O,oligodendrolioma; OA, oligoastrocytoma

Supplementary Table S3. Molecular markers used for differentiation of gliogenesis lineage in this study

Technique	Astrocytic lineage	oligodendroglial lineage
Immunohistochemistry	p53, ATRX	PDGFRA
Direct sequencing	<i>TP53</i>	<i>TERT</i>
FISH		1p/19q

Supplementary Figure S1. Correlation between clinicopathological and molecular variables of 1p/19q intact oligodendroglial tumors. Patients with classic oligodendroglial histology were significantly older than those with mixed oligoastrocytic histology when excluding paediatric cases ($p=0.023$) **a.** 1p/19q intact oligodendroglial tumors with classic oligodendroglial histology showed frequent *IDH* mutation (67.4%) **b.** Distribution of p53 positivity **c.** and ATRX positivity **d.** in 1p/19q non-codeleted oligodendroglial tumors according to histology. ATRX expression and *TERTp* mutation were mutually exclusive in all but one case among 1p/19q non-codeleted oligoastrocytomas **e.**
