Supplementary Figure S1: The expression of *SMO* was analyzed by qRT-PCR in two normal brain tissues (110 and 111), in two regions of the primary tumor (123 and 127) and in two inoculation metastases (166 and 167). After normalization to the housekeeping gene *HPRT1*, the relative quantification value was expressed as $2^{-\Delta\Delta Ct}$. Expression analysis was done in triplicates.

Supplementary Figure S2: The primary tumor a. and a metastasis b. were stained in parallel with a beta-catenin specific antibody.

Supplementary Figure S3: The expression of LEF1 was analyzed by qRT-PCR in two regions of the primary tumor (123, 127) and in two inoculation metastases (166 and 167). After normalization to the housekeeping gene *HPRT1*, the relative quantification value was expressed as $2^{-\Delta Ct}$. Expression analysis was done in triplicates.
