

Supplementary Information

Supplementary Figure 1

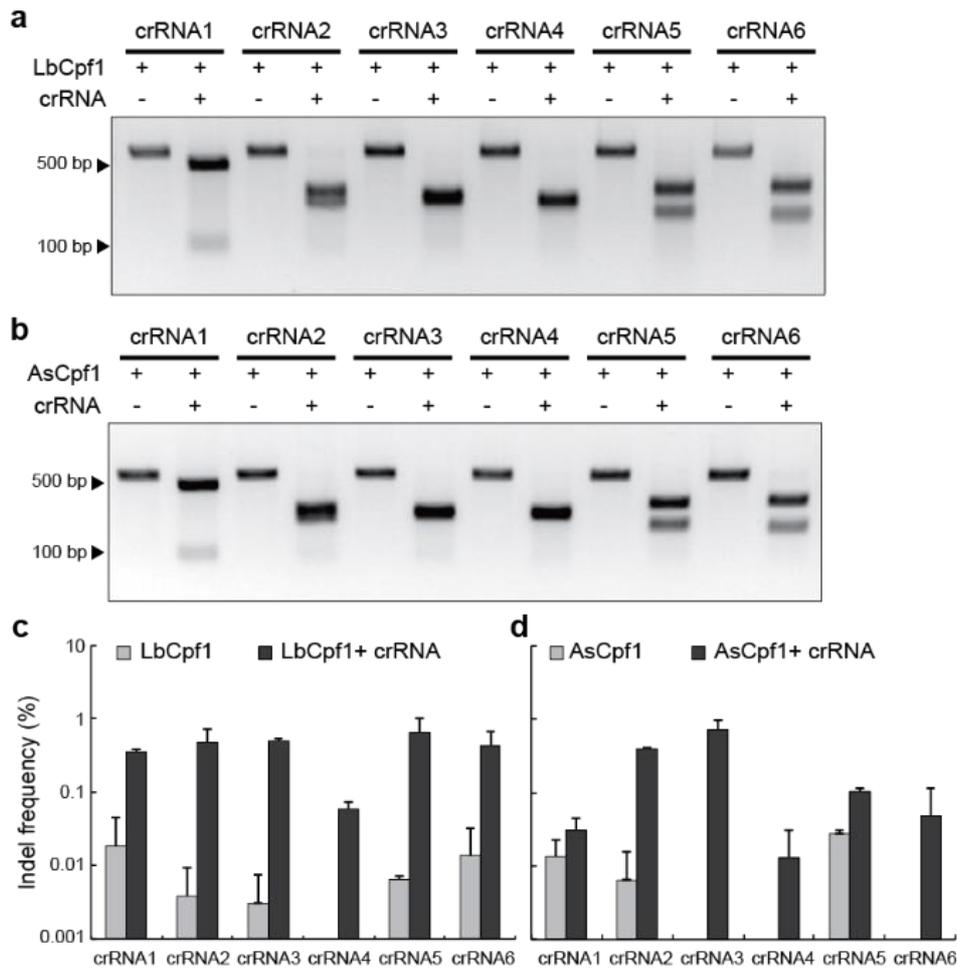

Supplementary Figure 1. *In vitro* cleavage assay for 9 crRNA-LbCpf1 complexes and localization of Cpf1 proteins in soybean protoplasts. (a) Preassembled AsCpf1-crRNA and LbCpf1-crRNA complexes cleave their target DNA *in vitro*. (b) Both Cy3-conjugated Cpf1 proteins were targeted to the nucleus of soybean protoplasts. The red arrow indicates the nucleus. DAPI, a nuclear marker. Bars = 10 μ m.

Supplementary Figure 2

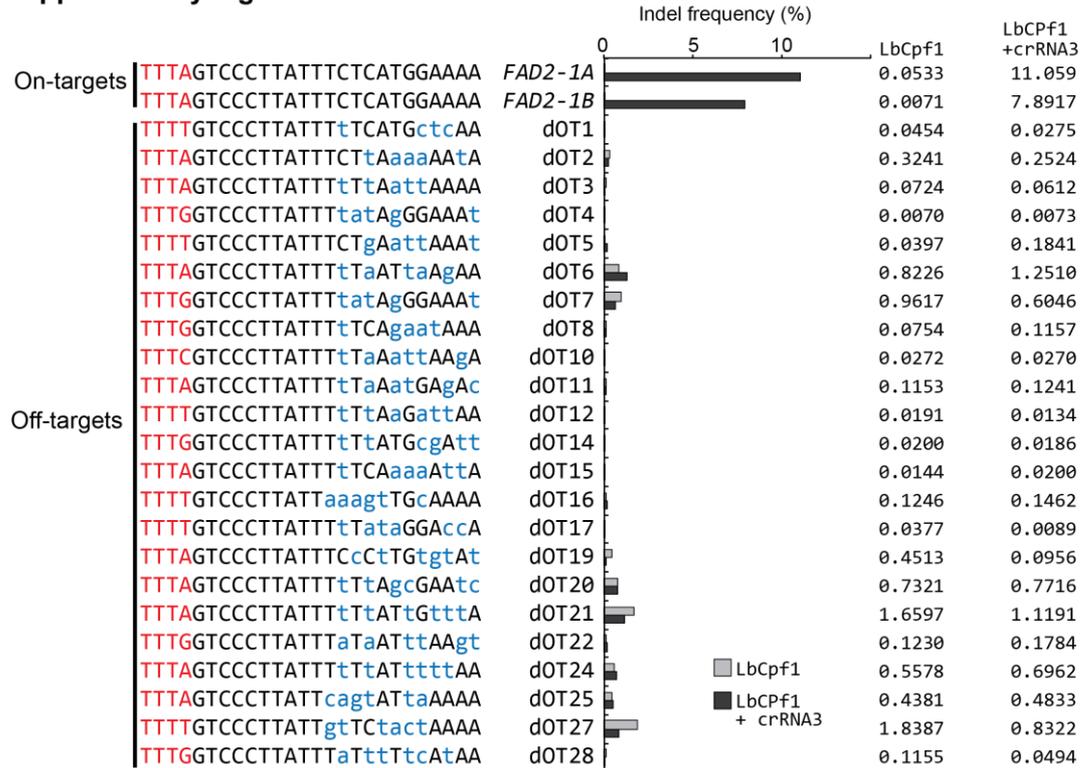

Supplementary Figure 2. Indel frequencies (%; Log₁₀ scale at Y-axis) for 9 crRNAs at target sites in *FAD2-1A* and *FAD2-1B*. Error bars represent standard deviation (n = 2).

Supplementary Figure 3

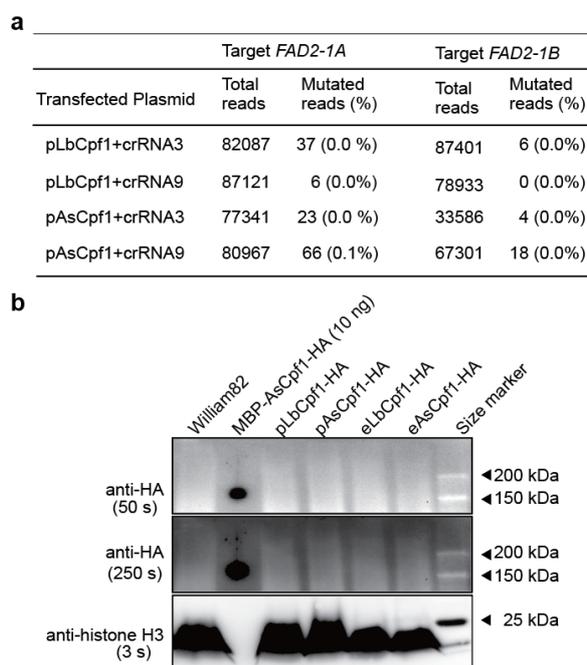

Supplementary Figure 3. CRISPR/Cpf1-mediated editing of the *AOC* gene in *Nicotiana attenuata* protoplasts. *In vitro* cleavage assay for 6 crRNAs complexed with (a) LbCpf1 and (b) AsCpf1 proteins. Indel frequencies (%; Log₁₀ scale at Y-axis) at the target sites in protoplasts for 6 crRNAs complexed with (c) LbCpf1 and (d) AsCpf1 proteins. *AOC*, *ALLEN OXIDE CYCLASE*. Error bars represent standard deviation (n = 2).

Supplementary Figure 4

Supplementary Figure 4. *In vivo* evaluation of LbCpf1-crRNA3 activity at potential off-target sites in the genome. The indel frequencies (%) at 23 candidate distal off-target (dOT) sites (with up to 6 bp mismatches relative to the crRNAs) were measured and validated in LbCpf1-crRNA3-delivered soybean protoplasts by targeted deep sequencing. No mutations were detected at any of the 23 candidate loci. Red, PAM sequences; blue, mismatched nucleotide bases. Note, dOT21 and dOT27 have relatively high frequency of indel in some control samples, which we have frequently seen in AT-rich and A- or T-repeat regions¹²

Supplementary Figure 5

Supplementary Figure 5. Editing activity of plasmid-expressed Cpf1 and Cpf1 expression in soybean protoplasts. (a) Indel frequencies (%) at two *FAD2* loci after transformation with the plasmid harboring plant-codon optimized LbCpf1-HA or AsCpf1-HA. (b) Protein expression from a plant codon (pLbCpf1/pAsCpf1) or *E. coli* codon (eLbCpf1/eAsCpf1) optimized Cpf1 plasmid in soybean protoplasts. The anti-HA antibody detects the Cpf1 protein and the anti-histone H3 antibody detects an endogenous soybean protein.

Supplementary Table 1. List of crRNAs used in this study.
