

Fig. S1 Plot of natural-logged sown seed mass and harvested seed mass for all species in the Yield experiment 1. Each point shows a different species. $R^2 = 0.97$, $P < 0.0001$. The blue line shows the 1:1 line.

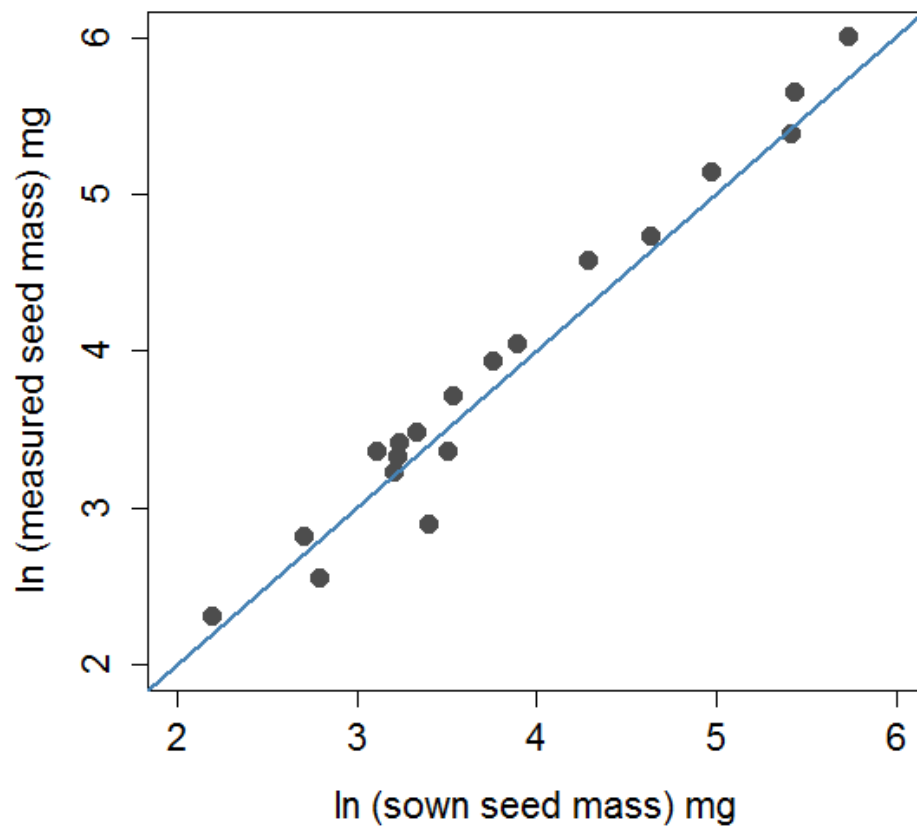

Fig. S2 Plots of fitted curves for logged (ln) biomass over time for species in the growth analysis experiment. Grey line shows model mean and blue lines show fit for each species.
