Figure S1. qRT-PCR analysis of *CKB3* (A) and *CKB4* (B) expression under ABA treatment. 10-day-old seedlings were treated with 100 μ M ABA for the indicated times (0, 3, 6, or 12 h).

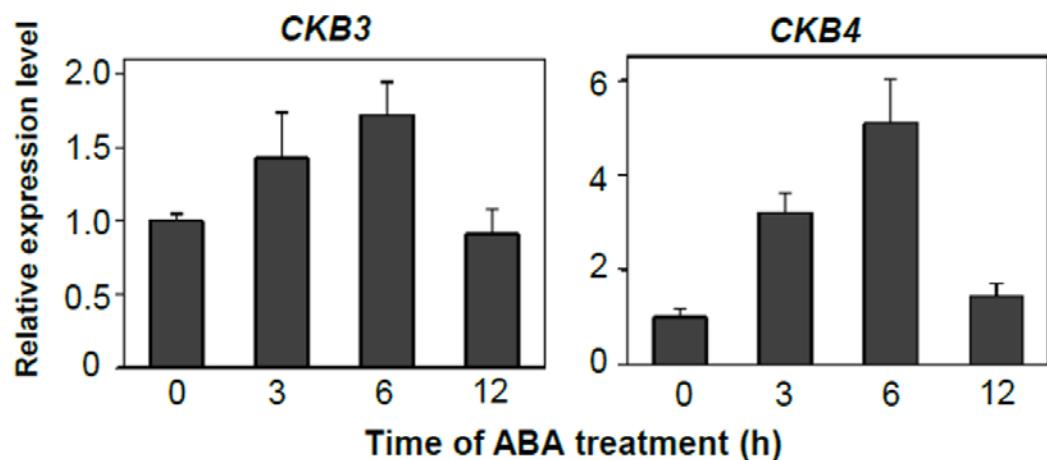

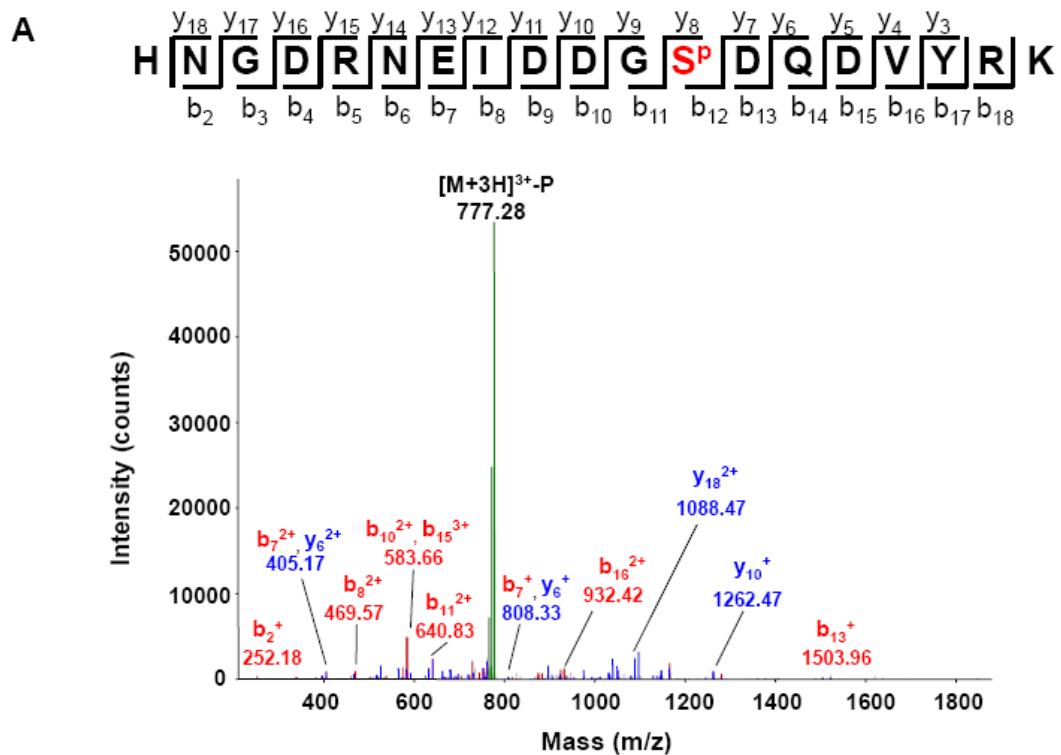

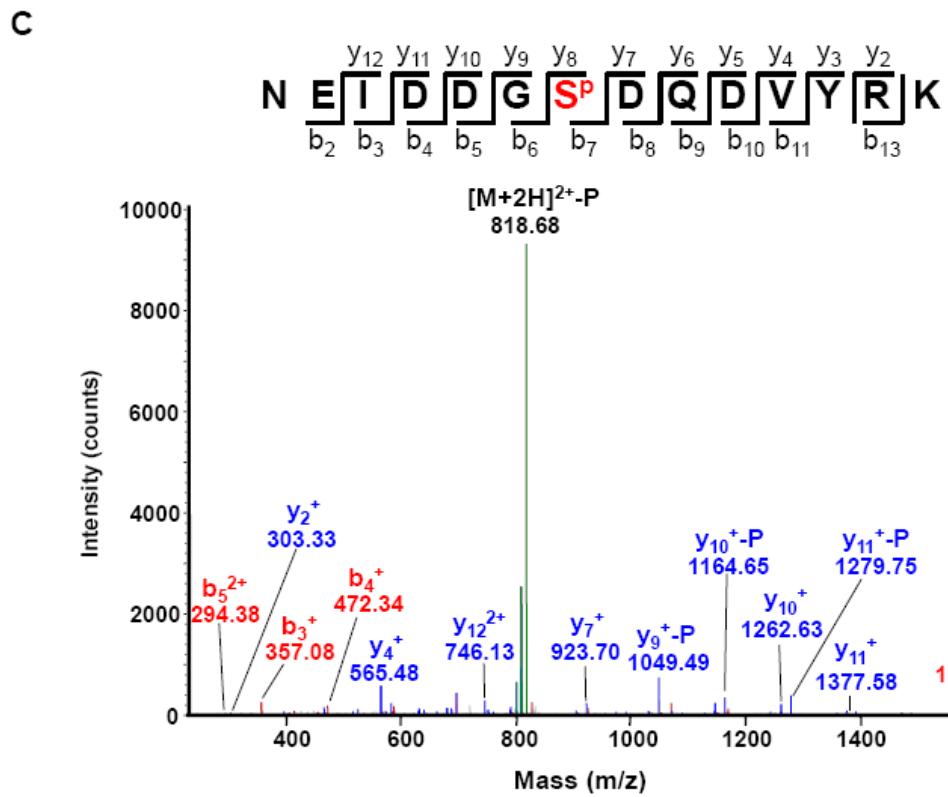

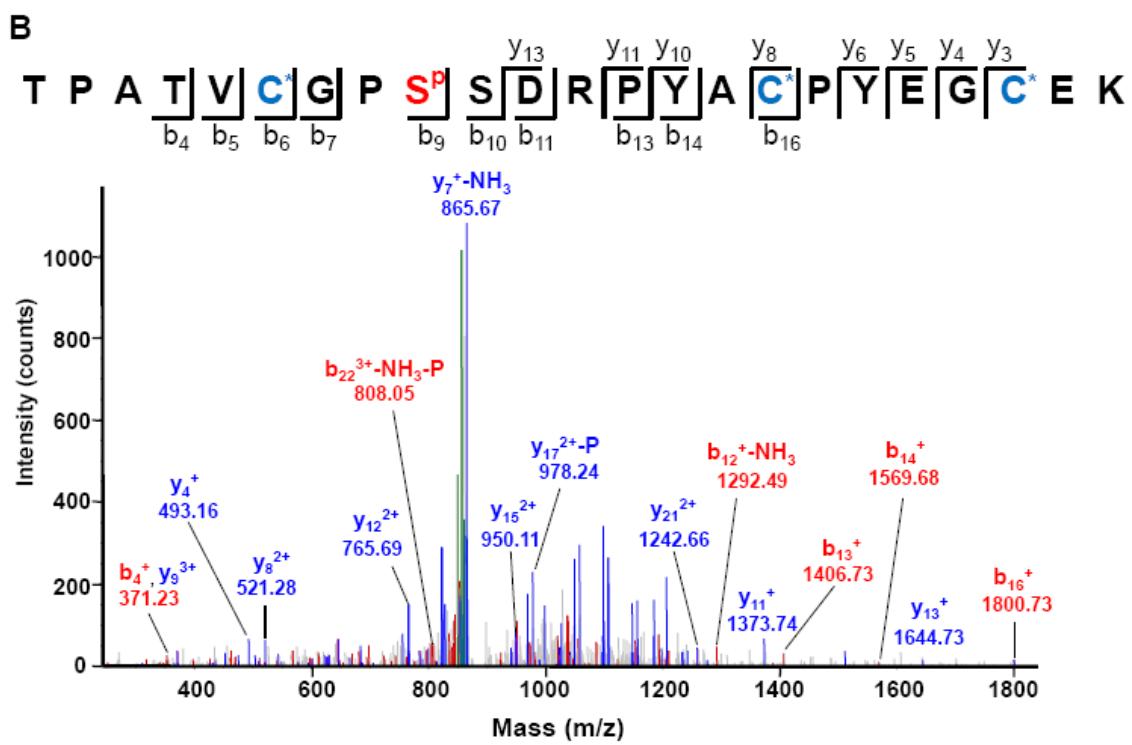

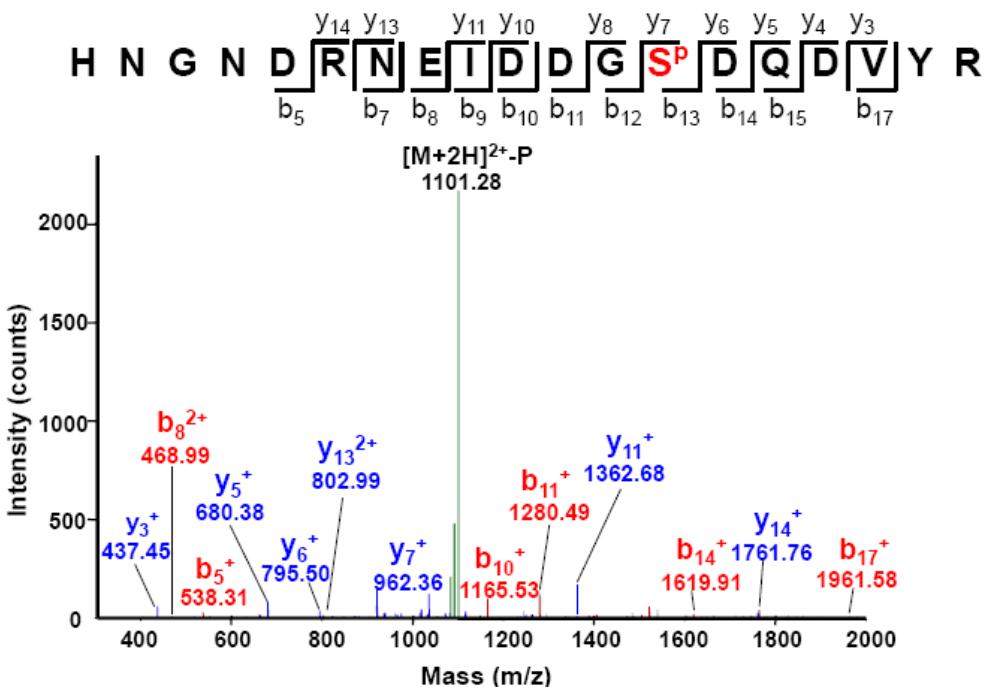

Figure S2. Five phosphorylated AtYY1 peptides were identified using LC-MS/MS after an *in vitro* phosphorylation assay with CKII. The amino acids labeled with a P indicate that the sites are phosphorylated. The fragment ions assigned to both y-ions and b-ions are labeled.

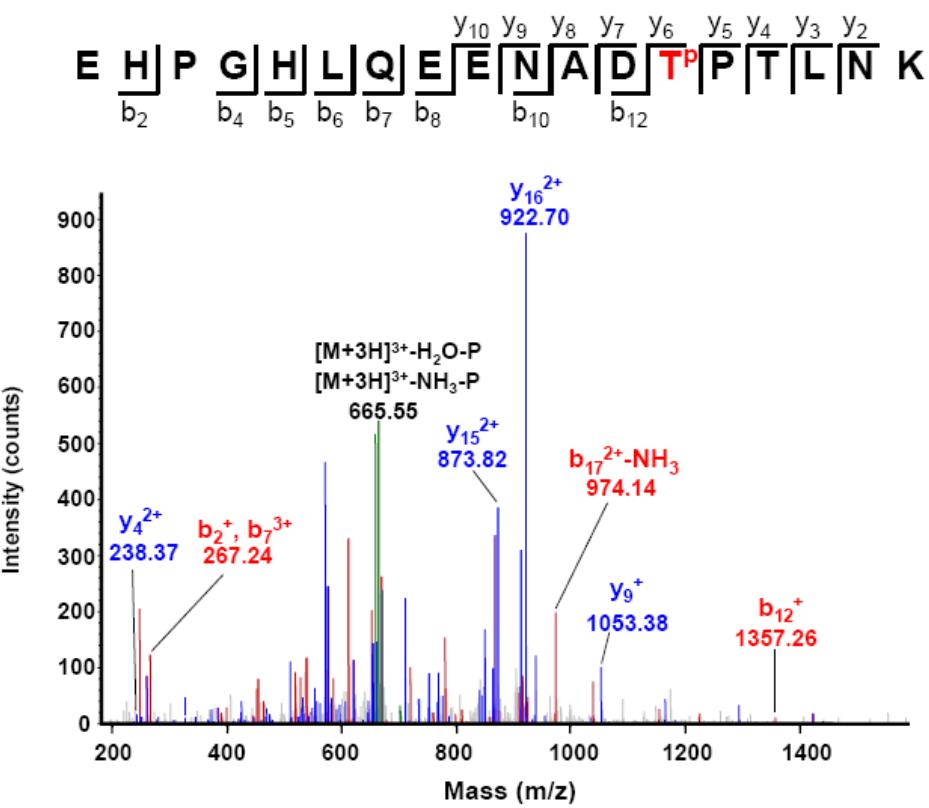

Figure S3. qRT-PCR analysis of *AtYY1* expression in the seedlings of WT, *pAtYY1::S284D*, *pAtYY1::S284D* and *pAtYY1::AtYY1* plants in control conditions.
