

A strong host response and lack of MYC expression are characteristic for diffuse large B cell lymphoma transformed from nodular lymphocyte predominant Hodgkin lymphoma

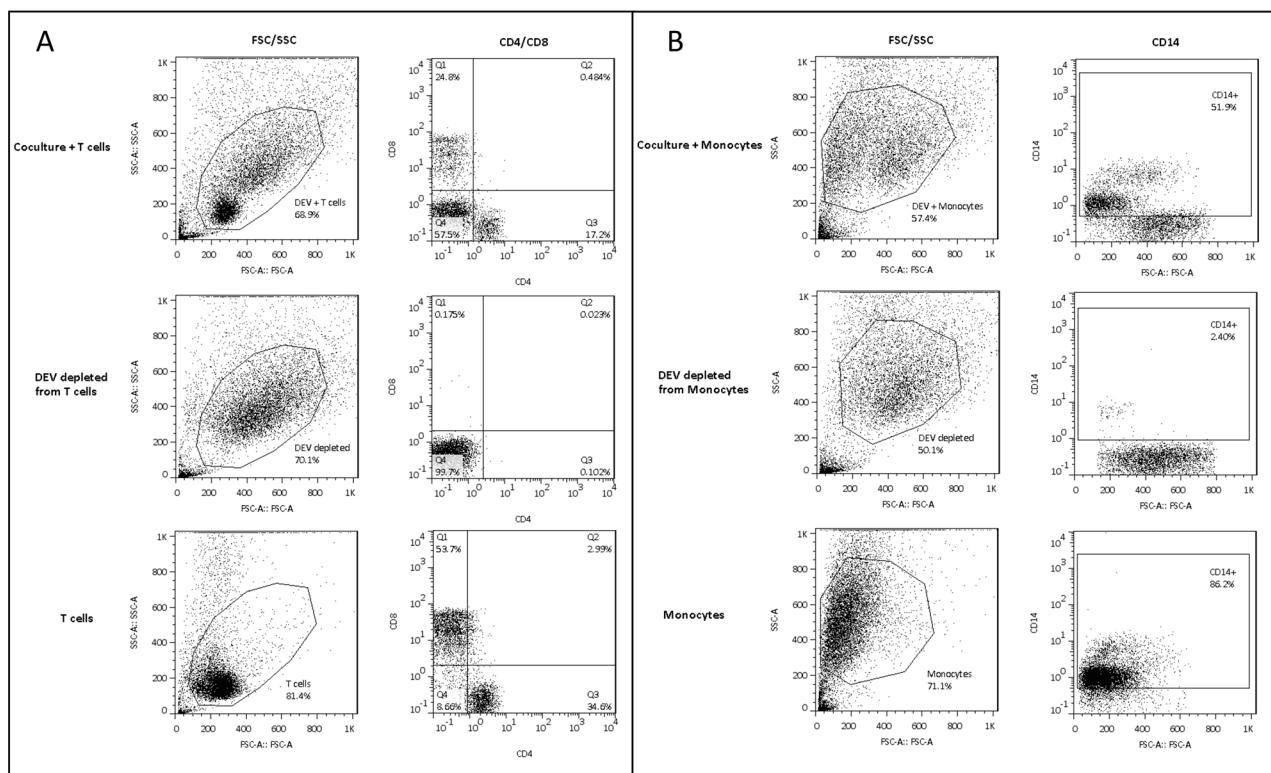

SUPPLEMENTARY FIGURES AND TABLES

Flow cytometry analysis of MHC class I (upper panel) and MHC class II (lower panel) in KM-H2 cHL cells and DEV cells showing unstained cells (grey histogram) compared to cells stained for MHC class I or -class II (white histogram with solid black line).

Supplementary Figure S2: Expression of T cell, B cell and monocyte/macrophage antigens in DEV cells and DEV cells after coculture with T cells and monocytes.

Supplementary Figure S3: DEV cells in coculture, after depletion of bystander cells, and depleted fraction. A. Coculture with T cells **B.** Coculture with monocytes. Efficient depletion of T cells (A) or monocytes (B) from cocultures with DEV cells by MACS. Flow cytometry analysis of CD4- and CD8-positive T cells or CD14-positive monocytes in coculture with DEV cells (upper panel), DEV cells purified from T cells or monocytes (middle panel) and T cell- or monocyte fractions depleted from cocultures (lower panel).
