

Figure S4 The dorsal imperfections in *net1* morphants are not resulted from MO injection-induced developmental delay. (A) The expression patterns of prechordal plate marker gene *gsc* (dorsal view with anterior to the left) and forebrain marker gene *six3* (dorsal view with anterior at the top) in *net1* morphants at bud stage. (B) The expression of *ntl* (red) and *myod1* (blue) in six-somite stage embryos injected with cMO or *net1* MO1. Dorsal view, anterior is upward.
