

# Spread and Evolution of Respiratory Syncytial Virus A Genotype ON1 Coastal Kenya, 2010–2015

## Technical Appendix

**Technical Appendix Table 1.** Frequency of LRTI inpatient cases, samples tested, total RSV and RSV-A cases, and number sequenced over five successive epidemics in Kilifi, Kenya\*

Epidemic season*	No. LRTI eligible cases	No. (%) samples tested†	No. (%)‡ RSV-positive samples	No. (%)§ RSV-A samples	No. (%) RSV-A sequences#	No. (%)¶ ON1 sequences	No. (%)   GA2 sequences
2014/2015	876	866 (98.9)	203 (23.4)	133 (65.5)	128	123 (96.1)	5 (3.9)
2013/2014	722	576 (79.8)	124 (21.5)	74 (59.7)	68	58 (85.3)	10 (14.7)
2012/2013	659	563 (85.4)	142 (25.2)	107 (75.4)	87	71 (81.6)	16 (18.4)
2011/2012	814	718 (88.2)	151 (21.0)	54 (35.8)	46	31 (67.4)	15 (32.6)
2010/2011	939	838 (89.2)	261 (31.1)	232 (88.9)	154	0 (0)	154 (100)
Total	4,010	3,561 (88.8)	881 (24.7)	600 (68.1)	483	283 (58.6)	200 (41.4)

\*Epidemic designated 1st September of one year to 31st August of the following year. RSV, respiratory syncytial virus; LRTI, lower respiratory tract infection.

†As a proportion of the eligible LRTI inpatient cases.

‡As a proportion of the samples tested.

§As a proportion of the RSV positive samples.

#Includes 41 sequences from IFAT/PCR negative or mild pneumonia cases.

¶As a proportion of the RSV-A sequences.

**Technical Appendix Table 2.** Nucleotide and amino acid variability in RSV-A genotypes identified in Kilifi, Kenya, 2010/2011 to 2014/2015

Epidemic season*	All RSV-A		ON1		GA2	
	Nucleotide	Amino acid	Nucleotide	Amino acid	Nucleotide	Amino acid
2014/2015	0.88	1.40	0.68	1.10	2.02	4.12
2013/2014	1.24	2.07	0.55	0.75	1.72	3.29
2012/2013	1.21	2.14	0.46	0.58	1.69	3.13
2011/2012	1.45	2.99	0.43	1.02	1.56	2.91
2010/2011	0.66	0.99	—	—	0.66	0.99
Total	2.04	3.41	0.85	1.23	1.01	1.71

\*Epidemic designated from September 1 of 1 year to August 31 of the following year. RSV, respiratory syncytial virus.

**Technical Appendix Table 3.** Frequency of global genotypes BA and ON1 variants detected, by calendar year, from sequences deposited in Genbank\*

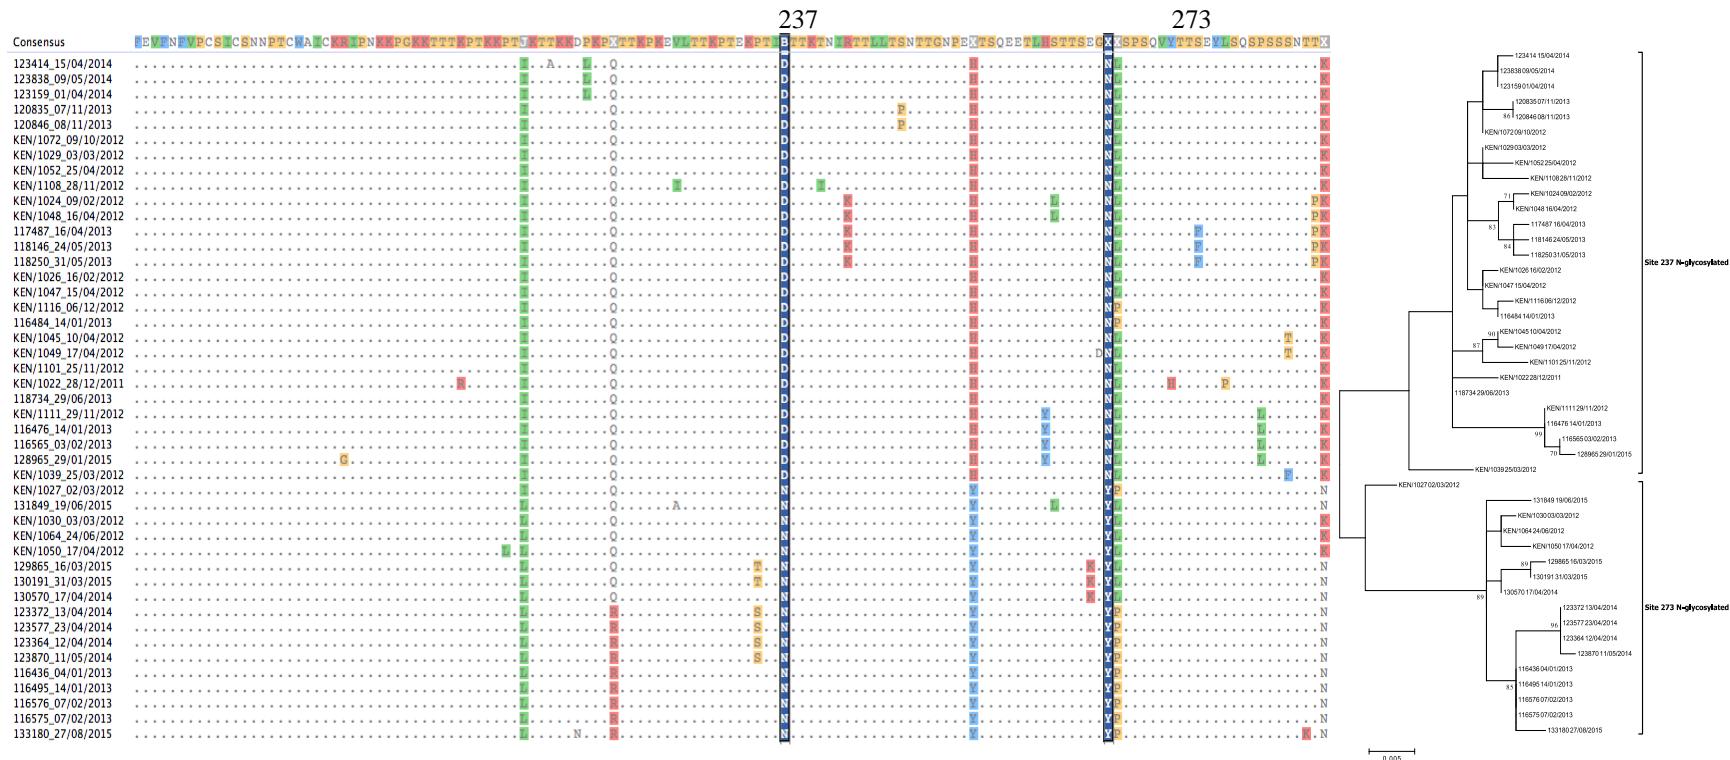

Year	BA			ON1			
	Variants	Sequences	Countries	Year	Variants	Sequences	Countries
1998	2	4	2	2010	1	5	2
1999	3	11	4	2011	8	57	7
2000	2	2	1	2012	78	368	19
2001	6	23	4	2013	153	432	15
2002	20	51	9	2014	59	256	8
2003	30	60	10	2015	10	81	2
2004	30	144	12				
2005	82	290	13				
2006	101	205	16				

Data extracted from GenBank on January 19, 2016, length 241 to 687 bases.

**Technical Appendix Table 4.** Frequency of genotypes BA and ON1 variants, by calendar year, detected from countries around the world. Sequences deposited in Genbank by the respective countries were used\*

Genotype	Country	Year and variants					
		2010	2011	2012	2013	2014	2015
ON1	Philippines	—	—	7	29	—	—
	Germany	—	—	5	26	—	—
	Japan	—	—	5	9	7	1
	Spain	—	—	5	7	14	—
BA		1999	2000	2001	2002	2003	2004
	Belgium	2	—	5	5	5	8
	Argentina	1	—	—	6	8	5
	Japan	—	—	1	2	4	3
							9
							6

\*Data extracted from GenBank on January 19, 2016, length 241 to 687 bases. —, not available.

**Technical Appendix Figure 1.** An amino acid alignment and a maximum likelihood ML tree highlighting the 2 codon sites (237 and 273) on the G protein that define 2 groups of GA2 viruses based on *N*-glycosylation patterns. Samples are from Kilifi County Hospital patients, ages 1 day to >5 years, 2012–2015. Scale bar indicates nucleotide substitutions per site.

**Technical Appendix Figure 2.** Amino acid substitutions in respiratory syncytial virus A (RSV-A) G protein for sequences isolated in Kilifi Kenya from season 2011/2012 to 2014/2015. All unique protein sequences per epidemic were collated, aligned and the amino acid differences from the earliest sequence determined and marked with vertical colored bars, with the substituted amino acid residue color coded as shown by the key between panels A and B. A) Full aligned aa sequence inferred from the G gene sequences (ON1 and GA2); B) (ON1 only) focuses on the region

Publisher: CDC; Journal: Emerging Infectious Diseases

Article Type: Research; Volume: 23; Issue: 2; Year: 2017; Article ID: 16-1149

DOI: 10.3201/eid2302.161149; TOC Head: Research

of the ON1 duplication. The positions shown at the bottom of panels A and B are relative to the first amino acid of the regions analyzed, i.e., from amino acid positions 94 and 260, respectively, of the reference strain A2 (Ref: M74568). Indicated at the top of these panels are the functional domains of the G protein (panel A) and the 72-nt duplication of genotype ON1 (panel B; duplicated sequence I in “orange” and duplicated sequence II in “purple”). Below this, the histogram indicates the total number of changes at each position. C) Concurrent aa positions within the duplicated sequences I and II, and the respective aa substitutions (numbering similar to positions in panel B).
