

Supplementary Fig. 1. Clinical implications of AC histology in locally advanced cervical cancer patients. Kaplan-Meier estimates of survival according to the histological subtype. (A) PFS and OS (all patients; SCC, n=225; AC, n=23). (B) PFFS and DMFS (all patients; SCC, n=225; AC, n=23).

AC, adenocarcinoma; DMFS, distant metastasis-free survival; OS, overall survival; PFFS, pelvic failure-free survival; PFS, progression-free survival; SCC, squamous cell carcinoma.
