

Supplemental Figure S7: Confirming rDNA copy number of 5S types by quantitative real-time PCR.
 A: Quantitative real-time PCR on egg DNA using the indicated specific PCR primer sets.
 B: Quantitative real-time PCR on whole-body male-adult DNA using the indicated specific PCR primer sets.
 The ΔR_n value is the R_n (normalized reporter) value of the reaction minus the R_n value of the baseline signal generated by the instrument.
