

Supporting Information

S1 Fig 1. Replication of self-administration test using 20% Vitamin E-TPGS/0.9% saline vehicle. After self-administration testing, the highest dose was replicated using a 20% Vitamin E-TPGS/0.9% saline vehicle. (A) No difference was observed on either the total number of active and inactive nosepokes. (B) No alteration to the timecourse of responding was observed. (C) No difference in locomotor activity was observed during the operant session. (D) The timecourse of locomotor activity was also not altered.
