

Dioscin augments HSV-tk-mediated suicide gene therapy for melanoma by promoting connexin-based intercellular communication

Supplementary Materials

Supplementary Figure S1: Body weight of the mice. Mice bearing B16 tumors were randomized into four groups ($n = 14$ mice per group): control, (saline only), GCV only (100 mg/kg•day), dioscin only (50 mg/kg•day), and GCV plus dioscin. Body weight of the mice was measured on day 1 and on day 14, respectively. Data are presented as the mean \pm standard deviation.
