

Nucleoside 5'-O-monophosphorothioates as modulators of the P2Y14 receptor and mast cell degranulation

Supplementary Material

Figure S1

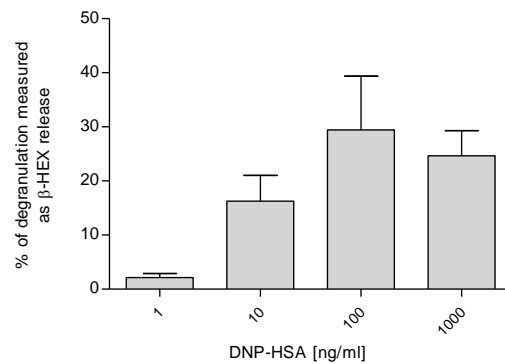

Figure S1: Concentration-dependent influence of DNP-HSA antigen on β -HEX release from RBL-2H3 cells. Mast cells were sensitized for 24 h with DNP-specific IgE antibody (0.5 μ g/ml) and incubated for 20 min with antigen. The spontaneous release (9.5%) was subtracted from the final data. Data represent the means \pm SD from at least three independent experiments.
