

Loss of Par3 promotes lung adenocarcinoma metastasis through 14-3-3 ζ protein

SUPPLEMENTARY FIGURES

Supplementary Figure 1: Validation of negative control in A549 and H1299 cells by immunofluorescent staining. Negative group incubated with no primary antibody but with a goat anti-rabbit secondary antibody. Positive group incubated with Par3 antibody. Bars: 25 μ m.

Supplementary Figure 2: Tumor angiogenesis was assessed with IF staining using an antibody against CD31. Bars: 25 μ m. All quantitative data are shown in the right panel. * $P < 0.05$, ** $P < 0.01$.

Supplementary Figure 3: Western blot analysis of 14-3-3 ζ expression in A549 and H1299 cells.
