

## Supplementary Figure 1

Supp. Figure 1: Detection of P27 protein coated to polystyrene beads. Image shows the immunoblots from the polystyrene beads coated with bovine serum proteins (Serum), a pool of proteins of *M. smegmatis* (Ms ProtPool) or P27 protein of *M. smegmatis* (Ms P27). Adsorption of P27 to the polystyrene beads was detected using polyclonal anti-P27 antibody.
