

Supplemental Material S2. Neuropsychological characteristics of study participants.

Participant	Type	Picture naming (%)	Nonverbal comp (%)	Word comp (%)	Word rep (%)
P1	TCM	77	92	94	95
P2	A	83	81	95	95
P3	A	78	88	98	94
P4	A	64	96	92	87
PWA group average		75	89	92.9	93.8
Average (controls) ^a		97	98	99	100

Note. Type = aphasia type, where A = anomic, TCM = transcortical motor; picture naming = oral picture naming in percentages (Philadelphia Naming Test; Roach, Schwartz, Martin, Grewal, & Brecher, 1996); nonverbal comp = a picture–picture association test for nonverbal comprehension, in percentages (Howard & Patterson, 1992); word comp = spoken word to picture matching test of comprehension in percentages (Mirman et al., 2010); word rep = a test of immediate word repetition, in percentages (Mirman et al., 2010); PWA = people with aphasia.

^aAverage performance for neurotypical control sample.
