

Figure S7 Zebrafish *net1* expression is not regulated by Wnt/ β -catenin signaling. (A) The expression of *chd*, a well-known Wnt/ β -catenin signal responsive gene, in sphere stage embryos injected with 10 pg *wnt8a* mRNA, 50 pg ΔN - β -catenin mRNA and 100 pg ΔN -*tcf3* mRNA, respectively. (B) The expression of *net1* in 30%-epiboly stage embryos injected with indicated mRNAs. UIC, uninjected control. Note that the expression of *net1* was not changed by either activation or inhibition of Wnt/ β -catenin signaling.
