

Supplementary Figure S3. Anterior segment transgene expression after AAV7m8 delivery in the mouse. Anterior segment structures: iris pigmented epithelium of the iris and ciliary processes are transduced (*green*) post IVI with AAV7m8-CMV/CBA-eGFP at $1e + 9$ vg. Shown are results from two different mice (**a** and **b**). DAPI-stained nuclei are shown in *magenta*. Scale bars represent $50 \mu\text{m}$.
