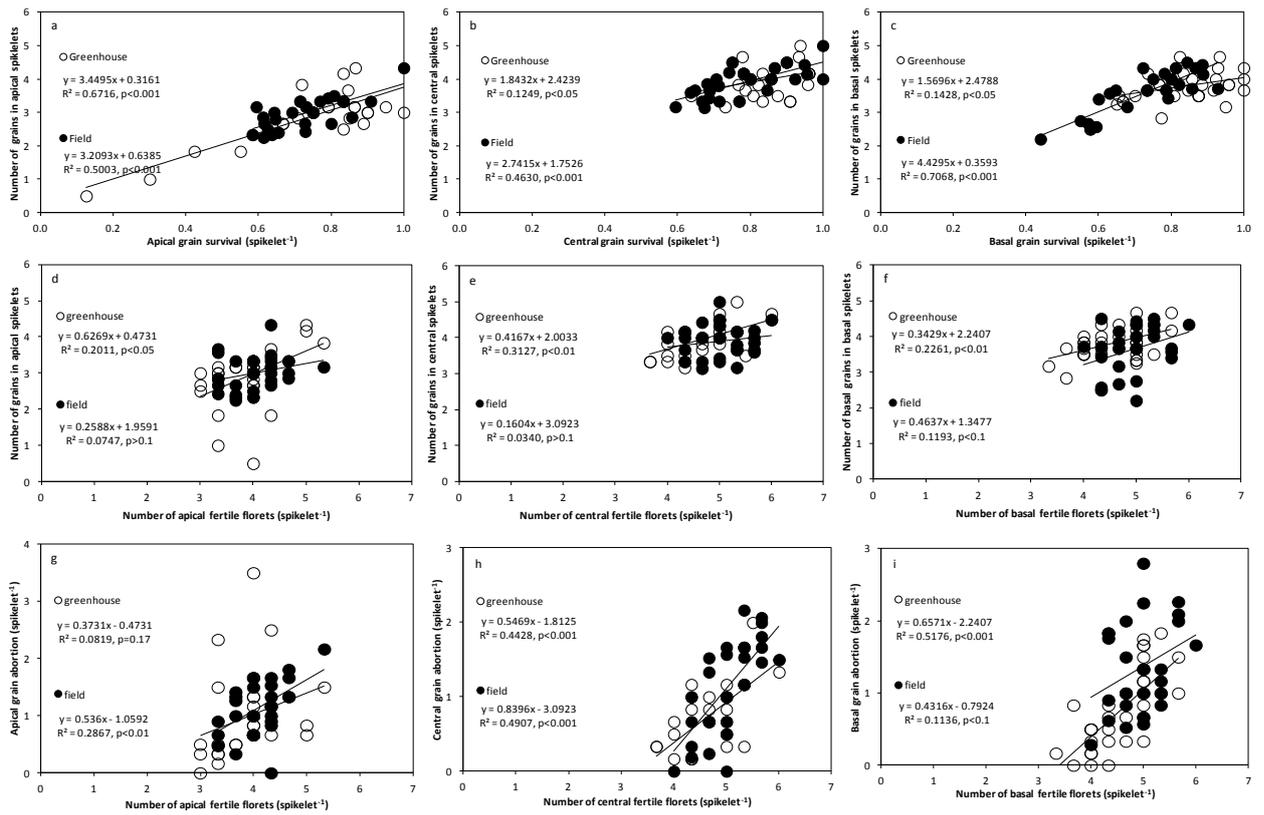

Fig. S5. Relationship between maximum number of fertile florets, number of grains and grain abortion per spikelet in apical, central and basal positions of spike under field and greenhouse conditions.
