

Supplementary Figure S3. Nuclear staining for experiments. (a) Nuclear staining (DAPI) of images from the slug assay (Fig. 2), (b) 5 minute incubation with decontamination solutions, and (c) 30 minute incubation with decontamination solutions (Fig. 4). After fixation, cells were stained in PBS solution with 0.1% TritonX-100 and 10ug/mL DAPI for 10 minutes. Cells were rinsed 2 times in PBS for 5 minutes each then imaged. Scale bar = 100 um
