

**Transfection efficiency FITC-labelled siRNA GL2 and of pEGFP.** At the end of transfection by FITC-labeled siGL2 (220 nM), FITC labelled cells were photographed (A-B) and the amount (E) quantified by flow cytometry (data are expressed as mean  $\pm$  SD, n = 4). 24 hours after transfection by pEGFP, EGFP labelled cells were photographed (C-D) and the amount (E) quantified by flow cytometry (data are expressed as mean  $\pm$  SD, n = 4). Overexpression of E2F1 by pE2F1 is shown by western blotting (F) in comparison to non transfected cells (NT).
