

## The association analysis of *hOGG1* genetic variants and gastric cancer risk in a Chinese population

### SUPPLEMENTARY FIGURE AND TABLES

**Supplementary Figure S1: Association between rs125701 polymorphism and the expression levels of *hOGG1* mRNA from The Cancer Genome Atlas database.** There was no significant difference between SNP rs125701 and mRNA expression of *hOGG1* in both gastric cancer patients and cancer-free controls ( $P = 0.541$  and 0.371, respectively).

**Supplementary Table S1: Frequency distributions of selected variables between the gastric cancer cases and controls**

| Variables             | Cases (n=1275) |      | Controls (n=1436) |      | P <sup>a</sup> |
|-----------------------|----------------|------|-------------------|------|----------------|
